Violations

Violation Date: 01/30/2017
Violation Source: CERS
Violation Program: HW
Violation Division: San Luis Obispo County Environmental Health
Citation: 40 CFR 1 265.171 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.171
Violation Notes:

Returned to compliance on 02/06/2017. Not all hazwaste containers have proper labels - please fill in all fields on labels and place on each tank or drum holding hazwaste.

Violation Description:

Failure to accumulate hazardous waste in a container that is in good condition.

Violations

Violation Date: 01/30/2017
Violation Source: CERS
Violation Program: HW
Violation Division: San Luis Obispo County Environmental Health
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Notes:

Returned to compliance on 02/06/2017. EPA ID Number is pending, but the old number was used to ship hazwaste today even though the facility has new ownership as of November 2016.

Violation Description:

Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violations

Violation Date: 10/27/2014
Violation Source: CERS
Violation Program: HW
Violation Division: San Luis Obispo County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 10/27/2014. Waste antifreeze label posted but all facility information faded. Label refreshed during site visit, violation corrected same day.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Evaluations

Eval Date: 01/08/2016
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Hazardous Materials Business Plan has been updated and submitted for CY 2016. Facility in good order. Hazwaste containers properly labeled, record keeping well maintained. No violations noted during facility inspection.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

New ownership effective Nov. 2016 - a new Hazardous Materials Business Plan was due no later than date of ownership transfer. Submittal via CERS database is due no later than Friday February 3, 2017.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 01/30/2017
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

A new company has purchased this business, the old EPA ID Number will be abandoned (closed) and a new one is pending. Transfer of ownership occured at the end of November 2016. Please call me with new EPA ID Number when it is received (805) 781-7383. Place fully completed hazardous waste labels on all waste drums and tanks. Some labels are faded not legible. NOTE: Waste oil and waste oil filters were shipped using the old EPA ID Number on January 30, 2017 - this is illegal and no further shipment of hazardous waste can be done from the facility until the new EPA ID Number is

issued by the Dept. of Toxic Substances Control, and is posted on site and listed on all hazwaste labels.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/27/2014

LUST Sites from GeoTracker Search - Cleanup Action Report (as of Feb 24, 2020)

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:***
Phase: Water, Soil ***End Date:***
Contaminant Mass Removed:
Description: 4/28/2009: Approved CAP to be implemented, but it has not been implemented yet.

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:*** 5/2/2005
Phase: Water ***End Date:*** 7/7/2008
Contaminant Mass Removed:
Description: Biosparging trench system startup; increase flow to 25 cfm 10/06. "The rate of contaminant reduction after initiation of the biosparging system appears most effective for the constituents MTBE and TPH diesel. Remediation has been sluggish because access to approximately 95% of the contamination is limited or unavailable due to its location beneath state Highway 227. The biosparging treatment has been discontinued because the State Water Resources Control Board has indicated the system is not achieving contaminant reductions in a sufficient timeframe."

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:*** 11/15/2002
Phase: Water, Other (See Description) ***End Date:***
Contaminant Mass Removed:
Description: November of 2002 a vacuum extraction procedure was performed on wells MW-1, MW-2, MW-3r, MW-6, MW-7, MW-11 and MW-12. See report dated 2/11/2003. The wells were vacuumed on 11/22/02; 12/2, 6, 11 and 18, 2002. Vacuum intervals averaged 44 minutes per well and liquid recovery was approximately 110 gallons per day (estimated volume of groundwater in the pipe and well bores was 43 gallons and the volume recovered from the sediments and bedrock was approximately 67 gallons).

Action Type: EXCAVATION ***Begin Date:*** 3/15/1999

Phase: Soil, Water ***End Date:***
Contaminant Mass Removed:
Description: Soil disposed of at McKittrick Waste Treat. Gas & diesel contaminated groundwater was pumped from the UST excavation. See the report dated March 30, 1999

Action Type: OTHER (USE DESCRIPTION FIELD) ***Begin Date:*** 3/15/1999
Phase: Water ***End Date:*** 3/16/1999
Contaminant Mass Removed:
Description: Gas & diesel contaminated groundwater was pumped from the UST excavation. See the report dated March 30, 1999

Action Type: EXCAVATION ***Begin Date:*** 4/12/1989
Phase: Soil ***End Date:***
Contaminant Mass Removed:
Description: 1000+ gals of product & groundwater was pumped from the UST excavation.

Title Description Comments:

- Initiation of the site's CAP dated February 9, 2009 will begin near the beginning of the 2nd quarter 2014. Follow up groundwater sampling will be obtained from MW-1, MW-2 and MW-3r and tested for TPH diesel and gasoline, B, T, E, X, MTBE and TBA at approximately 1 and 2 months following the Klozur CR injection

Action Type: Response Requested - Reports
Action Date: *8/30/2013
Received Issue Date: 8/30/2013
Action: Final Remedial Action Report / Corrective Action Report - Regulator Responded

Doc Link:
Title Description Comments:

REMEDIAL ACTION IMPLEMENTATION REPORT - Extension requested until 8/30/13., See earlier Final Remedial/CAP Rpt due date requirement and notes.

Action Type: Response Requested - Reports
Action Date: *5/15/2013
Received Issue Date: 1/15/2009
Action: Final Remedial Action Report / Corrective Action Report
Doc Link: https://geotracker.waterboards.ca.gov/view_documents_all?global_id=T0607900138&doc_id=5638056
Title Description Comments:

- Corrective Action Implementation Report, Extension Request until 4/30/10 and RECs: Injections (chem oxidants) be performed between Jan-March/09. Baseline sampling during 3Q/09?, Status: Will proceed w/ injections (chem oxidants)?. Baseline sampling still pending., 4/20: CG anticipates CAP implemen 1Q/12., Consultant (Leo F) not been able to obtain financing for the injection Oxy chemicals, but have found a HVDPE company that will wait for the State payment. Will sent a revised CAP., RP unable to cover cost ($200,000) for proposed cleanup action, causing delays in implementing the CAP. Consultant requests: a reduced monitoring frequency to semiannually; implement CAP 2/11; and re-start biosparging system. Waiver request data (baseline) to be submitted by 9/15/10, and soil vapor study discussed in the recent phone conversation will be "further evaluated.", REC: "...for cost purposes that the initial injections be performed in three intervals, with the onsite injection performed during the first interval.", USTCF has assigned a budget for FY 2012-13. First injections of the strong chemical oxidizing solution is proposed during the high groundwater level, anticipated around February and March. Report extension requested until 4/30/2013., Leo F.-Provided baseline groundwater data and a work plan necessary to obtain a NOA regarding the site's requested General Waiver. Baseline groundwater analyses for three monitoring wells that are represented by the up-gradient well MW-8, the down gradient well MW-12, and well MW-1 within the plume (Table 3 GW 2). Revise due date to mid-May. Collect current Waiver Baseline data along with pre-treatment Quarterly Mointoiring data.

Action Type: Response Requested - Reports

MRP NO.96-09

Action Type: Cleanup Action
Action Date: 5/2/2005
Received Issue Date:
Action: In Situ Physical/Chemical Treatment (other than SVE)
Doc Link:
Title Description Comments:

Biosparging trench system startup; increase flow to 25 cfm 10/06. "The rate of contaminant reduction after initiation of the biosparging system appears most effective for the constituents MTBE and TPH diesel. Remediation has been sluggish because access to approximately 95% of the contamination is limited or unavailable due to its location beneath state Highway 227. The biosparging treatment has been discontinued because the State Water Resources Control Board has indicated the system is not achieving contaminant reductions in a sufficient timeframe."

4/28/2009: Approved CAP to be implemented, but it has not been implemented yet.

Action Type: Response Requested - Reports
Action Date: 1/20/2011
Received Issue Date:
Action: Monitoring Report - Quarterly
Doc Link:
Title Description Comments:

- No sampling, RP requested reduction to semi-annual until CAP is implemented.

Action Type: Response Requested - Reports
Action Date: 7/20/2010
Received Issue Date:
Action: Monitoring Report - Quarterly
Doc Link:
Title Description Comments:

- Monitoring Frequency to Q, SA, & A, see Table for frequency., REC: "The 2nd QTR 2010 groundwater monitoring event was not performed. Prior to approval of the CAP, monitoring was performed semiannually, and a change to quarterly was to be instigated to assess the upcoming CAP. Since the CAP was postponed due to reasons noted below, a proposal to only perform semiannual monitoring was submitted to the RWQCB (indicated below) in an effort to reduce fund costs."

Action Type: Cleanup Action
Action Date: 11/15/2002
Received Issue Date:
Action: In Situ Physical/Chemical Treatment (other than SVE)
Doc Link:
Title Description Comments:

November of 2002 a vacuum extraction procedure was performed on wells MW-1, MW-2, MW-3r, MW-6, MW-7, MW-11 and MW-12. See report dated 2/11/2003. The wells were vacuumed on 11/22/02; 12/2, 6, 11 and 18, 2002. Vacuum intervals averaged 44 minutes per well and liquid recovery was approximately 110 gallons per day (estimated volume of groundwater in the pipe and well bores was 43 gallons and the volume recovered from the sediments and bedrock was approximately 67 gallons).

Action Type: Cleanup Action
Action Date: 3/15/1999
Received Issue Date:
Action: Excavation

EI ID: 10437790
EI Description: Chemical Storage Facilities

Violations

Violation Date: 10/06/2015 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** San Luis Obispo County Environmental Health
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Notes:

Returned to compliance on 10/06/2015. Diesel Line Leak Detector failed, was replaced and re-tested and passed test. Violation corrected same day during testing. Facility in full compliance.

Violation Description:

Failure of the pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs.

Violations

Violation Date: 10/04/2018 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** San Luis Obispo County Environmental Health
Citation: HSC 6.7 25290.1(c),25290.2(c),25291(a)(2),2529.1(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c),25290.2(c),25291(a)(2),2529.1(e)
Violation Notes:

Returned to compliance on 11/21/2018.

Violation Description:

Failure to maintain secondary containment (e.g., failure of secondary containment testing).

Evaluations

Eval Date: 12/04/2018
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

On site to witness re-test of failed piping transition sump for SB 989 testing purposes. Test passed and now all required testing for SB 989 has been completed successfully. Facility is in full compliance, no other requirements.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/04/2013
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

Annual monitoring system certification - all sensors tested positive, paperwork in good order. System in full compliance.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/04/2013
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Business Plan submitted via on-line portal. Designated operator paperwork available and current.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/04/2018
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

On site to witness annual Monitoring System certification. All paperwork is in order and available on-site. All tests of leak prevention and leak detection were positive and no problems - facility in full compliance and no violations noted.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/04/2018
Violations Found: Yes
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

On site to witness tri-ennial SB 989 testing of 87, 91, and diesel secondary containment testing. Several failures including: transition piping sump; product piping secondary in 87 turbine sump; product piping secondary in diesel turbine sump. Repairs will be made and then each failed component re-tested with a Fire Dept. Inspector on site to witness the testing. Work to be completed no later than 10/19/2019. All else ok.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/05/2016
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

On site to witness annual UST Monitoring System Certification for 87, 91, & Diesel grade products. All tests successfully completed, no problems noted during testing. Reviewed Designated Operator paperwork which was in good order. One drum of water/fuel from spill buckets and sumps will be properly disposed of this month. Facility is in full compliance and no violations noted.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 11/21/2018
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

On site to test previously failed and repaired secondary components for SB 989. Three of the 4 tests passed (87 West and Diesel West piping secondary, 91 grade turbine sump). The transition UDC piping sump failed after repeated failed tests due to increases. A modified barrier will be used during the next test to protect against wind or debris falling into the sump during testing. Next test will be in approximately 1 week.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/07/2015
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

SB 989 testing conducted for 87, 91, and diesel fuel tank systems including tank annulars, fill and turbine sumps, piping secondary, UDCs, and transition sump. All tests successful, facility passed test criteria and is certified as being in full compliance with the secondary containment requirements of SB 989. No violations noted.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/04/2013
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

HMBP HAS BEEN SUBMITTED ON LINE AND IS UP TO DATE. UST LEAK MONITORING SYSTEM CERTIFICATION IS SUCCESSFUL AND NO PROBLEMS WERE ENCOUNTERED. ALL TESTING PASSED AND FACILITY IS IN FULL COMPLIANCE.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Case Worker:
File Location: Regional Board

Based on the soil investigation, groundwater monitoring, and cleanup results, Central Coast Water Board staff believes there is no significant threat to groundwater resources, human health and the environment from this site. Petroleum hydrocarbon concentration trends are downward, and remaining residual soil and groundwater contamination are well characterized and contracting or declining in size and concentration. The contaminant mass has been removed from the site to the maximum extent practicable, and historical monitoring data indicate contaminant concentrations in groundwater will likely decrease to below cleanup goals in a reasonable time. The San Luis Obispo County Environmental Health Services (EHS) agrees with our proposed closure of the case. Residual soil and groundwater contamination still underlies the site that could pose an unacceptable risk under certain site redevelopment activities such as site grading, excavation, or de-watering. The Central Coast Water Board, EHS, and the appropriate local planning and building departments must be notified prior to any changes in land use, grading activities, excavation, or dewatering. This notification should include a statement that residual soil and groundwater contamination underlie the property and may underlie nearby properties, and a description of the mitigation actions necessary (if any) to ensure that any possibly contaminated soils or groundwater brought to the surface by these activities are managed appropriately. Future site disturbance could require worker health and safety protection, and restrictions on the disposal of soil and groundwater. The levels of residual contamination and any associated risks are expected to diminish with time. The EHS may require additional site assessment if the property is proposed to be redeveloped. Additional actions required by EHS may include, but not limited to, a case review, further remedial action, soil gas analysis, and a human health risk assessment.

Evaluations

Eval Date: 09/12/2017
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

Annual Monitoring System Certification - tested all leak detection sensors, fail safe, emergency shut off, shear valve shut down, spill buckets and Designated Operator forms. No violations noted during testing. Facility is in full compliance.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/10/2018
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

HMBP is current for CY 2018 and has been submitted electronically via E Z Submit Portal. No violations noted.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/24/2013
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

HazMat Business Plan is current and has been submitted electronically.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/12/2016
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

HazMat Business Plan will be updated and submitted on line no later than Sept. 26, 2016.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 04/26/2017
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

Tri-ennial testing of UST system (87 91 grade) as per SB 989 requirements. All tests passed, no further requirements, and no violations noted.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/14/2015
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

HMBP updated and submitted, no further requirements.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/10/2018
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

On site for annual UST Monitoring System Certification of 87 & 91 grades of gasoline. All tests passed, all paperwork in good order, no violations noted during testing.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/24/2013
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Annual Inspection - no violations.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/12/2016
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

Annual Monitoring System Certification conducted - all leak detection equipment performed as designed, no problems noted. System is in full compliance with state regulations, no additional work required.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/24/2013
Violations Found: No
Eval General Type: Compliance Evaluation Inspection

Potential Media of Concern: Other Groundwater (uses other than drinking water), Well used for drinking water supply
How Discovered Description: SLOFD opened case based on used-oil UST removal work.

Calwater Watershed Name: Estero Bay - Point Buchon - San Luis Obispo Creek (310.24)
DWR GW Subbasin Name:
Disadvantaged Community:
Site History:

Chevron Environmental Management Company has met the requirements for case closure under the Low-Threat Underground Storage Tank Case Closure Policy adopted by the State Water Board via Resolution No. 2012-0016. This concludes the Central Coast Water Board's regulatory oversight for the investigation and cleanup of the underground storage tank (UST) system release. Central Coast Water Board staff has closed this UST case, even though groundwater pollution remains at concentrations greater than the typical Central Coast Water Board cleanup goals for total petroleum hydrocarbons as gasoline (TPH-g), benzene, ethylene's, methyl tertiary butyl ether (MTBE) and tributyl alcohol (TBA). Concentrations of other common contaminants associated with gasoline and fuel oxygenates are below cleanup goals or are below laboratory detection limits. Based on the soil investigation, groundwater monitoring, and cleanup results, Central Coast Water Board staff believes there is no significant threat to groundwater resources, human health or the environment from this site. Petroleum hydrocarbon concentration trends are downward, and remaining residual soil and groundwater contamination are well characterized and contracting or declining in size and concentration. The contaminant mass has been removed from the site to the maximum extent practicable, and historical monitoring data indicate contaminant concentrations in groundwater will likely decrease to below cleanup goals in a reasonable time. The City of San Luis Obispo Fire Department (Local Agency) agrees with our closure of the case. Residual soil and groundwater contamination still underlies the site that could pose an unacceptable risk under certain site redevelopment activities such as site grading, excavation, or de-watering. The Central Coast Water Board, San Luis Obispo County Environmental Health Services (EHS), San Luis Obispo City Fire Department (SLOCFD) and the appropriate local planning and building departments must be notified prior to any changes in land use, grading activities, excavation, or dewatering. This notification should include a statement that residual soil and groundwater contamination underlie the property and may underlie nearby properties, and a description of the mitigation actions necessary (if any) to ensure that any possibly contaminated soil or groundwater brought to the surface by these activities are managed appropriately. Future site disturbance could require worker health and safety protection, and restrictions on the disposal of soil and groundwater. The levels of residual contamination and any associated risks are expected to diminish with time. The SLOCFD may require additional site assessment if the property is proposed to be redeveloped. Additional actions required by SLOCFD or EHS may include, but not limited to, a case review, further remedial action, soil gas analysis, and a human health risk assessment.

SAN LUIS OBISPO, CITY OF
Gndwater Monitoring Freque:
Designated Beneficial Use Municipal and Domestic Supply, Agricultural Supply, Industrial Service Supply, Industrial Process Supply
Desc:
Site History:

Chevron Environmental Management Company has met the requirements for case closure under the Low-Threat Underground Storage Tank Case Closure Policy adopted by the State Water Board via Resolution No. 2012-0016. This concludes the Central Coast Water Board's regulatory oversight for the investigation and cleanup of the underground storage tank (UST) system release.

Central Coast Water Board staff has closed this UST case, even though groundwater pollution remains at concentrations greater than the typical Central Coast Water Board cleanup goals for total petroleum hydrocarbons as gasoline (TPH-g), benzene, ethylene's, methyl tertiary butyl ether (MTBE) and tributyl alcohol (TBA). Concentrations of other common contaminants associated with gasoline and fuel oxygenates are below cleanup goals or are below laboratory detection limits.

Based on the soil investigation, groundwater monitoring, and cleanup results, Central Coast Water Board staff believes there is no significant threat to groundwater resources, human health or the environment from this site. Petroleum hydrocarbon concentration trends are downward, and remaining residual soil and groundwater contamination are well characterized and contracting or declining in size and concentration. The contaminant mass has been removed from the site to the maximum extent practicable, and historical monitoring data indicate contaminant concentrations in groundwater will likely decrease to below cleanup goals in a reasonable time. The City of San Luis Obispo Fire Department (Local Agency) agrees with our closure of the case.

Residual soil and groundwater contamination still underlies the site that could pose an unacceptable risk under certain site redevelopment activities such as site grading, excavation, or de-watering. The Central Coast Water Board, San Luis Obispo County Environmental Health Services (EHS), San Luis Obispo City Fire Department (SLOCFD) and the appropriate local planning and building departments must be notified prior to any changes in land use, grading activities, excavation, or dewatering. This notification should include a statement that residual soil and groundwater contamination underlie the property and may underlie nearby properties, and a description of the mitigation actions necessary (if any) to ensure that any possibly contaminated soil or groundwater brought to the surface by these activities are managed appropriately. Future site disturbance could require worker health and safety protection, and restrictions on the disposal of soil and groundwater. The levels of residual contamination and any associated risks are expected to diminish with time. The SLOCFD may require additional site assessment if the property is proposed to be redeveloped. Additional actions required by SLOCFD or EHS may include, but not limited to, a case review, further remedial action, soil gas analysis, and a human health risk assessment.

LUST Sites from GeoTracker Search - Cleanup Action Report (as of Feb 24, 2020)

Action Type: IN SITU BIOLOGICAL TREATMENT ***Begin Date:*** 9/17/2008
Phase: Water ***End Date:*** 1/16/2012
Contaminant Mass Removed:
Description: Using oxygen diffusion system installed in MW-2, 4, 12, & B. 1/12/12: Requested removal of oxygen diffusion system from wells, and will turn them off and remove the equipment January 16, 2012.

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:*** 12/11/2006
Phase: Water ***End Date:*** 12/14/2007
Contaminant Mass Removed:
Description: 72-hour multi-phase extract (MPE) event , and 2,506 gal of GW extracted

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:*** 9/1/2005
Phase: Water ***End Date:*** 9/4/2005
Contaminant Mass Removed:
Description: 72-hour multi-phase extract (MPE) event, and 420 gal of GW extracted

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:*** 9/27/2004
Phase: Water ***End Date:*** 10/4/2004
Contaminant Mass Removed:
Description: DPE removed approx 179 lbs (29 gal) of gasoline

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:*** 9/27/2003
Phase: Water ***End Date:*** 10/4/2006
Contaminant Mass Removed: 596 Pounds
Description: 9/27/04 - 10/4/04: DPE removed total of 213 gal of contaminated water from wells. Revised 11/22/11: 2003-2006 DPE events total

Action Type: PUMP & TREAT (P&T) GROUNDWATER ***Begin Date:*** 5/5/2003
Phase: Water ***End Date:*** 2/9/2007
Contaminant Mass Removed: 1 Pounds
Description: As of 12/29/05: 723,183 gal water, and 0.56 lbs hydrocarbons extracted. MW-3, 9, 11, 12, 16, A, & B were connected to GWPTS. Treated discharge to creek under Gen NPDES.

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:*** 4/16/2001
Phase: Water ***End Date:*** 4/24/2001
Contaminant Mass Removed: 323 Pounds
Description: Mobile MPE Feasibility Test.

Action Type: IN SITU PHYSICAL/CHEMICAL TREATMENT (OTHER THAN SVE) ***Begin Date:*** 3/7/2001
Phase: , Water ***End Date:*** 3/13/2001
Contaminant Mass Removed:
Description: Mobile MPE Feasibility Test

Action Type: PUMP & TREAT (P&T) GROUNDWATER ***Begin Date:*** 1/15/2001
Phase: Water ***End Date:*** 12/15/2001
Contaminant Mass Removed:

Description: Nine well overpurge events.

Action Type: EXCAVATION
Begin Date: 6/6/1998
Phase: Soil, Water
End Date: 6/7/1998
Contaminant Mass Removed:
Description: Various remedial excavations, i.e. USTs, WO-UST, Disp. UST pit dewatered treated and disposed to sewer.

Action Type: EXCAVATION
Begin Date: 6/6/1996
Phase: Soil
End Date: 6/7/1996
Contaminant Mass Removed:
Description: Removed during Used-Oil UST removal

Confirm wells destroyed.

Action Type: Response Requested - Reports
Action Date: 2/28/2013
Received Issue Date: 3/1/2013
Action: Well Destruction Report
Doc Link:
Title Description Comments:

- Chevron indicates they would like to retain MW-A (installed during UST install) located within UST excavation. Request rational for retaining well & well inspection protection plan., All wells were cut/capped 5 fbg. Wells MW-A, MW-B, and MW-11 were filled with coated bentonite pellets, hydrated, top 5 feet of casing removed and capped with concrete to match surrounding surface. The grout formula was approximately 75 lbs of grout to 35 gallons of water. , Review E-copy: No details of grout mixture. MW-A, B, and 11, located in the current or former UST cavity, were destroyed in place by filling the well casing with bentonite-coated pellets. All other MWs were pressure grouted by filling the well casing with bentonite grout and applying up to 30 psi to the well casing for a duration of 10 minutes. The process was repeated until the grout column stabilized in the borehole. The casing was then cut and capped 5 feet bgs, the wellbore filled with bentonite to 1 fbg, and capped with concrete to match the surrounding surface.

Violations

Violation Date: 07/15/2014 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** San Luis Obispo County Environmental Health
Citation: HSC 6.7 25292(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25292(e)
Violation Notes:

Returned to compliance on 08/13/2014.

Violation Description:

Failure to maintain secondary containment, as evidenced by failure of secondary containment testing.

Violations

Violation Date: 01/13/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** San Luis Obispo County Environmental Health
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Notes:

Returned to compliance on 01/13/2016. Spill buckets leaked due to sediment and debris. Drain was cleaned and re-tested and passed. Violation corrected same day.

Violation Description:

Failure to comply with one or more of the following: failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion.

Violations

Violation Date: 07/13/2017 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** San Luis Obispo County Environmental Health
Citation: HSC 6.7 25290.1(c), 25290.2(c), 25291(a)(2), 25292(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c), 25290.2(c), 25291(a)(2), 25292(e)
Violation Notes:

Returned to compliance on 08/18/2017.

Violation Description:

Failure to maintain secondary containment (e.g. failure of secondary containment testing).

Violations

Violation Date: 01/03/2018 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** San Luis Obispo County Environmental Health
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Notes:

Returned to compliance on 01/03/2018.

Violation Description:

Failure to comply with one or more of the following:

Failure to install or maintain a liquid-tight spill bucket.

Have a minimum capacity of five gallons.

Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container.

Be resistant to galvanic corrosion.

Violations

Violation Date: 07/27/2014
Violation Source: CERS
Violation Program: UST
Violation Division: San Luis Obispo County Environmental Health
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Notes:

Returned to compliance on 08/27/2014. PLLD for 87 grade fuel failed. Service call made and tech changed out bad unit. Tested ok, station in compliance. Re-tested unit today and worked properly, no further action.

Violation Description:

Failure of the pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs.

Evaluations

Eval Date: 10/24/2018
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Luis Obispo County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

Chevron was issued a permit to remove existing dispensers/UDC and cut piping to allow installation of new UDC/Dispensers. On site this date to test new UDC, primary product/& vapor piping, and piping slope. UDC was shipped to the site under approx 16-17 inches of vacuum. All tests passed testing, no problems.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 01/09/2014
Violations Found: No

Site History:

The site is currently occupied by a brick building that formerly housed the Sunny Acres Children's Home. The site will consist of between 3 to 5 acres of land located at the northeastern corer of the property. The site was first developed in 1930 with the existing two-story, unpainted, red brick building. The building was used to house orphans and delinquent/criminal youths until its closure in 1974. Surrounding properties consist of residential and commercial businesses since at least the early 1900s.

School District:
Past Use that Caused Contam: MANUFACTURED GAS PLANT
Potential Media Affected: SOIL
Potential Contamin of Concern:

ARSENIC, POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)

Site History:

This site consists of a 0.83 acres at the corner of Pacific and Archer Streets which are a portion of a former Manufactured Gas Plant that pccupied approximately 2.4 Acres encompassing the entire block between Pacific, Pismo, Walker, and Archer Streets. A manufactured gas plant operated at this site from approximately 1903 until 1918. The plant quit operating after natural gas was brought to the city and the plant was dismantled in approximately 1926.

Due to complex ownership issues with entire former MGP property, it has been split into four separate pieces. Three of those pieces (totaling 1.57 acres) have, or are currently being investigated and/or cleaned up and are listed in EnviorStor as separate projects as discussed belwow. The remaining 0.83 acres, which are included under this Site ID, need evaluation and may eventually become active. It is anticipated that work on the PG&E SAN LUIS OBISPO - 1 FORMER MGP site discussed below will provide information which will help answer questions about the condition of the remaining 0.83 acres encompassed by this Site ID.

The Pacific Gas and Electric Company (PG&E) operated an electrical substation on a portion of the former MGP property from 1940-1980. This portion of the property is called the PG&E Zone 1 Substation and is included in EnviroStor as site number 40490013. Currently this 0.4 acre portion of the former manufactured gas plant site is used as a communications center. It has been investigated and is currently the subject of a Removal Action Workplan.

Another 0.33 acre portion of the former MGP property is known as 1327 Archer Street which is included in EnviroStor as site number 60001034. 1327 Archer street is owned by Coastal California Properties, LLC. It is being evaluated under a VCA executed between DTSC, the property owner and PG&E. Based upon those efforts, it has been determined that the site has been cleaned to industrial/commercial standards. A LUC is currently proposed for the site.

A third portion of the former MGP property is know as PG&E SAN LUIS OBISPO - 1 FORMER MGP which is listed in EnviroStor as site number 60001181. This portion of the former MGP property consists of approximately 0.84 acres which is inclusive of Parcel Numbers 002-505-005 and 002-505-006 (1390 Walker Street and 280-290 Pismo Street). PG&E acquired this portion of the property in late summer of 2009 and entered into a VCA with DTSC on October 5, 2009 for oversight of the investigation and cleanup .

Potential Contamin of Concern:

POLYCHLORINATED BIPHENYLS (PCBS), POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS), TPH-DIESEL

Site History:

This is a 0.34 acre portion of a former manufactured gas plant site located at the corner of Pacific, Walker, and Higuera Streets. See PG&E Manufactured Gas Plant MT-LP-SLO-1 (EnviroStor # 40490011). The Pacific Gas and Electric Company (PG&E) purchased the property in 1938 and operated a substation and communications center from 1940 until the present on this portion of the former gas plant site.

PG&E completed a Preliminary Endangerment Assessment on this parcel in 1992. No investigation of the rest of the site is known to have occurred.

Potential Contamin of Concern:

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)

Site History:

This is a former manufactured gas plant site that operated from approximately 1875 until 1905. It was dismantled and a new plant was built around 1905. The current land use is residential.

Status: INACTIVE - NEEDS EVALUATION

Potential Media Affected: SOIL, SURFACE WATER AFFECTED
Potential Contamin of Concern:

NO CONTAMINANTS FOUND

Site History:

The Site is an approximately two-acre property located at 990 Industrial Way within a mix-use industrial, commercial, and residential portion of the City of San Luis Obispo. The Site is improved with a large building that is occupied by the Graduate Restaurant, which operates as a restaurant, bar, and night club.

DTSC conducted a PA/SI Site Screen in 2017. Based on a review of publicly available historical aerial photographs and topographic maps the building was constructed in 1979. The Site was undeveloped prior to 1967.

A search for the Site address and facility was conducted in DTSC's Hazardous Waste Tracking System database, but no records were found. A search of online business listings for the Site found no evidence of former electronic recycling facilities or operations. Additionally, local and state agencies contacted for this Site Screen did not have records pertaining to environmental or hazardous material documents for the Site.

Evidence of electronic recycling operations or that hazardous materials were used, stored, released, or disposed of at the Site were not found during this Site Screen.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Mar 26, 2020

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Apr 27, 2020

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Apr 27, 2020

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Apr 27, 2020

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: May 22, 2020

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: May 22, 2020

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: May 4, 2020

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: May 4, 2020

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: May 4, 2020

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: May 4, 2020

RCRA Conditionally Exempt and Very Small Quantity Generators List: RCRA CESQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt and Very Small Quantity Generators (VSQG and CESQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG and CESQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: May 4, 2020

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: May 4, 2020

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 26, 2020

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Feb 26, 2020

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 25, 2019

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Sep 3, 2019

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Oct 8, 2019

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jan 13, 2020

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: May 22, 2020

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Apr 27, 2020

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Jul 14, 2020

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Jul 14, 2020

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Jul 14, 2020

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: May 1, 2020

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Jul 14, 2020

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Jul 15, 2020

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Jul 15, 2020

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Jul 15, 2020

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Jul 12, 2020

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Jul 7, 2020

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

Oil and Gas Facility Tanks: TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Jul 21, 2020

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Jul 21, 2020

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: May 12, 2020

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Jul 14, 2020

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Apr 8, 2020

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Jul 15, 2020

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Jul 14, 2020

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Jul 15, 2020

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Jul 27, 2020

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: May 12, 2020

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 8, 2020

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 8, 2020

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

County

San Luis Obispo County - CUPA Facilities List: SANLUISOB CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Luis Obispo County. This list is made available by County of San Luis Obispo Environmental Health Services Division which has been designated as the CUPA for the County.

Government Publication Date: Aug 28, 2019

Additional Environmental Record Sources

Federal

PFOA/PFOS Contaminated Sites: PFAS NPL

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Jul 7, 2020

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Mar 25, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Dec 20, 2019

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Jan 8, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Mar 19, 2020

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: May 22, 2020

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jan 20, 2020

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jan 20, 2020

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Jan 28, 2020

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Oct 31, 2019

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Oct 31, 2019

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 6, 2019

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jun 22, 2020

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 31, 2020

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Oct 9, 2019

State

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: May 5, 2020

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: May 5, 2020

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

List of sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Jul 15, 2020

PFOA/PFOS Groundwater: PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.Y

Government Publication Date: Apr 16, 2020

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: May 26, 2020

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Jul 20, 2020

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Jul 14, 2020

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Apr 20, 2020

Hazardous Waste Manifest Data: HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: May 12, 2020

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Jul 15, 2020

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Jul 15, 2020

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2017

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jun 30, 2018

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental databases were selected to be included in the search.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

748 Pismo Street • San Luis Obispo, CA 93401 • 805/549-7380

TO: Underground Tank Owner and/or Operator

FROM: R. K. Miller, Inspector/Underground Tanks

We have received your application for permit to operate an underground storage tank. Please note the box(es) checked off for information needed to complete the processing of your application. Your prompt reply to ensure an interim or final permit would be appreciated.

The following were not received:

[ ] An application for each tank.
Received: _____ Need: _____ more.

[X] Monitoring alternative not indicated (including frequency).

[X] Plot Plan [ ] Sample Inventory Sheet

Monitoring Alternative:

[ ] Frequency of monitoring inadequate (*See comments).

[ ] Monitoring alternative is not applicable for location and/or size and number of tanks (*See comments).

*Additional comments and/or requirements:

TANKS ARE to be REMOVED by 1 SEPT 86
until then they need to be monitored
Donald Woods HAS be notified

If you have any questions, please contact our office at 805/549-7380.

RE: Underground Storage Tanks

Gentlemen:

This letter is written in response to the Underground Storage Tank regulations. Sears has approximately three hundred tanks throughout California, and has the following tanks within your jurisdiction:

Facility	Address	Number	Type	Size
San Luis Obispo Store	273 Madonna Rd. San Luis Obispo, CA 93401	1	Waste oil	Unk.
San Luis Obispo Central Svc.	1310 Rounhouse San Luis Obispo, CA 93401	1	Gas/Diesel	6000 Gal.

Sears proposes to remove all of these underground storage tanks and replace the waste oil tanks with above the ground tanks. Obviously, this is going to be an extremely time consuming and costly undertaking. Due to budgetary and scheduling concerns, Sears believes that this can best be accomplished by scheduling the removal of these tanks over the next two years. It is anticipated that approximately one half of the tanks will be removed in 1986 and the balance in 1987.

Under the circumstances, we request that you allow us to remove the tanks within these time frames. Upon your concurrence, a master list scheduling the removal of all California tanks will be prepared.

Will be removed
by 1 Sept 86

Subject: **Remedial Activities and Site Closure Report**
Parcel with APN# 004-847-001
Triangular Part of 2201 Emily Street,
San Luis Obispo, California

Dear Mr. Boyle:

AB Geoscience & Environmental Consults (AB), in behalf of Halferty/DeBeikes Investment, is pleased to submit the results of Remedial Activities and Site Closure Reports for the triangular portion of former Albertson's property located 2201 Emily Street in city of San Luis Obispo, California.

These reports are prepared in accordance with the approved Feasibility Study/Remedial Action Plan, which was prepared for these sites.

If you have any questions regarding this report, please do not hesitate to call us at (949) 499-0799.

Respectfully submitted,

AB Geoscience & Environmental Consultants

1.0 INTRODUCTION

1.1 Purpose

AB Geoscience & Environmental Consultants (AB) was retained by DeBeikes Investment Company to perform soil remediation at a portion of parcel with APN #004-847-001, which is the southern part of former Albertson's property and is located at terminus of Alphonso Street, in City of San Luis Obispo, California. (Figure 1). This report is prepared for submittal to the San Luis Obispo Fire Department (SLOFD) and Central Coast Water Board (CCWB) in accordance with the California Health and Safety Code.

1.2 Objectives

Cleanup of crude oil/heavy oil impacted soil in accordance with the existing remedial action plan prepared for this site and approved by SLOFD as over sighting agency.

1.3 Site Location and Description

The subject site is a triangular shape vacant lot located at the eastern terminus of Alphonso Street in a mixed residential and commercial area of City of San Luis Obispo, California (Figure 1). The Site is recorded as Parcel with APN number 004-847-001, a portion of the former Albertson's property, located at 2201 Emily Street. The site is separated from the main property by a drainage, which starts from eastern property line and ends to the sewer system located at the terminus of the Alphonso Street (Figure 2). The site is bordered by the drainage to the north, United Pacific Rail Road (UPRR) property to the east, the Alphonso Street cul-de-sac and the former Pacific Coast Railway right-of-way (now occupied by the San Luis Garbage Company) to the west.

The Site elevation is ranging from approximately 220 to 235 feet above mean sea level (MSL). The surface topography has a gentle slope toward northwest.

The site is a vacant lot and no structure exists at the site. The former structures at the site included two abandoned retention ponds.

1.4 Site History

Based on the review of historical aerial photos, Earth System reported that two retention ponds were active between at least 1949 and 1956. The ponds appeared to have contained oil and water and were apparently removed from service and backfilled at the same time that Southern Pacific Railroad roundhouse was demolished around 1959. The site was backfilled for the second time with clean soil and brought to the same elevation as railroad property and was later used for truck and equipment by San Luis Garbage Company.

1.5 Previous Site Investigations

During December 2007, Earth System performed an Environmental Site Assessment (ESA) at the site. Earth System excavated 12 trenches to a maximum depth of 12 feet and drilled five soil borings to the maximum depth of 20 feet within and around the pond areas. Earth System reported the presence of total recoverable petroleum hydrocarbons (TRPH) with concentrations up to 160,000 milligram per kilogram (mg/kg) in soil samples collected from trenches and borings located within the pond areas (Table 1). No petroleum hydrocarbon in the range of gasoline or diesel was reported in the ESA. No volatile organic compounds or metals were detected above the EPA Region 9 Preliminary Remediation Goals (PRGs) in soil samples collected and tested by Earth System.

1.6 Regional Geology/Hydrogeology

Based on the reports prepared by Earth System, SECOR and Converse, the site is situated in the foothills of the Santa Lucia Range, within the geomorphic province known as the Coast Ranges, a region characterized by northwest-trending ridges and intervening valleys. Bedrock in the San Luis Obispo area consists of oceanic rocks of the late Jurassic to Cretaceous age Franciscan Formation. Dominant rock types within the bedrock assemblage include serpentinite, metavolcanic rocks such as greenstone, bedded chert, and greywacke sandstone. The site is underlain by unconsolidated alluvium of Quaternary age. Shallow soils at the site consist primarily of dark brown sandy clay.

Groundwater in the San Luis Obispo area occurs within the unconsolidated alluvium and in deeper fractures within the bedrock. Based on the previous site investigations conducted in the vicinity of the subject property, it is documented that groundwater generally occurs within a shallow zone as a perched condition, on top of the siltstone formation.

Earth System reported a depth to water equal to 17 feet below ground surface with surface elevation of 235 feet above mean sea level (MSL). Therefore, the groundwater elevation at the site is equal to 217 feet above MSL. This elevation is in conformance with groundwater elevation (115 feet) reported at former groundwater monitoring well MW-3, located immediately north of the site. Earth System also reported presence shallow (8 feet bgs) water bearing zones in localized trenches and soil borings limited to the northern portion of the property.

During the excavation of contaminated soil, which covered most of the site to a depth of 11 feet bgs, it was confirmed that the trace of water detected in some of the trenches excavated by Earth System are limited to shallow, discontinuous, 3-inch thick fine to coarse black lenses of sand, which was limited to the northern portion of the northern pond (Figure 4). The sand lenses were isolated and water disappeared after the removal of the sand lenses.

AB

2.0 REMEDIAL INVESTIGATION SUMMARY

2.1 General

The nature and extent of the impacts to soil and groundwater at and surrounding the Site have been assessed through several investigations conducted since 1987. The following sections provide a summary of findings for each of these media, which generally has been excerpted from various reports (References 3 through 8). Since the previous environmental site assessments were approved by the CCWB and SLBFD, supplemental data have been collected at the Site to support pre-remedial design activities. These reports also are summarized within this section.

2.2 Previous Site Investigations

During December 2007, Earth System performed a site investigation at the site. Earth System excavated 12 trenches to a maximum depth of 12 feet and drilled five soil borings to the maximum depth of 20 feet within and around the pond areas. Earth System reported the presence of total recoverable petroleum hydrocarbons (TRPH) with concentrations up to 160,000 milligram per kilogram (mg/kg) in soil samples collected from trenches and borings located within the pond areas. No petroleum hydrocarbon in the range of gasoline or diesel was reported in the ESA. No volatile organic compounds or metals were detected above the EPA Region 9 Preliminary Remediation Goals (PRGs) in soil samples collected and tested by Earth System.

2.3 Feasibility Study, Remedial Action Plan (FS/RAP)

On February 8, 2008, AB prepared a FS/RAP for the site. The FS/RAP consisted of developing remedial alternatives, screening these alternatives, and then performing a detailed analysis of the most applicable alternatives to be utilized in preparation of a remedial action plan. Primary risk driving chemicals were identified as: TPH as diesel, and crude oil.

The potential remedial technology types and specific technologies were identified and then screened to assess their effectiveness, implementability, and cost with regard to the COCs. Selective Excavation and Off-site Disposal was selected as the final alternative for site remediation. The FS/RAP was approved by SLOFD and CCWB.

3.0 CLEANUP CRITERIA

3.1 Chemicals of Concern

Based on the approved FS/RAP, primary risk driving chemicals were identified from the list of Chemical of Potential Concerns as chemicals of concern (COCs). These chemicals were identified as primary risk drivers. Specific COCs for the Site are:

- TPH as diesel, and crude oil (Screened based on the requirements of the regulating agencies and not on the risk driving chemicals), and

3.2 Cleanup Criteria

The cleanup criteria for the Site were developed during the meeting in presence of Mr. Kerry Boyle representing the City of San Luis Obispo Fire Department and Mr. Richard Chandler representing the Central Coast Water Board as over sighting agencies and Project Design Team.

CLEANUP CRITERIA
2201 Emily Street Site, San Luis Obispo, California

Medium	Cleanup Criteria
	TPH
Soil	Cleanup below agency required soil cleanup level
Groundwater	No issue

3.3 TPH Cleanup Criteria

The cleanup criteria for soil remediation are recommended as 100 mg/kg for gasoline, and up to 1000 mg/kg for diesel, heavy oil, and crude oil.

AB

4.0 REMEDIAL ACTION

Based on the comparison of various alternatives for remediation of the TPH impacted soil, the alternative of "Selective Excavation and Off-site Disposal" was selected for remedial action at this site.

4.1 Permits

Prior to initiation of the field activities the following permit applications were filed and approval were obtained from regulating agencies (Appendix A):

- Air Quality Management District (AQMD) extended the permit for excavation of TPH impacted soil, which was previously issued for the rest of the property.
- Permit for transportation and disposal of the TPH impacted soil at City of Santa Maria Sanitation Landfill.
- Permit for excavation and run-off control from City of San Luis Obispo.

4.2 Preparation for Excavation

48 hours prior to the initiation of excavation activity, Underground Service Alert (Digalert) was notified and the outline of the excavation areas was marked with white paint. The work zone were defined and Exclusion Zone, Contamination Reduction Zone, Support Zone, and, Safe Zone were delineated using appropriate signs and barricades.

4.3 Health and Safety Plan

A Site Specific Health and Safety Plan was prepared and during daily meetings content of the Health and Safety Plan (HASP) was explained to the personnel working onsite. The health and safety plan addressed the "worst case" situation regarding potential chemicals and physical hazards with respect to worker safety; Hazard Control Level; type of Personal Protective Equipment (PPE) for each level; training requirements for employees; air monitoring requirements; work periods/rest breaks; and emergency contacts and procedures.

The HASP described in detail the Exclusion Zone, the Contamination Reduction Zone, personnel decontamination procedures, equipment decontamination process, the Support Zone (i.e., safe zone), and placement of Wind Indicators upwind of the Contamination Reduction Zone.

4.4 Excavation Quarry

Based on the historical aerial photos, the footprint of retention / evaporation ponds covers almost the whole site (with the exception of the northwest portion of the site) and partially exceeds the eastern property line into the UPRR property (Figure 2).

AB

On March 26, 2008, PC Inc started the excavation as an open quarry using a backhoe for the limited access area at the southern portion of the site and an excavator and loader for the rest of the property.

In the first phase of the excavation (southern pond), the upper 3 to 5 feet of the soil (clean soil) was stripped and after separation of the sizable metal, wood, and concrete debris, was stockpiled at the northeast portion of the site (Clean Stockpiles). This portion of the soil, which was distinctly separated by a sharp contrast from the underlying black organic clay, was artificially placed on the top of the abandoned pond prior to the occupancy of the San Luis Garbage Company.

Eight verification soil samples SP-1 through SP-8 were collected from clean stockpile following the procedures described on the section 4.5. Analytical test results of the collected soil samples from this stockpile indicates that no TPH concentration above the practical quantitative limits (PQL) of 10 mg/kg for diesel range (C10 to 28) and 50 mg/kg for the oil range (C28+) were detected in these samples (Table 2 and Appendix B). Therefore, it was decided that the stockpiled soil is suitable for backfill of the excavated area.

In order to verify the condition of the soil, as well as the lateral and vertical extent of the southern pond, two10-foot deep exploratory trenches were excavated at the bottom of the shallow excavation. Trenches were excavated perpendicular to the UPRR property line. Trenches did not pass the property line. Direct observation of the trench confirmed the presence of TPH impacted black organic clay to a depth of three feet followed by two feet of heavily TPH impacted soil containing tar-bearing veins. The bottom of the pond was marked by a sharp color contrast between the black TPH impacted soil and the greenish blue sandstone (bedrock). I t was also observed that petroleum hydrocarbon was seeping from the end wall of the trench (UPRR property line) into the trench at an approximate depth of 8 to 10 feet bgs. Therefore, it was confirmed that the lateral extent of the retention pond and the containing TPH impacted soil exceeds the UPRR property line.

The effort to obtain UPRR agreement with simultaneous remedial activities at both sides of the UPRR property line failed, it was decided to place a vertical barrier at the western side of the UPRR property line to prevent the migration of the TPH from UPRR property to the site after soil remediation. Therefore, a 2-foot thick, 200-foot long trench was excavated to the base of the bedrock west of the UPRR property line and 4-sack slurry was purred from bottom of the trench to 5 feet bgs.

Excavation of the southern pond was started using open quarry method by removing the black organic clay and the heavily hydrocarbon impacted soil to a depth of 11 feet bgs, where the impermeable dense siltstone (bedrock) prevented the downward migration of the water and sludge contained at the pond. The excavated soil was stockpiled on plastic sheet at the northwest portion of the site (contaminated stockpile).

Confirmation soil samples CSSW-1 was collected from south wall. Confirmation soil samples CSB-1 through CSB-6 were collected from the bedrock at the base of the excavation. Due to the unsatisfactory results of samples CSB-2 through CSB-4, the bedrock at the base of the excavation was excavated an additional two feet (total of 13 feet bgs). Confirmation samples CSB-2D through CSB-4D were collected approximately in the same locations as the original samples (Figure 3). No TPH concentration above the action level of1000 mg/kg for diesel and oil range (C10+) was detected in these samples (Table 3 and Appendix B). Therefore, the excavated area was backfilled and temporarily compacted to 5 feet above the bedrock (8 feet bgs). A new ramp was placed along the western property line to relieve the eastern portion of the pond for remediation.

In order to avoid a 13-feet deep open excavation wall along the UPRR property line and to prevent the collapse of the slurry wall, excavation at the eastern property line was continued by installation of series of 4-feet wide trench cuts (one at a time) perpendicular to the slurry wall at UPRR property line, removing the black organic clay and the heavily hydrocarbon impacted soil to depths of 13 feet bgs. The excavated soil was stockpiled on plastic sheet at the northwest portion of the site (contaminated stockpile) and trench was backfilled with the clean soil from the clean stockpiled soil. Additional soil was placed along the slurry wall to create a buttress and maintain a 1 to 1 slope.

During the second phase of the remedial action the northern Pond was excavated following the same approach and procedures implemented at the southern pond.

Prior to start of the excavation a 2-foot thick, 150-foot long trench was excavated to 3 feet below the top of the bedrock at the western side of the UPRR property line. A slurry wall was placed inside the trench by purring 4-sack slurry from the bottom of the trench to 5 feet bgs to prevent any potential lateral migration of contamination into the site.

Excavation of the northern pond was started using open quarry method by removing and segregating the upper 3 foot of the backfilled soil (clean Soil) followed by removal of the black organic clay and the heavily hydrocarbon impacted soil to depths of 11 feet bgs, where the impermeable dense siltstone (bedrock) prevented the downward migration of the water and sludge contained at the pond as a confining layer. The excavated soil was stockpiled on plastic sheet at the northwest portion of the site (contaminated stockpile). Crude oil impacted soil were chased vertically to the confining bedrock as the bottom of the pond and laterally to the eastern property line (slurry wall), and to undisturbed greenish blue siltstone bedrock as the northern and western walls of the pond.

Confirmation soil samples CSNPWW was collected from western wall of the pond. Confirmation soil samples CSNP-2 and CSNP-3 were collected from the northwest and northern wall of the pond, respectively. Confirmation soil samples CSNP-4, CSNP-5, VSNP-1, CSP-1 (NP), CSP-2 (NP), and CSP-3 (NP) were collected from the bedrock at the base of the excavation. Due to the unsatisfactory results of samples CSP-2 (NP) and CSP-3 (NP), the bedrock at the base of the excavation was excavated an additional two feet (13 feet bgs). Confirmation samples CSNP-2D and CSNP-4D were collected approximately in the same locations as original samples (Figure 3). No TPH

concentration above the action level of 1000 mg/kg for diesel range (C10 +) was detected in these samples (Table 3 and Appendix B). Therefore, the excavated area was backfilled and temporarily compacted to 5 feet above the bedrock, approximately 8 feet bgs (Figure 5 and 6).

In order to avoid a 13-feet deep open excavation wall along the UPRR property line and prevent the collapse of the slurry wall, excavation was continued by installation of series of 4-feet wide trench cuts (one at a time) perpendicular to the slurry wall at UPRR property line, removing the black organic clay and the heavily hydrocarbon impacted soil to depths of 13 feet bgs. The excavated soil was stockpiled on plastic sheet at the northwest portion of the site (contaminated stockpile) and trench was backfilled with the clean soil from the clean stockpiled soil. Additional soil was placed along the slurry wall to create a buttress and to maintain a 1 to 1 slope.

Similar approach was taken to excavate the soil along the northern wall of the pond against the easement of the sewer line/drainage. At the northern most part of the trenches, at the close proximity of the drainage, small amount of water was seeping into the trench, which was logically originating from the drainage. In order to avoid complication of compaction activities, four feet of clean sand was placed at the bottom of trench, followed by three feet of clean soil. Prior to backfill, a grab water sample was collected from the most central trench (Creek 1). The volume of water was not enough for testing under EPA Method 8015-M for Diesel and Oil range. Therefore, the collected sample was analytically tested for the presence of TPH as gasoline and BTEX using EPA method 8260B. No gasoline or BTEX were detected above the laboratory PQL (Table 4, Appendix B).

4.5 Soil Sampling

Soil samples from the bottom the excavations pits were obtained via utilizing a decontaminated hand held auger (at the safe areas) or directly from the tooth of the bucket of the excavator or backhoe at the unsafe area. The retrieved sample was immediately placed in a clean glass jar. Following the sample retrieval, the glass jars were sealed with a plastic lid, labeled with the sample identifications, date and time of sampling and project number, and immediately placed into a Ziploc bag and into a chilled ice chest using frozen blue and crushed ice.

The collected samples were delivered to American Scientific Laboratory (ASL), a laboratory certified in the State of California for hazardous waste testing, or Creek Environmental Laboratory in accordance with the EPA chain-of-custody procedure. Soil sampling from the excavation walls were performed by digging approximately one foot into the wall, followed by pushing a new and clean glass jar directly into the undisturbed soil. Following sample retrieval, the glass jars were sealed with a plastic lid, labeled with the sample identifications, date and time of sampling and project number, and immediately placed into a Ziploc bag and into a chilled ice chest using frozen blue and crushed ice.

Prior to use, all sampling tools and instruments were washed in a non-phosphate cleanser solution, rinsed with tap water and then distilled water.

Verification and profiling samples from the stockpiled soil were obtained via utilizing a decontaminated hand held auger following the aforementioned procedures.

4.6 Laboratory Analysis

All collected soil and groundwater samples were logged on requisite chain-of-custody record forms and were delivered to a State of California laboratory certified for hazardous waste testing.

Collected soil samples were analytically tested for Total Petroleum Hydrocarbons using EPA Method 8015 Modified for diesel, oil and crude oil range (TPH DRO/ORO).

Collected water sample was analytically tested for Gasoline, Benzene, Toluene, Ethylbenzene, and total Xylenes (BTEX) using EPA Method 8260B.

4.7 Disposal of Contaminated Soil

TPH impacted soil was stockpiled at the northwest portion of the site. Random profiling samples were collected on a daily basis by representative of the disposal facility. Analytical test results of original profiling samples were submitted to Santa Maria Regional Landfill for approval (Table 1).

During April 11, 2008 though May 22, 2008, a total of 8,337 tons of TPH impacted soil were transported by PC INC. (via Speeds Trucking) to Santa Maria Regional Landfill located at 2065 E. Main Street, Santa Maria, CA 93454. The transportation and disposal was performed under proper manifestation documents (Appendix C). The manifest documentation and soil disposal were performed under supervision of AB's Registered Geologist and SLOFD representative.

5.0 GROUNDWATER INVESTIGATION

During December 2007, Earth System performed an Environmental Site Assessment (ESA) at the site. Earth System excavated 12 trenches and drilled five soil borings. Isolated incidents of water seepage from shallow depths of 7 to 9 feet bgs was reported by Earth System in trenches T-1, T-4 and T-7 and soil boring B-1.

During the excavation of contaminated soil, which covered most of the site to a depths of 11 to13 feet bgs, it was confirmed that the trace of water detected in some of the trenches excavated by Earth System are limited to shallow, discontinuous, 3-inch thick, fine to coarse black lenses of sand, which were limited to the northern portion of the northern pond (Figure 4). The isolated sand lenses were discontinuous and water disappeared after the removal of the sand lenses. The encountered bedrock during the whole excavation activities was dry.

During a 4-day halt of the excavation, a small pothole was made in the bedrock below the aforementioned sand lens at the approximate location of Earth System trench T-1, to collect the drained water. After three days the lens totally drained and became dry. A total of 50 gallons of water was accumulated in the pothole. After obtaining the approval of RWQCB the collected water was pumped and sprayed on the contaminated stockpile as dust suppressant.

During a site meeting with presence of Mr. Kerry Boyle of SLOFD and Mr. Rich Chandler of RWQCB, the matter of shallow water bearing sand layer at the northern portion of the property was discussed. Mr. Chandler requested that after completion of the soil remediation and placement of the clean backfill material, a workplan be prepared to propose a Geoprobe / Hydropunch water sampling event to collect and analytically test the water samples (if any).

On May 22, 2008, AB Geoscience & Environmental Consultants prepared a workplan to install Geoprobe/Hydropunch for collection of water samples at the site.

On June 2, 2008, after obtaining the approval of SLOFD and RWQCB, Oilfield Environmental Compliance (OEC) drilled five geoprobe /hydropunch borings HP-1 through HP-5 to depths ranging from 5 to 10 feet with termination of one or two feet in the bedrock (Figure 4). Each hydropunch boring was equipped with a five-foot long, 1-inch diameter, 0.01 screen. Continuous core was collected from each boring. A California professional geologist inspected quality and moister content of the soil. No trace of water or excessive moister were detected in cores collected from HP-1 through HP-4. Noticeable moister was observed at the depth interval of 6 to 7 feet at the core collected from boring HP-5. The rest of the core of this boring including two feet of bedrock was dry.

Based on the request of Mr. Chandler, the boreholes were checked on an hourly basis using a clean and decontaminated sounder.

After four hours standby, borings HP-1 through HP-4 were still dry, but trace of water was detected at the tip of the sounder in boring H-5 (2 millimeter). Based on the request of Mr. Rich Chandler after removal of the casing and screen, boring HP-1 through HP-4 were backfilled with hydrated bentonite chips and standby was continued for another four hours on HP-5. At the end of the 8-hour stand by, the water column in HP-5 did not exceed 3 millimeter (1/8 of inch). Taking into consideration the presence of a dry siltstone s impermeable layer, elimination of the source by removal of the contaminated soil, removal of the thin sand lenses as source of seepage, and no accumulation of water in Hydropunch borings, Mr. Chandler was convinced that groundwater is not an issue at this site and SLO FD will maintain the position of lead agency for this project. This matter was approved by Mr. Kerry Boyle of SLOFD. After removal of the casing and screen, borehole H-5 was backfilled with hydrated bentonite to the surface.

AB

6.0 CONCLUSIOS & RECOMMENDATIONS

The reported retention/evaporation ponds, which were historically installed and operated by railroad prior to the installation of a filter plant at the northern portion of the former Albertson Property, contained TPH impacted soil with elevated concentration in the range of 160,000 mg/kg and localized petroleum saturated layers. With the exception of the northwest portion of the site, almost the rest of the triangular shape portion of the property was covered by these ponds from property line to property line.

A total of 8,337 tons of TPH impacted soil were successfully excavated from two ponds and transported to City of Santa Maria Sanitation Landfill under proper manifestation procedures.

Analytical test results of 16 confirmation soil samples collected from walls and bottom of the excavation pit, confirmed the adequacy of excavation at the site.

Taking into consideration that of source of contamination at the site is removed, the shallow thin sand lenses as source of localized seepage were eliminated during excavation, and no water was accumulated during the Hydropunch water sampling, Regional Water Quality Control Board, Central Region considers the groundwater is not an issue at this site.

Based on the data collected during previous investigations and recent site remediation activities, AB Geoscience & Environmental Consultants recommend that a site closure be granted for this site.

7.0 IMITATIONS

This report has been prepared for DeBeikes Investment Company to be submitted to the City of San Luis Obispo Fire Department and Central Coast Water Board. This report may be, for informational purposes only, provided to any assignee of DeBeikes Investment Company. There are no third party beneficiaries (intended or unintended) to this report, except as expressly stated herein. This report speaks only as of its date.

The findings, conclusions, and recommendations presented herein are based primarily upon the laboratory analyses of soil and groundwater samples collected by various environmental consulting firms during the various field activities associated with this property. All work has been conducted in accordance with generally accepted practices in the fields of environmental engineering, geology, and hydrogeology that exist in this or similar localities at this time. No other warranty, either expressed or implied, is made.

A registered geologist's certification of conditions comprises a declaration of his or her professional judgment. It does not constitute a warranty or guarantee, expressed or implied, nor does it relieve any other party of its responsibility to abide by contract documents, applicable codes, standards, regulations, and ordinances.

AB Geoscience is not responsible or liable for any claims or damages associated with the accuracy or completeness of information provided by others. This report should not be regarded as a guarantee that no further contamination, beyond that which may have been identified in our assessment, is present on, beneath, or in the vicinity of the property. Reliance on this report by Third Parties shall be at the Third Party's sole risk.

APPENDIX "A"

May 15, 2006

AIR POLLUTION CONTROL DISTRICT
COUNTY OF SAN LUIS OBISPO

Amir Rouhani
AB Geoscience and Environmental Consultants
237 Foothill Boulevard
San Luis Obispo, CA 934057

SUBJECT: Naturally Occurring Asbestos ATCM (NOA ATCM) – Geologic Exemption Request Granted: Albertsons, Inc., Remedial Action Project at 645/2201 Emily Streets, San Luis Obispo

Dear Mr. Rouhani:

The District has reviewed the various submittals for exemption from California Code of Regulations Section 93105 (Naturally Occurring Asbestos ATCM). After review of the documentation, the District agrees with the geological evaluation and grants AB Geoscience's request for exemption for the scope of evaluations, Albertsons, Inc. Remedial Action Project: 645 / 2201 Emily Streets.

Expiration of the Geologic Exemption: If AB Geoscience or its contractors subsequently discover any naturally occurring asbestos, serpentine, or ultramafic rock in the area to be disturbed, then:

1. **AB Geoscience or operator must comply with the requirements of CCR 93105;**
2. **AB Geoscience or operator must report the discovery of the naturally-occurring asbestos, serpentine, or ultramafic rock to the APCO no later than the next business day; and**
3. **The exemption under CCR 93105 subsection (c) (1) shall expire and cease to be effective.**

Based upon the information provided, we are unsure of the types of equipment that may be present at the site during construction. Portable equipment used during construction activities may require California statewide portable equipment registration (issued by the California Air Resources Board) or a District permit. Other types of activities may also require a District permit (soil aeration). Please contact David Dixon of the District's Engineering Division at (805) 781-5912 for specific information regarding registration or permitting requirements. As you know, this area has been used in a variety of different capacities. During excavation, please be aware of potential asbestos containing materials that may have been buried.

If you have any questions, please contact me at (805) 781-5912.

Very truly yours,

TIM FUHS
Air Quality Specialist

SUBJECT: TIME EXTENSION FOR DISPOSAL OF NON-HAZARDOUS HYDROCARBON IMPACTED SOIL AT THE SANTA MARIA REGIONAL LANDFILL

The City of Santa Maria Regional Landfill (SMRL) is in receipt of your request for a six month extension for Profile No 090602-000. The City has reviewed the results of the additional sampling along with the results of the random load check samples for the soil originating from the property located at 2201 Emily Street, in the City of San Luis Obispo, in the County of San Luis Obispo. The following decisions have been made for the extension of this profile:

Project Approval/Disapproval and Profile Number

1. Based on the review of this profile, the extension of this project has been APPROVED.
2. The project has retained Profile No. 090602-000.
3. This profile has been extended until October 31, 2008.
4. Note: In the event a generator exceeds 1,000 cubic yards, after estimating a volume less than 1,000 cubic yards, the generator will not be able to continue tipping at the landfill until a County encroachment permit is received or has agreed to be covered by the existing MOU between the City and County.

City of Santa Maria Responsibilities

The City or its designee will: 1) make site inspections before and during excavation in order to ascertain that the accepted NHIS material is coming from the approved location; and 2) perform random load sampling to ensure consistency with the soil profiles submitted to the City and that the loads are in compliance with all regulatory permits under which the City operates.

Central Coast Remedial Resources, Inc. Responsibilities

Central Coast Remedial Resources, Inc. (CCRRI) is responsible for coordinating the project, soil acceptance and placement, all invoicing, coordinating with City's operational staff, and to provide a minimum 24-hours advance notice prior to soil delivery.

Generator Responsibilities

As stated in the Santa Maria Regional Landfill Generator Waste Profile Form, the generator "retains responsibility for the composition of the material. If any soils delivered to the SMRL are found to be 'hazardous waste,' the customer shall be solely responsible for its removal." All NHIS Program limits and acceptance criteria are defined in the Hydrocarbon Soils Management and Disposal Plan for the City of Santa Maria Regional Landfill (Revision 8a, January 31, 2008).

Thank you, and please call me if you have any questions or concerns regarding the above.

Jeffrey Clark, P.E.
Solid Waste Manager
Department of Utilities
805-925-0951, Ext. 7239

COUNTY OF SANTA BARBARA
Public Works Department – Road Maintenance Division

Haul Agreement
Between the County of Santa Barbara and the City of Santa Maria to haul Santa Maria Regional Landfill cover material over the County maintained Road System No.20.

September 13, 2006

1. This agreement shall conform to the attached Memorandum of Understanding between the County of Santa Barbara and the City of Santa Maria to haul Santa Maria Regional Landfill cover material over the County Maintained Road System.

2. This agreement shall conform to the attached Road Encroachment Permits for; Philbric Road, permit no. 036851, and E. Main Street, permit no. 036851A.

3. In accordance with the MOU, the County hereby approves and grants permission to proceed with the initial hauling of approximately 1.3 million tons of material from the Guadalupe Dunes restoration site using the primary route that includes Simas Street and Betteravia Road or the secondary route that includes Black Rd. and Betteravia Road of the County maintained system.

4 In accordance with the MOU, subsequent haul routes of materials from sources projected to total less than 15,000 tons shall be chosen by the City from the preferred list of routes of Exhibit "A" of the MOU. Subsequent haul routes from sources projected to total more than 15,000 tons shall be proposed to the County for approval prior to commencement.
The County shall grant additional Haul Agreements to the City for each of these subsequent hauls on a case-by-case basis.

5. This agreement shall be in accordance with the approved San Luis Obispo County SEIR dated June 2005.

6. This agreement is entered into with the understanding that it does not establish a precedent. This agreement is issued at the discretion of the County Department of Public Works – Road Maintenance Division.

7. The City shall insure the safety of the traveling public during the execution of this agreement.

8. Amount of Material: 5,000 Tons From: 2201 Emily St - SLO To: Santa Maria Regional Landfill

9. Route: 101 South to Betteravia East, Betteravia East to Philbric North, Philbric to Landfill

10. Haul Start Date: 04/15/08 Haul End Date: 05/19/08

11. During landfill operational day light hours, Monday through Friday only.

12. Environmental Documents and Permits obtained as required: Y ☒ N ☐ (check one) Profile#090602-000

Legal Declarations

1. OWNER BUILDING DECLARATION:
I am exempt from the contractor's License Law for the following reason:

☐ *I, as owner of the property, or my employees with wages as their sole compensation will do the work and the structure is not intended or offered for sale.*

☐ *I, as owner of the property, am exclusively contracting with licensed contractors to construct the project.*

☐ *Not applicable.*

2. WORKER'S COMPENSATION DECLARATION:
I hereby affirm that I have a certificate of consent to self-insure, or a 'certificate of Workers' Compensation insurance, or a certified copy hereof

☐ *Certified copy is hereby furnished.*

☐ *Certified copy is filed with the City.*

☐ *Not applicable*

3. CERTIFICATE OF EXEMPTION FROM WORKERS COMP. INSURANCE

☐ *I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California*

☐ *Not applicable*

NOTICE TO APPLICANT:

If, after making any of the foregoing declarations, you become subject to any Labor Code or License Law provision, you must comply with such provisions or this permit shall be deemed revoked.

I certify that I have read this application and state that the above information is correct, I agree to comply with all city ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. Unless noted under "Special Conditions", this permit becomes null and void if work or construction authorized is not started within 180 days, or if construction or work is suspended or abandoned for a period of 180 days any time after work is commenced.

Re: 2201 Emily Street, San Luis Obispo, CA. Parcel # 004-847-001. Work Plan for Collection of Hydropunch Water Samples.

Dear Mr. Rouhani:

I have had the opportunity to review the work plan you submitted to our office dated May 22, 2008. I concur with your proposal, and would like to be present to observe the work as it progresses including the collection of any water samples. Please contact me when you have selected a contractor to perform the scope of work and a date/time to begin the work.

Please contact me at (805) 781-7383 should you have any questions or comments regarding this correspondence.

Sincerely,

D. Kerry Boyle

Dear Mr. DeBeikes:

SITE CLEANUP PROGRAM: WATER SAMPLING, PARCEL WITH APN# 004-847-001, TRIANGULAR PROPERTY AT TERMINUS OF ALPHONSO STREET, SAN LUIS OBISPO, CALIFORNIA

Central Coast Regional Water Quality Control Board (Water Board) staff have reviewed the work plan dated May 22, 2008, prepared for the above-referenced property (Site) by AB Geoscience and Environmental Consultants (AB Geoscience). Water Board staff finds the plan acceptable as presented. You are required to notify the Central Coast Water Board at least 48 hours prior to initiation of the field work. Please submit a report describing the field investigation and sampling results **by July 18, 2008**.

The Water Board's requirement for this information is made pursuant to the provisions of Section 13267 of the California Water Code (CWC). Pursuant to Section 13268 of the CWC, a violation of a request made pursuant to CWC Section 13267 may subject you to civil liability of up to $1,000 per day.

The Water Board needs the requested information to evaluate this discharge of petroleum hydrocarbons to the environment. You are required to submit this information because petroleum hydrocarbons have been detected in soil at the site and you are responsible for the discharge. More detailed information is available in the Central Coast Water Board's public file on this matter.

Any person affected by this action of the Water Board may petition the State Water Resources Control Board (State Water Board) to review the action in accordance with section 13320 of the CWC and Title 23, California Code of Regulations, Section 2050. The petition must be received by the State Water Board within 30 days of the date of this order. Copies of the law and regulations applicable to filing petitions will be provided upon request.

If you have any questions, please call **Rich Chandler at (805) 542-4627** or Chris Adair at (805) 549-3761.

Sincerely,

Roger W. Briggs
Executive Officer

Soil sampling at site: Large stockpile contained 8 composite soil samples. Small stockpile took 3 composite soil samples. Contaminated soil stockpile - collected 3 samples for profile purposes. South end of excavation - 1 sidewall sample 1 bottom sample collected for verification of clean up. Note: North boundary of site is cleaning up nicely. Also a plume well was located during E. visit

Irvine, CA 92604

Re: Closure Letter for Site Remediation Conducted at Parcel # 004-847-001 Triangular Property at Terminus of Alphonso Street.

Dear Mr. DeBeikes:

After review of the site remediation activities at this site including soil samples and hydropunch wells, I am issuing you this site closure letter. A considerable volume of contaminated soil was removed from the site with verification soil samples collected to document the clean status. Additionally, hydropunch wells were installed at 5 locations to determine the status of groundwater and possible impacts to groundwater. The shallow wells did not recharge enough to collect a sample and were properly abandoned.

Therefore, provided that all information regarding the site assessment/remediation is current and correct, no further action at the site is required. Please be advised that should contamination be discovered in the future additional assessment/remediation will be required. Thank you for your considerable efforts in abating the contamination at this site. Should you have any questions or concerns regarding this correspondence please contact me at (805) 781-7383.

Sincerely,

D. Kerry Boyle

Mr. James Diel
Union Pacific Railroad
9451 Atkinson Street, Suite 100
Roseville, CA 95747

Re: Union Pacific Railroad, Former Pond Site @ Terminus of Alphonso St., San Luis Obispo, CA – Closure Letter for Site Remediation Project

Dear Mr. Diel:

I have received the final report for the site remediation work conducted at the former pond area at the location mentioned above. Our target for clean up of contaminated soil was 500 parts per million for Total Petroleum Hydrocarbons. While on site, contamination was noted to extend further south and additional soil was removed. Upon reviewing the analytical results, it was noted that there were two samples slightly higher than the agreed upon clean up level (720 ppm, and 670 ppm). Based on the volume of soil removed, the positive soil analytical results, the absence of groundwater, and the slightly elevated levels of soil contamination left in place, I agree that site closure for this investigation is warranted. Therefore, assuming that the information provided to SLO City Fire was accurate and representative of existing conditions, it is the position of this office that no additional soil sampling or clean up of this site is required.

It should be noted that this letter does not relieve the property owner of any responsibilities mandated under the California Health and Safety Code if existing, additional or previously unidentified soil and/or groundwater contamination is discovered. This project can be considered closed with no further action required.

Please feel free to call me with any questions you may have regarding this matter at (805) 781-7383.

Sincerely,

D. Kerry Boyle

Dear Mr. Boyle:

Re: Soil Excavation Work Plan
Union Pacific Railroad
San Luis Obispo, CA - Former Pond Site
Terminus of Alphonso Street
San Luis Obispo, California

On behalf of Union Pacific Railroad (UPRR), Conestoga-Rovers & Associates (CRA) is submitting this *Soil Excavation Work Plan* (Work Plan) for the Former Pond Site located at the terminus of Alphonso Street, San Luis Obispo, California (Figure 1).

This Work Plan presents a scope of work which proposes limited soil excavation of approximately 500 cubic yards as the preferred remedial alternative to reduce petroleum hydrocarbon concentrations in soil to below clean up goals. The soil degradation resulted from the temporary use of two unlined wastewater evaporation ponds approximately 50 years ago. These ponds were primarily located on the adjacent property where a similar soil removal action was recently successfully performed. However, a portion of impact remains on the UPRR property.

CRA performed fieldwork which defined the extent of remaining impact (approximately 500 cubic yards) and presented the results in the *Subsurface Investigation Report* dated June 25, 2008. Subsequently, an Excavation Work Plan was requested by the City of San Luis Obispo Fire Department (SLOFD) in a letter dated July 7, 2008 (Attachment A). The site background and CRA's proposed scope of work are presented below.

1.0 SITE BACKGROUND

The site is currently vacant lot, located between the tracks and Assessor's Parcel No. 004-847-011 (adjacent property to the west) in San Luis Obispo, California. One small concrete structure is located on the parcel and is reportedly called the Former SPRR Oil House. Two evaporation ponds were active on the adjacent property to the west between approximately 1949 and 1956. The ponds were apparently used for wastewater evaporation and were removed from service and backfilled at the same time as the Southern Pacific Railroad (SPRR) roundhouse was demolished, around 1959. The former ponds extended slightly onto the current UPRR property (site). The ponds were backfilled and graded to match the existing grade of the surrounding parcels. Surrounding land use in the area consists primarily of commercial and industrial properties (Figures 1 and 2).

2.0 PREVIOUS INVESTIGATIONS

Adjacent Site (APN 004-847-011) 2007 December

In December 2007, Earth Systems Pacific performed an investigation on the former SPRR property to the west in the area of the former ponds. Earth Systems excavated 12 trenches to a maximum depth of 12 feet below grade (fbg) and advanced five soil borings to a maximum depth of 20 fbg. Total recoverable petroleum hydrocarbons (TRPH) were detected at concentrations up to 160,000 milligrams per kilogram (mg/kg) in soil samples collected from the trenches and borings. Lead was detected in soil at a maximum concentration of 130 mg/kg. No benzene, toluene, ethyl-benzene, or xylenes (BTEX), total petroleum hydrocarbons as gasoline (TPHg), or total petroleum hydrocarbons as diesel (TPHd) were detected in soil samples.

In February 2008, AB Geoscience and Environmental Consultants conducted soil removal remedial action in the former pond area in conjunction with access road construction. During soil removal action, CRA observed that the contractor had poured a concrete slurry wall on the reported surveyed property line and was removing soil west of, and up to the wall, down to bedrock.

Soil Borings 2008 May

In May 2008, CRA advanced ten soil borings to assess the extent of any petroleum hydrocarbon impact to soil east of the current UPRR property line (slurry wall). Soil borings SB-1 through SB-10 were drilled to approximately 20 fbg. Based on field observations, one hand auger location (HA-1) was selected for sampling. Diesel range organics (DRO) was detected in soil from six borings with a maximum concentration of 5,600 mg/kg in boring SB-3 at 10 fbg.

Extractable fuel hydrocarbons (EFH), which includes C8 through C40 ranges, was detected in soil from six borings with a maximum concentration of 5,700 mg/kg in boring SB-3 at 10 fbg. Oil range organics (ORO) was detected in soil from three borings with a maximum concentration of 6.0 mg/kg in boring SB-8 at 10 fbg. The soil sample collected from HA-1, located at the property line on the side wall of the adjacent properties excavation (10-ft bgs), detected DRO, ORO, and EFH at concentrations of 900 mg/kg, 750 mg/kg, and 1,600 mg/kg, respectively. No gasoline range organics (GRO), benzene, toluene, ethyl-benzene, xylenes, or any other fuel oxygenate was detected in any of the soil samples. Of the three soil borings located near the former oil house, only SB-10 had any impact (DRO at 930 mg/kg). The results of this investigation are presented in CRA's *Subsurface Investigation Report* dated June 25, 2008.

3.0 AREAS OF CONCERN

The areas of concern at the site include the property line to the west along the edge of the former ponds in between soil borings SB-3 and SB-5 and the area of the former SPRR Oil House building near soil boring SB-10. The constituents of concern (COCs) are total petroleum hydrocarbons as crude oil (TPHco), total petroleum hydrocarbons as motor oil (TPHmo), total petroleum hydrocarbons as diesel (TPHd).

4.0 CLEAN UP GOAL

The February 2008 soil removal remedial action on the adjacent property (which removed the majority of the impact) used 1,000 mg/kg TPHco as a clean up goal. CRA proposes to use 500 mg/kg TPH (either diesel, motor oil, or crude oil). Lighter fraction fuels have been shown not to be present. Groundwater is not present.

5.0 PROPOSED SCOPE OF WORK

CRA will oversee a limited soil excavation remedial action to reduce petroleum hydrocarbon concentrations in soil to below clean up goals (Figure 2). Previous investigation data suggests that hydrocarbon impacted soil is present on-site along the property line near the former pond and in between soil borings SB-3 and SB-5 and the former oil house near soil boring SB-10. The impacted soil is covered by up to 10-feet of clean over-burden soil (fill). Based on analytical data from recent borings CRA estimates that excavating up to 500 cubic yards of hydrocarbon impacted soil to approximately 20 fbg will remove impact to below clean up goals. To control costs, clean overburden soil will be reused as backfill material.

on Underground Tank Update,

City of San Luis Obispo

990 Palm Street/Post Office Box 8100 • San Luis Obispo, CA 93403-8100

(805) 549-7140

January 6, 1988

MEMORANDUM

To: Honorable Mayor and Members of the City Council

From: Anne M. Russell, Assistant City Attorney AMR

Subject: Discovery of Contamination from Underground Gasoline Tank at former City of San Luis Obispo Water Yard, 1330 Buchon Street, San Luis Obispo, CA

Upon completion of construction of the new Corporation Yard, the existing yards at 642 Emily Street and 1330 Buchon Street were vacated. Resolution No. 5173 authorized sale of these yards. By Resolution No. 5753, the City Council accepted a proposal from Mr. Mark Godfrey to purchase the property for $135,550. Mr. Godfrey is currently paying on an $88,107.50 promissory note for the balance of the purchase price. Escrow closed on October 2, 1985.

At the time of the sale, there was an existing underground gasoline tank, which was not described in the sale offering, but was obvious due to the above ground fuel dispenser. The existence of the underground tank did not become an issue until the Fire Department started enforcing the underground tank regulations, which require removal of abandoned underground tanks, installation of monitoring devices for tanks in use, and clean up of any contamination. The City resisted initial requests from Mr. Godfrey to assume responsibility for the monitoring or removal of the tank, relying on the "as is" provision in the sales contract. However, after removal of the tank, it was determined that there was some contamination. Mr. Godfrey's attorney filed a claim against the City of San Luis Obispo for failure to disclose the existence of the tank and/or the legal requirements attendant to an owner of property containing such a tank. The claim was rejected as late, and an application to file a late claim was subsequently filed. The application has been denied by operation of law, but I have directed the City Clerk's office not to send any notification to the claimant's attorney until I had an analysis of what the exact problem was.

In November, 1987, the City Attorney's Office hired Pacific Geoscience to determine the vertical and horizontal extent of the contamination. On January 5, 1988, we received their report. The bad news is there is some contamination. The good news is that the area of significant contamination (high level of petroleum contamination) is of relatively small volume. There is no contamination of the underground water. The report also concluded that due to the low permeability of the soil surrounding the former tank location, existing soil contamination levels

within the site do not pose a significant threat of contamination to the groundwater beneath the site.

Mr. Godfrey's attorney has contacted the City Attorney's office and offered to resolve their pending claim by Mr. Godfrey absorbing the tank removal costs if the City would pay for removal of the contamination. The City has not yet received a bill from Pacific Geoscience, but I estimate it to be approximately $5,000, including the laboratory analyses. Randy Miller, the Fire Department employee charged with enforcement of the underground tank regulations, feels one additional boring may be necessary.

What I am asking the Council for is authority to complete clean-up of the site in an amount not to exceed $15,000. If additional money is necessary, I will come back to the Council. Randy Miller does not feel at this time that any clean-up is necessary, but suggests an additional boring and soil sampling in the center of the location where the tank was removed. In addition, Mr. Godfrey hired a consulting geologist, Leo T. Fedewa, for the initial geological services, and his bill in the amounmt of $1,304.26 needs to be paid. I would request authority to pay that bill as well. Should clean-up be needed, it appears that the amount would not need to be a formal competitive bid, but could probably be handled under the Purchasing Ordinance.

The reason for the request to absorb the clean-up costs is our office's opinion that the "as is condition" in the purchase agreement is insufficient to relieve the City of San Luis Obispo from the obligation to clean up the contamination it caused while it was the owner. In any event litigation over this matter would probably exceed clean-up costs at this time.

SUBJECT: STATUS REPORT FOR WASTE OIL TANK REMOVAL PROJECT AT THE FORMER SAN LUIS OBISPO CORPORATION YARD, EMILY STREET, SAN LUIS OBISPO, CALIFORNIA. G3211

Dear Mr. Miller,

In accordance with your request this report has been prepared to document conditions and services performed to date at the above referenced site. This firm was retained on June 2, 1987 to perform screening and sampling of soils that were being excavated from the former location of two waste oil tanks. The tanks had been removed from a location immediately to the south of a warehouse at the property. The soils exhibited visible discoloration and odors could be discerned. Screening of the soil was accomplished with an HNu photoionization meter equipped with a 10.2 volt lamp and representative soil and water samples were obtained for laboratory analysis. The results of the laboratory analysis are expected to be available the week of June 8, 1987.

During the excavation procedure, excavated soils had an average HNu meter reading of 200 ppm. As of this date the excavation is approximately 10 feet deep and has an area of approximately 260 square feet. Surface soils, as exposed by the excavation, consist of 4 feet of dark brown sandy clay overlying approximately 5 feet of highly weathered yellow brown to grey brown sandstone and shale. At the bottom of the excavation was yellow brown clayey sandstone bedrock. Small amounts of water were observed seeping from the contact between the clayey sandstone and highly weathered

sandstone/shale.

The elevated HNu meter readings could be visually correlated with the discoloration of soil and rock. The surficial clay soil was discolored to an oily brown tint and the highly weathered sandstone and shale was a dull olive green. Both of these discolored materials had discernible odors.

At this time, the limits and degree of fuel products in the soil have not been defined. The clayey sandstone bedrock exhibits no visible evidence of fuel products, however, the absence of fuel products must be verified by laboratory analysis. If laboratory analysis indicates that fuel products have not penetrated the rock, the probable depth of contamination would be at approximately 10 feet. The lateral extent of fuel products in soils surrounding the excavation has not been determined at this time. If contamination is present beneath the existing building north of the excavation, removal of this soil would be difficult because of the possibility of undermining the foundation.

In addition to the waste oil tank excavation, a second tank excavation at the site exhibits evidence of potential fuel products. A small amount of standing water was present at the time of tank removal and a sample of this water is undergoing laboratory analysis.

It is the opinion of the undersigned that further excavation in both potentially contaminated tank locations will be necessary, assuming that laboratory analysis indicates that the soils contain levels of hydrocarbons that exceed those recommended by the governing jurisdiction. If this proves to be the case, an on-site treatment program of aeration and possibly bioreclamation appears reasonable and can be discussed in further detail when the results of the laboratory analysis are available. The analysis should be complete late in the week of June 8-12, 1987.

Thank you for retaining the services of this office. If you have any questions, please contact this office at your convenience.

Yours Truly,

PACIFIC GEOSCIENCE, INC.

SUBJECT: STATUS REPORT NUMBER 2 FOR THE WASTE OIL TANK REMOVAL PROJECT AT THE FORMER SAN LUIS OBISPO CORPORATION YARD, EMILY STREET, SAN LUIS OBISPO, CALIFORNIA. G3211

Dear Mr. Miller,

This is status report No. 2 for the tank removal project at the above referenced site. At this time laboratory analysis by Central Coast Analytical Laboratories has been completed for the soil and water samples collected June 3 and 4, 1987. Presented in the table below is a summary of the laboratory results. Copies of the laboratory test results are attached as is a site map showing sampling locations.

Substance (Concentrations in mg/kg)	Action Level Water	Soil	Sample Number 1	2	5	6	7
Benzene	.0007	.07	NF	0.4	1.2	0.0001	NF
Chlorobenzene	----	----	NF	0.4	NF	NF	NF
Ethylbenzene	1.4	140.	1.1	6.4	0.2	NF	0.016
Toluene	0.1	10.0	NF	0.4	0.7	NF	NF
Xylenes	0.62	62.0	5.0	16.0	1.6	0.0006	0.041
TPPH	-----	100.0	370	790	15.0	0.190	12.0
Lead	-----	1000.	----	----	----	----	0.7

NOTES: ---- indicates not run or not applicable. NF indicates below detection limits. Samples No. 3 & 4 were duplicate waste oil tank samples.

Samples No. 1, 2, and 5 were obtained from the waste oil tanks excavation. Samples No. 3 and 4 were duplicate samples from the waste oil tank location and were not tested. Sample No. 1 was a soil sample tested for petroleum hydrocarbons and for CAM metals. This sample was below City of San Luis Obispo action limits for substances detectable by the fuel fingerprint method. However it exceeded the action limits for total petroleum hydrocarbons. The results of the CAM analysis indicated that the sample was found to be below the Total Threshold Limit Concentrations for the metals investigated. Soil sample No. 2, had concentrations of benzene that exceeded the action limits of the City of San Luis Obispo. Concentrations of other tested substances were below action limits. Sample No. 5 was of water that had seeped into the slough at the bottom of the waste oil tanks excavation. This sample exceeded City of San Luis Obispo standards for benzene, toluene, and xylenes in water. The other tested substances were below action level concentrations. Sample No. 5 was taken at the client's request. It is the undersigned's opinion that this latter sample is not a representative sample and the laboratory data for it should not be utilized for site characterization purposes.

As can be seen from the table above, Sample No. 6 from the east excavation and Sample No. 7 from the central excavation have concentrations below City of San Luis Obispo action levels. However, the sample for the central excavation was of water puddled around the tank. The granular backfill surrounding the tank was characterized by discoloration, odor, and photo-ionization readings > 100 ppm (As determined on an HNU Systems Model PI 101 as calibrated for benzene).

It seems reasonable to conclude that the east tank locations is not contaminated since the photo-ionization readings and laboratory analysis of a representative soil sample did not indicate significant soil contamination. The central tank location has contaminated granular backfill as evident by the photo-ionization readings. This backfill material should

be removed and treated along with the excavated soils from the waste oil tanks location.

It is recommended that representative photo-ionization readings be performed by this firm before the end of June 1987. This should provide some indication of the effectiveness of the aeration program.

Thank you for this opportunity to have been of service. If you have any questions or require further services please contact this office at your convenience.

Yours Truly,

MEMORANDUM

TO: Dave Romero, Director of Public Works

FROM: R. K. Miller, Hazardous Materials Inspector

DATE: March 4, 1988

SUBJECT: 642 Emily Underground Tanks

On Monday, 2/29/88, I was informed by Speeds Oil Tool Service as to the delinquency of Mr. Russell's bill.

Mr. Russell was contracted by the City for removal of the underground tanks located at 642 Emily (old City Corp Yard). Speeds was sub-contracted by Russell Excavation to "triple rinse" the underground tanks upon removal. As I indicated on the invoice, dated 6/4/87, Mr. Russell has not paid his bill.

Roger Picquet was contacted by myself prior to Speeds letter and later, after Roger was contacted by Speeds to seek assistance regarding the bill.

Roger has suggested that the City Public Works Department make payment to Speeds and that the City will attempt to collect payment from Mr. Russell through administrative channels.

Attached is the invoice for payment. Please contact Roger Picquet or myself should you have any questions.

RE: Site Closure - 2540 Victoria Ave.

Dear Mr. Fedewa:

I have received the analytical report dated December 19, 1993, for the San Luis Garbage site. After reviewing this report, it has been determined that all significant soil contamination associated with these tanks and pipes has been removed. Also, all required documentation has been received. Therefore, assuming that the information provided was accurate and representative of existing conditions, it is the position of this office that no additional sampling or cleanup of this site is required.

It should be noted that this letter does not relieve the property owner of any responsibilities mandated under the California Health & Safety Code if existing, additional or previously unidentified contamination is discovered.

Additionally, with regard to the soils currently being stockpiled/remediated at the Cold Canyon site, please provide this office with updates or a schedule for sampling.

If you have any questions regarding this matter, please call me at 781-7380.

Sincerely,

Michael Smith
Hazardous Materials Coordinator

1/8/93

Mr. Michael Smith
City of San Luis Obispo
Fire Department
748 Pismo Street
San Luis Obispo, CA 93401

RE: San Luis Garbage, 2540 Victoria Avenue, San Luis Obispo, California

On November 18, 1992, two underground storage tanks (UST) were removed from the referenced site by B & T Service Station Contractors (B&T) of Arroyo Grande, California. These tanks stored gasoline and diesel fuels, which were dispensed for San Luis Garbage Company vehicles. During the removal of the UST and the dispenser equipment, Cuesta Geotechnical, contracted by B&T, identified and assessed the extent of the gasoline and diesel contaminated soil. Cuesta Geotechnical recommended to B&T which gasoline and diesel contaminated soil to excavate. The attached site map shows the locations of soil samples that were obtained and laboratory analyzed during the assessment of the contaminated soil. All soil samples were analyzed for Benzene, Toluene, Ethylbenzene, Xylenes, and Total Petroleum Hydrocarbons for Gasoline and Diesel using EPA method 8260. The initial soil samples obtained for analyses were also tested for Total Lead using EPA method 7420. Attached Table No. 1 shows the results of the laboratory analyses.

The excavated soil was stored on-site until laboratory analyses were obtained (see Table No. 2). Based on the results of the analyses, the soil was delivered to Cold Canyon Land Fill, Edna Road, San Luis Obispo County, which is also owned by the owner of the San Luis Garbage Company. The property owner is currently bioremediating the soil.

During removal of the UST, ground water filled a portion of the excavation. A sample was obtained and analyzed using EPA method 8260. Benzene and

Total Petroleum Hydrocarbons for Diesel were found in concentrations of 20 and 50,000 parts per billion, respectively, both levels above the drinking water limit. Toluene, Ethylbenzene, Xylenes, and Total Petroleum Hydrocarbons for Gasoline were found in levels below the drinking water limit. Attached Table No. 2 shows the results of the laboratory analysis.

The sedimentary section at this site is as follows; brown and gray clayey sediments, approximately 9 feet thick, overlying fractured gray claystone, approximately 3 feet thick, that rests on a gray claystone bedrock. The appearance of this section indicates a well would have a low yield. .

The laboratory's report sheets and the work procedure followed by Cuesta Geotechnical as outlined in its Quality Assurance and Quality Control Plan are attached. Please call Cuesta Geotechnical at (805) 543-4084 if you have any questions regarding this correspondence.

Sincerely,

Leo T. Fedewa
Consulting Geologist

RE: Underground Tank Removal - 3584 Victoria (Rizzoli's Automotive)

Dear Mr. Rizzoli:

Based on the analytical data provided by Geoservices regarding the underground tanks removed at 3584 Victoria, it has been determined that all significant soil contamination has been removed and/or remediated. Also, all required documentation has been received.

Therefore, assuming that the information provided was accurate and representative of existing conditions, it is the position of this department that no additional sampling or clean-up of this site is required.

Please be advised that this letter does not relieve you of any responsibilities mandated by the California Health & Safety Code if additional or previously unidentified contamination is discovered at this location.

If you have any questions regarding this matter, please call me at the above number.

Very truly yours,

Michael Smith

Subject: Rizzoli's Automotive, 2584 Victoria Street, San Luis Obispo, California

Dear Mr. Smith:

This letter presents the project background and the results of a soil aeration operation at the above-referenced site. The purpose is to present the San Luis Obispo Fire Department (SLOFD) with a complete review of activities on site and to recommend that remedial activities be discontinued and that all active files be closed.

Project Background

On February 21 and 22, 1989, one 1,000-gallon diesel underground storage tank (UST) and one 250-gallon waste oil UST were removed from the site by Negranti Construction of Cayucos, California. Under the direction of the SLOFD, a total of 12 soil samples were collected from the tank pits and spoils piles and analyzed for total petroleum hydrocarbon (TPH) and benzene, toluene, total xylene, and ethylbenzene (BTXE) concentrations. In addition, a ground water sample was collected from the bottom of the tank pit formerly occupied by the 1,000-gallon UST.

Soil samples were analyzed for TPH in accordance with EPA Method 418.1 or modified EPA Method 8015 and for BTXE in accordance with EPA Method 8020 (See Table 1). The water sample was analyzed for TPH and BTXE in accordance with modified EPA Method 8015 and EPA Method 602, respectively. One soil sample from the tank pit formerly occupied by the 1,000-gallon UST was analyzed for total lead in accordance with EPA Method 7420.

Soil containing concentrations of TPH or BTXE was removed from the tank excavations and stockpiled onsite. Soil samples were collected from the tank excavations and analyzed for TPH in order to confirm that all soil containing petroleum hydrocarbons had been removed. Soil with TPH concentrations below 1,000 milligrams per

kilogram (mg/kg) was hauled to a Class II Landfill in San Luis Obispo County.

Soil with TPH concentrations above 1,000 mg/kg was stockpiled onsite in a fenced, locked area east of Rizzoli's Automotive parking lot. The soil was spread over visqueen to a thickness of approximately 6 - 12 inches. A berm encompassing the aerating soil was constructed from clean soil to prevent surface drainage from leaving the aeration site.

Results of Aeration Process

On June 14, 1989 four soil samples were collected from the aeration pile. The samples were composited into one sample prior to laboratory analysis and analyzed for total recoverable petroleum hydrocarbons (TRPH) in accordance with EPA Method 418.1. Laboratory analysis of the composite sample revealed TRPH concentrations to be greater than 1,000 mg/kg. Upon approval by the SLOFD the aeration process was allowed to continue.

Three (composite) soil samples were collected from the aeration pile, composited into one sample and analyzed for TRPH in October, 1989. Laboratory analysis of the composite sample revealed TRPH concentrations to be 74 mg/kg.

These results indicate that petroleum hydrocarbons have been removed from the soil and have reached, through the aeration process, levels acceptable to the Local and State regulatory agencies. Based on these findings, GeoResearch recommends that remedial activities at the referenced site be discontinued and that all active files be closed. GeoResearch requests on behalf of the property owner, permission to leave the aerated soil in place.

Should you have any questions, please call me at 546-9100.

Respectfully,

Matthew P. Jackson
Geologist

Subject: **Quarterly Groundwater Monitoring**
Albertson Property, Emily Street & Roundhouse Road,
San Luis Obispo, California

Dear Mr. Boyle:

AB Geoscience & Environmental Consultants (AB) was retained by DeBeikes/Halferty Company to perform the quarterly groundwater monitoring at Albertson property located at south of Emily Street and Roundhouse Road in city of San Luis Obispo, California. The aforementioned activities are performed as the second phase of an approved Remedial Action Plan (RAP) for this property. AB is pleased to submit a copy of this report for your review and approval.

If you have any questions regarding this report, please do not hesitate to call us at (949) 499-0799.

Respectfully submitted,

AB Geoscience & Environmental Consultants

1.0 INTRODUCTION

1.1 Purpose

AB Geoscience & Environmental Consultants (AB) was retained by Halferty-DeBeikes to perform quarterly groundwater monitoring and sampling for the proposed "Village at Maymont" project (Village) in Albertson's property located on southeast of Emily Street and Roundhouse Road, in city of San Luis Obispo, California (Figure 1).

1.2 Objectives

This investigation was conducted as the second quarterly groundwater monitoring requested by Regional Water Quality Control Board, Central Region (Water Board).

1.3 Scope of Services

The scope of work performed to accomplish the aforementioned objectives is as follows:

- Prepare a health and safety plan,
- Purge the existing groundwater monitoring wells,
- Collect groundwater samples
- Analytically test the selected groundwater samples,
- Prepare a report.

1.4 Background

The subject site is an approximately 5-acre property located southeast of Emily Street and Roundhouse Road in a mixed residential and commercial area of the city of San Luis Obispo, California. The Site is bordered by Roundhouse Road and Fire Station #1 to the north, Southern Pacific Rail Road to the east, commercial buildings and Mid-State Bank to the south, and Emily & Broad Streets to the west.

The site is a demolished vacant lot. Former structures at the Site included four building structures within the northeast portion of the property (645 and 2201 Emily Street). One hydraulic jack is reportedly located within the central building at 645 Emily Street. A concrete underground storage basin is reportedly located east of the former building at 2201 Emily Street. Three groundwater monitoring wells are installed within the property. Two drainpipes are located along South Street, south of Fire Station #1. A high-pressure gas line diagonally transverses the property along the western property line.

The Site elevation is approximately 220 feet above mean sea level (MSL). The surface topography is approximately flat with a gentle slope toward southwest.

1.5 Previous Site Investigations

During 1992, SECOR performed a site investigation on the portion of the site covering the 645 and 2201 Emily Street properties. SECOR reported the presence of elevated concentrations of total recoverable petroleum hydrocarbons (TRPH), toluene, ethylbenzene and total xylenes near the former oil-water separator and concrete basin/filter plant, located at 2201 Emily Street as well as presence of Total Lead near a former paint shed at 645 Emily Street. SECOR recommended additional investigation to delineate vertical and lateral extents of the impacted soil.

Converse Consultants Orange County (Converse) prepared a Phase I Environmental Site Assessment (ESA) on September 19, 1995, and concluded that the site had been impacted by current and/or historical conditions. Converse recommended the potential environmental impact to the groundwater quality and soil should be further investigated.

Converse performed an initial Phase II Environmental Site Assessment to further evaluate the site and prepared a report dated February 29, 1996. In this report, Converse concluded that the subsurface soils at the property have been impacted by petroleum hydrocarbons and metals in isolated areas, and that 1,2, -dichloroethane, Lead, Chromium and Nickel were present in the groundwater at levels above the State of California Maximum Contaminant Levels (MCL). Converse recommended that: Further investigation be performed and the hydraulic hoists, surface drains and the paint storage building at 645 Emily Street should be removed. Additionally, all subsurface piping, and the concrete structure associated with the Southern Pacific Railroad concrete basin/filter plant should also be removed. Areas with concentrations of previously detected compounds in excess of regulatory limits should either be: removed, treated in-place, or a risk assessment should be performed to quantify the potential impact the soil, water, and/or vapors, may have on the environment and/or human health.

Converse also performed an additional site investigation and groundwater sampling, which was reported on March 15, 2002. In this report, Converse concluded that the groundwater beneath the property has been impacted by Chromium; subsurface soil has been impacted by petroleum hydrocarbon, Chromium, Lead and Nickel; and asbestos-containing material and Lead based paint are present at existing buildings within the property. Converse recommended that: 1) additional site investigation be performed to evaluate the lateral and vertical extents of known soil contamination and hazardous waste characterization including Hexavalent Chromium, Lead and Nickel. 2) a human risk evaluation be performed to establish parameters for the risk assessment in consultation with the local regulatory agencies, and 3) the project design team be consulted in evaluation of feasible remedial alternatives for the site.

AB

2.0 FIELD WORK

2.1 Health and Safety Plan

A site-specific health and safety plan was prepared to discuss the health and safety issues related to the condition of the Site and drilling activities. Prior to drilling, daily health and safety meeting was held, and health and safety issues related to the condition of the Site and drilling activities were discussed with the drilling crew.

2.2 Groundwater Elevation Measurements

Groundwater levels were obtained in each well prior to groundwater sampling. After noting the time and date, the static water level in the groundwater monitoring wells were measured with respect to the TOC using an interface probe marked with divisions allowing measurements to the nearest 0.01 feet. The interface probe and associated measuring tape were washed in a solution of warm tap water and a non-phosphate detergent and rinsed with de-ionized water prior to purging and collecting samples at various groundwater monitoring wells in order to reduce the possibility of cross-contamination. Results of groundwater depth elevation were used to calculate the groundwater surface elevation in feet and preparation of a groundwater elevation map for the Site (Figure 3).

The groundwater elevation contour map indicates that the direction of groundwater movement is towards west. The vertical gradient between shallow and deep water bearing zones in the eastern part of the property is approximately 0.5 foot with a positive gradient (The deeper zone has a lower elevation) and approximately 0.5 foot with a negative gradient the western portion of the property (Lower zone has a higher elevation). The horizontal gradient of the upper water bearing zone is approximately 0.057 foot per foot for the upper zone and 0.052 foot/foot for the deeper zone.

2.3 Groundwater Sampling

On September 11, 2006, groundwater monitoring wells were purged using a Grundfos submersible pump (Pumping System) until the wells became dry. During purging, temperature, pH, and conductivity of the purged groundwater were monitored over time and noted on groundwater purging and sampling logs (Appendix D).

On September 12, 2006, after assurance of the recovery of the groundwater monitoring wells to 80 percent of its initial elevation, groundwater samples were collected from each well. Groundwater sampling of the wells were accomplished by lowering a new and clean disposable polyethylene bailer approximately 2 feet into the water column of the well. Groundwater samples were collected in four 40-milliliter Volatile Organic Analysis (VOA) vials and one plastic bottle (for metals) via a flow control device inserted into the bottom of the bailer for VOC analysis. All sample containers were examined to ensure that no

AB

headspace remains after sampling. The samples were sealed, labeled with sample identification, date, time of sampling and the project number. The groundwater samples were placed in bubble-wrap and immediately placed into a chilled ice chest containing frozen blue and crushed ice.

The Grundfos pumping system were decontaminated prior to and between purging groundwater monitoring wells to reduce the possibility of cross-contamination. The pumping system and its associated water hose were decontaminated by placing the pump in a 35-gallon drum containing tap water and a non-phosphate cleanser, followed by a 35-gallon drum containing distilled water. Once the submersible pump displaced the water from the drums, the exterior of the tubing and the reel were also rinsed with distilled water. The pump, it's associated water hose, and electrical cables were rinsed with deionized water. This procedure was followed to ensure that the interior and exterior of the tubing attached to the pump is properly decontaminated. As a final precautionary measure, the bottom of the submersible pump was opened and the water within the pump was replaced with ultra pure deionized water.

The laboratory performed matrix spikes, matrix spike duplicates, method blanks, check samples and standards in accordance with the Regional Water Quality Control Board (RWQCB) Well Investigation Program (WIP) guidelines to provide a measure of the potential positive interference by the laboratory procedure and analytical testing methods.

2.9 Waste Handling

The water generated during purging, water sampling and decontamination were placed in DOT approved 55-gallon drums. All drums were labeled with drum content, date, well number, site address, project number and site representative phone number and transferred to the onsite drum storage areas awaiting the analytical test results of soil and groundwater samples for proper recycling or off-site disposal.

AB

3.0 LABORATORY ANALYSIS

All collected groundwater samples were analytically tested for:

- BTEX, MTBE, DIPE, TAME, TBA, ETBE, and TVPH with a gasoline standard, using EPA Method 8260B
- Groundwater samples collected from shallow wells were also tested for presence of Lead, Nickel, and Total Chromium using EPA method 6010.

AB

4.0 DISCUSSION

Groundwater sample collected from groundwater monitoring wells W-1 through W-4 were analytically tested for the presence of TPH-G, BTEX, MTBE, DIPE, TAME, TBA, ETBE,; and groundwater samples collected from shallow wells were analytically tested for the presence of Lead, Nickel, and Total Chromium.

The analytical test results of this sample (Table 3 and Appendix E) indicates that:

- No concentration of TPH-G was detected above laboratory PQL of 50 microgram per Liter (ug/L) in groundwater samples,
- No concentration of Benzene was detected above laboratory PQL of 1 (ug/L) in groundwater samples,
- No concentration of Ethylbenzene was detected above laboratory PQL of 1 ug/L in groundwater samples,
- No concentration of Toluene was detected above laboratory PQL of 1 ug/L in groundwater samples,
- No concentration of Total Xylenes was detected above laboratory PQL of 3 ug/L in groundwater samples,
- No concentration of MTBE was detected above laboratory PQL of 2 ug/L in groundwater samples,
- No concentration of DIPE was detected above laboratory PQL of 2 ug/L in groundwater samples,
- No concentration of TAME was detected above laboratory PQL of 2 ug/L in groundwater samples,
- No concentration of TBA was detected above laboratory PQL of 10 ug/L in groundwater samples,
- No concentration of ETBE was detected above laboratory PQL of 2 ug/L in groundwater samples,
- Total Chromium with maximum concentration of 0.023 mg/L was detected at groundwater sample W-1-10',
- Nickel with maximum concentration of 0.050 mg/L was detected at groundwater sample W-1-10',
- No concentration of Lead was detected above laboratory PQL of 0.005 mg/L in groundwater samples,

AB

5.0 CONCLUSIONS

Based on the results of data collected during this site assessment the following conclusions are made:

Analytical test results of the collected groundwater samples from new groundwater monitoring wells indicate that no concentration of TPH-G, BTEX, MTBE, DIPE, TAME, TBA, and ETBE, and Lead were detected above laboratory practical quantitation limit (PQL). Total Chromium with concentration of 0.023 mg/L were detected in water sample collected from groundwater monitoring well W-1-10', which is considerably lower than 0.1 mg/L recommended as MCL for drinking water. Nickel with concentration of 0.05 mg/L were detected in water sample collected from groundwater monitoring well W-1-10', which is considerably lower than 0.730 mg/L recommended by Region 9 PRG for tap water.

Therefore, it can be concluded that the existing groundwater at both shallow and deep water bearing zones are not impacted by petroleum hydrocarbon, VOCs or metals beneath this property.

AB

6.0 RECOMMENDATIONS

Based on the results of data collected during this and previous site assessment and taking into the account that all petroleum and metal impacted soil within the property are excavated and removed from the site, we recommend that the existing groundwater monitoring wells be abandoned.

AB

6.0 LIMITATION

This report is prepared for the sole benefit and use of, and may be relied upon only by, DeBeikes/Halferty. This report has been conducted in accordance with current practice and the standard of care exercised by geologist and engineers performing similar tasks in this area.

The conclusions and recommendations are based solely upon chemical analysis performed on the groundwater samples collected at the specified locations. The results and observations presented herein are considered to be representative of the area of investigation, however, soil and local groundwater conditions may vary significantly between borings. If actual conditions differ from those described in this report our office should be notified.

All work has been conducted in accordance with generally accepted practices in the fields of environmental engineering, geology, and hydrogeology that exist in this or similar localities at this time. This report is an opinion work and the registered geologist's certification of conditions comprises a declaration of his or her professional judgment and it doe's not constitute a warranty or guarantee, expressed or implied, regarding the conclusion, recommendations, and professional opinions presented at this report, nor does it relieve any other party of its responsibility to abide by contract documents, applicable codes, standards, regulations, and ordinances.

FIRE DEPARTMENT
2160 Santa Barbara Avenue • San Luis Obispo, CA 93401-5240 • 805/781-7380

"Courtesy & Service"

November 22, 2006

Mr. Richard DeBeikes, President
DeBeikes Investment Company
5289 Alton Parkway
Irvine, CA 92604

Re: 645 & 2201 Emily Street, San Luis Obispo, CA – Case Closure.

Dear Mr. DeBeikes:

I have received and reviewed the Remedial Activities and Closure Report submitted November 7, 2006 by your consultant Amir Rouhani of AB Geoscience. I spent a considerable amount of time in the field monitoring the on-going site remediation activities and soil verification sampling. Hydrocarbon impacted soil along with small areas of Lead, Chromium, and Nickel impacted soil were removed and properly disposed of. Based on these results the San Luis Obispo City Fire Department is closing this site investigation/remediation project with no further action required. Please note that the Regional Water Quality Control Board should be contacted regarding guidance on the groundwater monitoring wells.

If additional contamination or previously unknown contamination is discovered at the site we will require additional characterization of the contamination and possible remediation. Should you have any questions or concerns regarding this correspondence please contact me at (805) 781-7383.

Sincerely,

D. Kerry Boyle

4.0 REMEDIAL ACTION

Based on the comparison of various alternatives for remediation of the TPH, VOCs, and Lead impacted soil, the alternative of "Selective Excavation and Off-site Disposal" was selected for remedial action at this site.

4.1 Permits

Prior to initiation of the field activities the following permit applications were filed and approval were obtained from regulating agencies:

- Air Quality Management District (AQMD) Rule 1166 Permit for excavation of TPH and VOC impacted soil,
- Permit for disposal of the excavation related generated water (if any) into sewer system from Sanitation Department of the City of San Luis Obispo
- Appropriate well abandonment and well construction permits,

4.2 Preparation for Excavation

48 hours prior to the initiation of excavation activity, Underground Service Alert (Digalert) was notified and the outline of the excavation areas was marked with white paint. The work zone were defined and Exclusion Zone, Contamination Reduction Zone, Support Zone, and, Safe Zone were delineated using appropriate signs and barricades.

4.3 Health and Safety Plan

A Site Specific Health and Safety Plan was prepared and during daily meetings content of the Health and Safety Plan (HASP) was explained to the personnel working onsite. The health and safety plan addressed the "worst case" situation regarding potential chemicals and physical hazards with respect to worker safety; Hazard Control Level; type of Personal Protective Equipment (PPE) for each level; training requirements for employees; air monitoring requirements; work periods/rest breaks; and emergency contacts and procedures.

The HASP described in detail the Exclusion Zone, the Contamination Reduction Zone, personnel decontamination procedures, equipment decontamination process, the Support Zone (i.e., safe zone), and placement of Wind Indicators upwind of the Contamination Reduction Zone.

4.4 Excavation of TPH and VOC Impacted Soil

4.4.1 UST Area

The TPH and VOCs impacted soil in the vicinity of former USTs (Figure 2), which was defined in FS/RAP, was excavated to a depth of five feet bgs using a backhoe. During this excavation the shallow soil containing TPH and VOCS within the top three feet of soil was removed and was placed on plastic lined area as "Contaminated Soil Stockpile".

AB

Confirmation soil samples C-8 through and C-10, collected from the depth of four feet bgs at northern part of the excavation pit, indicated that further excavation is necessary at this location. After excavating the soil to a depth of 5 feet bgs, confirmation soil samples C-11 and C-12, and verification soil samples Verif. 1 and Verif. 2, were collected from depth of 6 feet at the bottom of the excavation pit at this location. The analytical test results of these samples confirmed that the concentrations of chemicals of Concern (COCs) were substantially below the approved clean-up criteria levels (Table 2, Figure 2, Figure 3 and Appendix B).

The stockpiled soil was then covered with plastic and was secured awaiting proper disposal to a permitted disposal facility.

The total volume of excavated soils was approximately 80 cubic yards (CY). The excavation was performed under observation of a registered geologist and under supervision of SLOFD.

The excavation was temporarily backfilled with gravel to 2.5 feet bgs followed by clean native soil to the surface. The engineered compaction of excavated pit will be performed during the general grading of the site.

4.4.2 Oil/Water Separator Related Area

The TPH and VOCs impacted soil reported in two locations west of the Railroad's former Oil/Water Separator area (Figure 2), which was defined in FS/RAP, was excavated to a depth of three feet bgs using a backhoe. During this excavation the shallow soil containing TPH and VOCS within the top three feet of soil was removed and was placed on plastic lined area as "Contaminated Soil Stockpile". The stockpiled soil was then covered with plastic and was secured awaiting proper disposal to a permitted disposal facility.

Confirmation soil samples C-13 through C-15, collected from the bottom of the excavation pits confirmed that the concentrations of chemicals of Concern (COCs) were substantially below the approved clean-up criteria levels (Table 2, Figure 2, Figure 3 and Appendix B).

The total volume of excavated soil was approximately 20 cubic yards (CY). The excavation was performed under observation of a registered geologist and under supervision of SLOFD.

The excavation was temporarily backfilled with clean native soil to the surface. The engineered compaction of the excavated pit will be performed after the general grading of the site.

AB

4.4.3 Lead Impacted Soil

The Lead impacted soil reported in two locations in the vicinity of the former Paint Booth and Clarifier (Figures 2 and 6), which was defined in FS/RAP, was excavated to a depth of three feet bgs using a backhoe. During this excavation the shallow soil containing heavy metal (Lead, Chromium, and Nickel) within the top three feet of soil was removed and was placed on plastic lined area as "Contaminated Soil Stockpile". The stockpiled soil was then covered with plastic and was secured awaiting proper disposal to a permitted disposal facility.

Confirmation soil samples C-1 through C-6, collected from the bottom of the excavation pits confirmed that maximum Lead concentrations detected in confirmation soil samples is 8 mg/kg, which is in the range of background soil and is far below the Region 9 PRG of 150 mg/kg for lead. Maximum Total Chromium concentrations detected in confirmation soil samples is 112 mg/kg, which is in the range of background soil and is below the Region 9 PRG of 210 mg/kg for lead. Maximum Nickel concentrations detected in confirmation soil samples is 220 mg/kg, which is in the range of background soil and is below the Region 9 PRG of 1600 mg/kg (Table 1, Figure 2, Figure 4, and Appendix B).

The total volume of excavated soil was approximately 30 cubic yards (CY). The excavation was performed under observation of AB's registered geologist and under supervision of SLOFD.

The excavation was temporarily backfilled with clean native soil to the surface. The engineered compaction of excavated pit will be performed after the general grading of the site.

4.5 Soil Sampling

Soil samples from the bottom the excavations pits were obtained via utilizing a decontaminated hand held auger. The soil samples were collected using a clean and decontaminated sampler equipped with four 2½-inch diameter by 3-inch long brass tubes mounted within a 2½-inch inside diameter drive sampler. The sampler was attached to a down-hole slide hammer, lowered to the specific sampling depth, and then driven 12-inches into the formation. After sample recovery, the ends of the lowest brass tube was covered with Teflon sheet and plastic caps and taped with silicon tape over the ends. The samples were labeled with sample identification, date and time of sampling and the project number, and sealed in Ziploc™ plastic bags. The samples were immediately placed into an ice chest chilled using frozen blue and/or crushed ice. The collected samples were delivered to American Scientific Laboratory (ASL), a laboratory certified in the State of California for hazardous waste testing, and in accordance with the EPA chain-of-custody procedure. Soil sampling from the excavation walls were performed by digging approximately one foot into the wall, followed by pushing a new and clean glass jar directly into the undisturbed soil. Following sample retrieval, the glass jars were sealed with a plastic lid, labeled with the sample identifications, date and time of

sampling and project number, and immediately placed into a Ziploc bag and into a chilled ice chest using frozen blue and crushed ice.

Prior to use, all sampling tools and instruments were washed in a non-phosphate cleanser solution, rinsed with tap water and then distilled water.

Verification and profiling samples from the stockpiled soil were obtained via utilizing a decontaminated hand held auger following the aforementioned procedures.

4.6 Air Monitoring

In accordance with the requirements of the original permit, and Site Health and Safety Plan, an on-site air monitoring using a Photo-ionization Detector (PID) was conducted during excavation activities. PID readings were recorded every 30 minutes in the area of the excavation, breathing level (ambient air), stockpiled soil, and property line, during daytime work activities at the Site (Appendix A).

Additionally, daily filtered sample from air (8-hour filter and tedlar bag) were collected at the property line (Appendix A). The samples were delivered to ASL a laboratory certified in the State of California for hazardous waste testing in accordance with the EPA chain-of-custody procedure.

4.7 Disposal of Contaminated Soil

TPH impacted soil was stockpiled in stockpiles # 4 and #7 and metal impacted soil was stockpiled in stockpiles # 5 and #6. Profiling samples were collected from each stockpile on the site by AB registered geologist as composite samples, as well as daily profile sampling, which were performed by disposal facility. Analytical test results of profiling samples were submitted to Santa Maria Regional Landfill for approval (Appendix B).

During September 26 and 27, 2006, a total of 190.37 tons of TPH and metal impacted soil were transported by PC INC. (via Kritz Trucking) to Santa Maria Regional Landfill located at 2065 E. Main Street, Santa Maria, CA 93454 under proper manifestation documents (Appendix C). The profiling sampling, manifest documentation and soil disposal were performed under supervision of AB's Registered Geologist and SLOFD representative.

4.0 REMEDIAL ACTION

Based on the comparison of various alternatives for remediation of the TPH and Lead impacted soil, the alternative of "Selective Excavation and Off-site Disposal" was selected for remedial action at this site.

4.1 Permits

Prior to initiation of the field activities the following permit applications were filed and approval were obtained from regulating agencies:

- Air Quality Management District (AQMD) Rule 1166 Permit for excavation of TPH impacted soil,
- Permit for disposal of the excavation related generated water (if any) into sewer system from Sanitation Department of the City of San Luis Obispo
- Appropriate well abandonment and well construction permits,

4.2 Preparation for Excavation

48 hours prior to the initiation of excavation activity, Underground Service Alert (Digalert) was notified and the outline of the excavation areas was marked with white paint. The work zone were defined and Exclusion Zone, Contamination Reduction Zone, Support Zone, and, Safe Zone were delineated using appropriate signs and barricades.

4.3 Health and Safety Plan

A Site Specific Health and Safety Plan was prepared and during daily meetings content of the Health and Safety Plan (HASP) was explained to the personnel working onsite. The health and safety plan addressed the "worst case" situation regarding potential chemicals and physical hazards with respect to worker safety; Hazard Control Level; type of Personal Protective Equipment (PPE) for each level; training requirements for employees; air monitoring requirements; work periods/rest breaks; and emergency contacts and procedures.

The HASP described in detail the Exclusion Zone, the Contamination Reduction Zone, personnel decontamination procedures, equipment decontamination process, the Support Zone (i.e., safe zone), and placement of Wind Indicators upwind of the Contamination Reduction Zone.

4.4 Excavation of TPH Impacted Soil

4.4.1 Filter Plant

The TPH impacted soil within the concrete filter plant (Figures 2 & 3), which was defined in FS/RAP, was excavated using a backhoe. During this excavation, after removal of the asphalt layer, the "concrete filter plant" was exposed. The filter plant consisted of two open basins attached to two concrete pump houses. Two 16-foot

AB

diameter circular concrete slabs as platforms for the filters were located west of the pump houses (Figure 3). The concrete structure was in a good condition with no cracks or discoloration as an evidence of leakage of the petroleum hydrocarbon from the structure.

The soil within the concrete basins and pump houses and above the circular concrete slabs was surgically excavated, scraped, and removed, and was placed on plastic lined area as "Contaminated Soil Stockpile". In addition, the soil located west of the filter area (marked as "Well Tank") was excavated to a depth of 6 feet bgs and added to the contaminated stockpiled soil.

After a through cleanup, the concrete structures we demolished and stockpiled as a separate stockpile at the site.

Confirmation soil samples C-1 through and C-4 and CS-5 and CS-6 were collected approximately two feet below the base of the concrete basin at the eastern portion of the excavation pit. Soil samples P-1 and P-2 were collected approximately two feet below the base of the concrete at the location of the pump houses. Soil samples FN FS were collected approximately two feet below the base of the circular concrete slabs. Soil sample WT was collected at a depth of 6 feet bgs at the location of the removed Well Tank. Confirmation soil samples EW, NW E, NWW, WW, SWW, and SWE were collected from the walls of the excavation pit. The analytical test results of the collected confirmation soil samples confirmed that the concentrations of chemicals of Concern (COCs) were substantially below the approved clean-up criteria levels (Tables 1 & 2, Figure 2, and Appendix C).

The stockpiled soil was then covered with plastic and was secured awaiting proper disposal to a permitted disposal facility.

The total volume of excavated soils was approximately 220 cubic yards (CY). The excavation was performed under observation of a registered geologist and under supervision of SLOFD.

The excavation was temporarily backfilled with clean native soil to the surface. The engineered compaction of excavated pit will be performed during the general grading of the site.

4.4.2 Railroad Property Line Stockpiled Soil

The TPH impacted soil reportedly stockpiled at the southern portion of the Railroad property line was also excavated (Figure 2). Trenches T-1 and T-2 were excavated to confirm the adequacy of the excavation. During this excavation the soil containing TPH within the top five of the soil was removed and was placed on plastic lined area as "Contaminated Soil Stockpile". The stockpiled soil was then covered with plastic and was secured awaiting proper disposal to a permitted disposal facility.

AB

Confirmation soil samples T-1 and T-2, collected from the bottom of the trenches confirmed that the concentrations of chemicals of Concern (COCs) were substantially below the approved clean-up criteria levels (Tables 1 & 2, Figure 2, and Appendix C).

The total volume of excavated soil was approximately 40 cubic yards (CY). The excavation was performed under observation of a registered geologist and under supervision of SLOFD.

The excavation area was temporarily maintained to match the natural slope at the location. The engineered compaction of the excavated area will be performed after the general grading of the site.

4.4.3 Clay-pipe Area

A two-foot diameter clay pipe was located south of the South Street Right-of-Way, south of the fire department property. Three trenches (T-3, T-4, and T-5) excavated along the line, confirmed the location of this pipe. This lion was reportedly suspected as being used to dispose the treated water from filter plant by Railroad. Additionally, a 6-inch diameter metal line, an abandoned main water line was exposed during this excavation. In order to test the quality of the soil beneath these lines, the clay pipe and metal pipe were excavated and removed from the site.

Confirmation soil samples Tr-3 through Tr-5 and P-3 through P-8, collected from the bottom of the excavation trenches confirmed that the concentrations of chemicals of Concern (COCs) were substantially below the approved clean-up criteria levels (Tables 1 & 2, Figure 2, and Appendix C).

The excavation was temporarily backfilled with clean native soil to the surface. The engineered compaction of excavated pit will be performed after the general grading of the site.

4.5 Soil Sampling

Soil samples from the bottom the excavations pits were obtained via utilizing a decontaminated hand held auger. The soil samples were collected using a clean and decontaminated sampler equipped with four 2½-inch diameter by 3-inch long brass tubes mounted within a 2½-inch inside diameter drive sampler. The sampler was attached to a down-hole slide hammer, lowered to the specific sampling depth, and then driven 12-inches into the formation. After sample recovery, the ends of the lowest brass tube was covered with Teflon sheet and plastic caps and taped with silicon tape over the ends. The samples were labeled with sample identification, date and time of sampling and the project number, and sealed in Ziploc™ plastic bags. The samples were immediately placed into an ice chest chilled using frozen blue and/or crushed ice. The collected samples were delivered to American Scientific Laboratory (ASL), a laboratory certified in the State of California for hazardous waste testing, and in accordance with the EPA chain-of-custody procedure. Soil sampling from the excavation walls were performed by

AB

digging approximately one foot into the wall, followed by pushing a new and clean glass jar directly into the undisturbed soil. Following sample retrieval, the glass jars were sealed with a plastic lid, labeled with the sample identifications, date and time of sampling and project number, and immediately placed into a Ziploc bag and into a chilled ice chest using frozen blue and crushed ice.

Prior to use, all sampling tools and instruments were washed in a non-phosphate cleanser solution, rinsed with tap water and then distilled water.

Verification and profiling samples from the stockpiled soil were obtained via utilizing a decontaminated hand held auger following the aforementioned procedures.

4.6 Disposal of Contaminated Soil

TPH impacted soil was stockpiled in stockpiles # 1 trough #3. Profiling samples were collected from each stockpile on the site by AB registered geologist as composite samples, as well as daily profile sampling, which were performed by disposal facility. Analytical test results of profiling samples were submitted to Santa Maria Regional Landfill for approval (Appendix B).

During September 25 and 26, 2006, a total of 389.54 tons of TPH and metal impacted soil were transported by PC INC. (via Kritz Trucking) to Santa Maria Regional Landfill located at 2065 E. Main Street, Santa Maria, CA 93454 under proper manifestation documents (Appendix A). The profiling sampling, manifest documentation and soil disposal were performed under supervision of AB's Registered Geologist and SLOFD representative.

4.7 Disposal of Concrete

The demolished concrete was stockpiled in a separate stockpile. Confirmation sample "Concrete" was collected by accumulation chips from various portions of the concrete from the stockpile (composite sample) by AB registered geologist. Analytical test results of confirmation samples were submitted to Roxand recycling facility for approval (Appendix B).

During September 27 and 28, 2006, a total of 600 tons of concrete were transported by PC INC. (via Kritz Trucking) to Roxand recycling facility located at 2280 Hotton Road, Nipomo, CA 93454 under proper trucking documents (Appendix B).

Converse Project No. 01-42-840-01/02-42-848-01

Dear Ms. Loughmiller:

Converse Consultants (Converse) is pleased to present this report for continuation of the Phase II Environmental Site Assessment investigations at the subject site. This report was prepared in accordance with our proposal dated December 11, 2001 and Service Agreement dated January 23, 2002.

This report was prepared by Mr. William Ragsdale and Mr. John Ziegler under the professional supervision of Mr. Dennis E. Jensen. Mr. Norman Eke, Converse's Manager of Environmental Services for California, provided technical review and Administrative support for the project.

Please do not hesitate to call William Ragsdale at (714) 444-9660. We appreciate this opportunity to be of service to Halferty Development Company, LLC.

1.0 INTRODUCTION

1.1 Purpose

Converse Consultants (Converse) has prepared this report to document additional site environmental investigations for the proposed Albertson's facility. These investigations were conducted as a continuation of Environmental Site Assessment studies that Converse conducted in 1995 and 1996 and from recommendations in our report dated February 29, 1996 (Site Characterization Summary Report). A site walk identified additional Recognized Environmental Concerns (REC) and was added to the scope of work. See Figure 1 Site Vicinity Map for site location.

1.2 Objective

This investigation was conducted to further evaluate the lateral and vertical extent of previously identified hydrocarbon-impacted soils at the property, and to investigate areas that were not accessible during our previous site studies in 1995. During this investigation, we identified additional information about possible hazardous materials on site, including the reported disposal of battery acid on site and wood framing potentially treated with arsenic. The areas of additional potential hazards were evaluated as part of this investigation.

1.3 Scope Of Services

To accomplish our objective the following scope of work was performed.

- Review of previous work on the site.
- Conduct site walk with client to identify areas of concern.
- Review of surface conditions and selected tenant spaces
- Subsurface investigation, including soil and groundwater sampling
- Laboratory analysis of selected soil and groundwater samples
- Evaluation of compiled soil and groundwater data
- Preparation of this report.

The proposed Converse services were based on the conclusions and recommendations presented in our Site Characterization Summary Report dated February 29, 1996 and site walk in January 2002.

2.0 BACKGROUND

The previous reports identified the following five areas.

Area 1	645 Emily Street which includes five existing buildings;
Area 2	2201 Emily Street which includes one existing building;
Area 3	A pie shaped property located south of the 2201 Emily Street property;
Area 4	Undeveloped land between the existing Mid-State Bank building and the City of San Luis Obispo Fire Department property; and
Area 5	The South Street right-of-way.

The prior investigation by Seacor (1992) involved only the 645 and 2201 Emily Street properties. That investigation revealed the presence of elevated concentrations of Total Recoverable Petroleum Hydrocarbons (TRPH), toluene, ethylbenzene and total xylenes near the former oil-water separator and concrete basin/filter plant, on the 2201 Emily Street property, and total lead near a former paint shed at 645 Emily Street. Seacor concluded that additional subsurface assessment would be needed to investigate the vertical and lateral extent of the impacted soils.

Subsequent to the Seacor report, Converse (1995) performed a Phase I Environmental Site Assessment (ESA) on all five areas of the subject property dated September 19, 1995. The Phase I report concluded that a groundwater quality and soil contamination investigation should be conducted to evaluate if the site had been impacted by current and/or historical conditions.

Converse (1996) performed an initial Phase II Environmental Site Assessment to further evaluate the site. The results of that report are summarized below.

- **Area 1 645 Emily Street**

  <u>Former underground tank location:</u>

  There does not appear to be a significant impact to the soil or groundwater from the former tanks. Total Petroleum Hydrocarbons as diesel (TPHd) were detected in only one soil sample at a concentration of 300 ppm. Groundwater analytical data did not reveal high concentrations of petroleum compounds. At one location, soil vapors were detected above 1,000 ppm and strong petroleum odors were noted during drilling.

Former paint storage/spray shed and nearby area:

Elevated concentrations of TPH and soluble lead were detected in soil samples collected within and near an existing paint storage building

Common property line with SPRR:

Elevated concentrations of TPH (as diesel) were detected near a former oil-water separator.

- **Area 2 2201 Emily Street Property**

Concrete Basin/Filter Plant:

Elevated concentrations of Total Petroleum Hydrocarbons (TPH, as crude oil), and soluble lead were detected from soil samples collected within the concrete basin/filter plant.

Common property line with SPRR:

Elevated concentrations of TPH (as diesel and crude oil) were detected from soil samples collected near the eastern property line of 2201 Emily Street.

- **Area 4 City of San Luis Obispo Fire Department Property**

Low concentrations of TPH and ethylbenzene were detected in a soil sample collected during drilling for monitoring well MW-3.

- **Area 4 Undeveloped land between the existing Mid-State Bank building and the Fire Department property**

A relatively low concentration of TPH was detected in one sample.

- Ground Water Quality Investigation

Based on the data collected from the three-groundwater monitoring wells shown on Figure 1, the ground water flow direction appears to be towards the southwest at an approximate gradient of 0.05 foot/foot. The depth to ground water on February 7, 1996 was less than 1 foot below ground surface (bgs) in monitoring well MW-2 and between 4 and 7 feet in monitoring wells MW-1 and MW-3. The analytical results from a ground water sample collected from each well revealed the following:

- Monitoring well MW-1: no detectable volatile organics, no detectable TPH, and slightly elevated concentrations of nickel and chromium.

- Monitoring well MW-2: no detectable volatile organics, low concentrations of TPH, and elevated concentrations of chromium and TPH.

- Monitoring well MW-3: volatile organics and TPH were detected, and slightly elevated concentrations of chromium were detected.

The Site Characterization Summary Report concluded that the subsurface soils at the property have been impacted by petroleum hydrocarbons and metals in isolated areas, and that 1,2, -dichloroethehtane, chromium and nickel were present in the groundwater at levels above the State of California Maximum Contaminant Levels (MCL).

The Site Characterization Summary Report presented the following recommendations:

- Further investigation be performed.

- The hydraulic hoists, surface drains and the paint storage building at 645 Emily St should be removed.

- At 2201 Emily Street all subsurface piping and the concrete structure associated with the Southern Pacific Railroad concrete basin/filter plant, and all of the TPH and lead impacted soil should be removed.

- Additional sampling of the groundwater wells be performed.

- Areas with concentrations of previously detected compounds in excess of regulatory limits should either be:

  1) Removed, or
  2) Treated in-place, or
  3) A risk assessment should be performed to quantify the potential impact, the soil, water, and/or vapors, may have on the environment and/or human health.

3.0 Site Reconnaissance

For purposes of this investigation (2002), the property is divided into the following four areas identified as follows (See Figure 2 Site Map for all boring locations):

- **2201 Emily Street and wetlands** **Figure 3**
- **645 Emily Street645 Emily Street645 Emily Street** **Figure 4**
- **Fire Department Property** **Figure 5**
- **San Luis Garbage Property** **Not shown on maps**

On January 21, 2002 a site walk was conducted to evaluate surface site conditions as part of the current investigation. Each tenant space was inspected and site access arrangements for the drilling and sampling activities were made.

It was noted that the structures at 645 Emily Street were constructed of an open wood frame interior with corrugated tin sheets nailed to the outside. The wood framing appeared dark in color with no evidence of rotting or pest infestation. Halferty Development (Halferty) was informed that this wood might be treated with arsenic. Halferty requested that a sample be collected during the investigation and analyzed for the presence of arsenic.

A tenant on site was interviewed and reported that "plastic drums of battery acid are buried" at the southeast corner of the property at 645 Emily Street. Converse recommended exploratory trenching be conducted prior to any drilling in the area.

Converse was also told that a portion of the building located near the center of the 645 Emily Street property, Building C, was once used to store and mix pesticides. Converse recommended and completed a boring in that space, soil samples from the borings were additionally analyzed for pesticides.

Prior to leaving the site, boring and trench locations were marked with white paint and Underground Service Alert (USA) was notified of Converse's intention to conduct soil sampling and trenching. USA alerts owners of utilities in the area to identify utility locations so as to avoid conflicts with the subsurface investigation.

Additional reconnaissance was conducted on February 1, 2002 at the San Luis Garbage Property (previously identified as Area 3, south of 2201 Emily Street). The purpose of the site walk was to note any Recognized Environmental Concerns (REC).

4.0 Subsurface Investigation

4.1 Drilling and Sampling

On January 28, 2002 through February 1, 2002 Converse conducted soil-sampling activities utilizing Geoprobe direct push technology at the following locations:

- 16 locations at 645 Emily Street (GP25, GP26, GP27, GP28, GP29, GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP38, GP39, and GP40),
- 12 locations at 2201 Emily Street (GP41. GP42, GP43, GP44, GP45, GP46, GP47, GP48, GP49, GP50, GP51, GP52 and GP53),
- 3 locations on the San Luis Fire Department property (GP54, GP55 and GP56).
- 3 boring were proposed for a depressed area in the vacant lot near B6, but due to recent rains the area was inaccessible due to extremely muddy conditions.

See Figures 2, 3, 4, and 5 for boring locations.

Converse submitted ninety-nine (99) soil samples for chemical analysis. The samples were sealed, labeled and stored in a cooler at approximately 4° c prior to transportation to the analytical laboratory. The samples were delivered to Associated Laboratories, located in Orange, California (State Certified Laboratory) for chemical analysis under chain of custody protocol. See Appendix A - Tables for a summary of analytical results. Laboratory reports and chain of custody documentation are presented in Appendix B - Laboratory Reports and Chain of Custody Documentation.

4.2 Exploratory Trenching

On January 29, 2002 exploratory trenching was conducted at the southeast corner of the property at 645 Emily Street to investigate the reported disposal of drums of battery acid in that area. Three trenches were excavated as follows:

- One parallel with east edge of the property for a distance of approximately 30 feet,
- One at a 45 degree angle to the first trench for a distance of approximately 25 feet and
- One parallel to, and 20 feet west of the east edge of the property, 15 feet in length.

All trenches were excavated to a maximum depth of 8 feet below ground surface (bgs). See Figure 4 for location of trenches. No indication of buried drums was discovered.

Random field samples were collected and analyzed for pH. The pH readings were not indicative of battery acid. Soil samples were also submitted to the analytical laboratory for confirmation of the field pH analysis.

4.3 Groundwater Sampling

On February 1, 2002, Converse sampled the three groundwater monitoring wells MW1, MW2 and MW3. Our technician first measured the depths to ground water in each well. The monitoring wells were then purged using a stainless steel bailer. The wells were purged until a minimum of at least 3 casing volumes were removed and water quality parameters (pH, temperature, and conductivity) stabilized to within 10 percent between readings.

Groundwater samples were collected using separate, dedicated Teflon bailers at each well. The samples were placed in 40-mil VOAs, sealed, labeled and stored in a cooler with ice under chain of custody procedures. The samples were delivered to Associated Laboratories, located in Orange, California for chemical analysis by EPA method 8260 for VOCs, EPA method 6010 for Chromium and EPA method 8015M for Gasoline.

The purged groundwater was stored on site in labeled, DOT-approved 55-gallon drums pending transportation to a State of California licensed for treatment, storage or disposal facility.

5.0 SUMMARY OF FINDINGS

5.1 Geology

Subsurface soils encountered during this investigation generally consisted of sand, fine to medium coarse with traces of silt from below the concrete or asphalt to a depth of approximately 2 feet bgs. Below 2 feet, clay, reddish brown to brown was encountered to approximately 9 feet bgs. Between 9 and 12 feet bgs a weathered bedrock (claystone), brown, dry was encountered. Due to the hard clay stone most Geo-probe borings were terminated at 10 to 11 feet bgs due to refusal. For a complete set of boring logs see Appendix C.

5.2 Analytical Results

Exploratory trenching, site walk, soil, groundwater, and arsenic analytical results from the events conducted on January 28, 2002 thru February 1, 2002 at the site revealed the following:

5.2.1 645 Emily Street - Figure 4

Building C. Three probes were advanced in the interior of the Building C located at the center of the property. These probes are identified as GP25, GP26 and GP31.

GP25 and GP26 were advanced adjacent to the to the existing hydraulic hoist. At GP25, soil samples were collected at 2, 5 and 10 feet bgs. The boring was terminated at 10 feet due to refusal. At GP26, soil samples were collected at 2 and 5 feet bgs. The boring was terminated at 5 feet due to refusal.

Samples were analyzed for Total Petroleum Hydrocarbons (Carbon Chain) (TPHcc) in accordance with EPA method 8015 and Volatile Organic Compounds (VOCs) in accordance with EPA method 8260.

Two VOCs were reported at trace concentrations in both borings.

Boring	Depth In feet	Tetrachloroethene (PCE) ppb	Trichloroethene (TCE) ppb
GP25	2	11	14
GP26	2	3.5 j	ND
GP26	5	ND	2.4 j

"j" denotes reported below detection limits.

No other VOC analytes were reported.

TPH in the diesel range (C10 to C22) was reported at a concentration of 34 milligrams per kilogram (mg/kg, ppm) at 5 feet bgs in GP25.

TPH was not reported in the GP26.

GP31 was advanced in the reported pesticide storage and mixing area of Building C. Soil samples were collected and analyzed at 2, 5 and 10 feet bgs. All samples were reported as ND for EPA Method 8015M-carbon chain, 8260 for VOC's, and 8081 for pesticides.

Buildings A and B. Two probes were advanced in each of the buildings (Buildings A and B) that parallel Emily Street. Probes were advanced at the far south end of each building. These probes were identified as GP29 and GP30. Soil samples were collected at 2, 5, and 10 feet bgs and each location. The borings were terminated at ten feet due to refusal. See Figure 3 for probe locations. All the samples were analyzed by 8015M-carbon chain and 8260 for VOCs.

Building A:

TPH was reported at two depths in GP29 as follows:

Probe No.	Depth in feet	Gasoline mg/Kg	Diesel mg/Kg	Waste Oil mg/Kg
GP29	2	1050	1160	ND
GP 29	5	618	400	ND

VOCs were also reported in the 2, 5 and 10 feet bgs samples from GP29. VOC's detected and their maximum concentrations are:

Analyte	Maximum Concentration (ppb)
Benzene	20800
Toluene	28800
Ethylbenzene	30100
Xylenes	130000
n-butylbenzene	3110
Isopropylbenzene	3440
Naphthalene	16800
n-propylbenzene	9520
1,2,4, trimethylbenzene	66100
1,3,5 trimethylbenzene	20500

See Appendix B for complete analytical report.

Samples collected from GP30 were reported as ND for TPH and VOCs.

UST Area. Three probes GP32, GP33 and GP34 were advanced in the immediate area of MW2 and BE18. This is the same area that an underground storage tank (UST) was reported in the prior Phase I and Phase II investigations.

At GP32 and GP34, soil samples were collected at 2, 5, and 10 feet bgs. All soil samples were reported as ND for 8015M for carbon chain and 8260 for VOCs. Due to the suspected presence of gasoline, soil samples were also analyzed for lead in accordance with EPA method 6010. All samples were reported at concentrations below 10 times the Soluble Threshold Limit Concentration (STLC).

At GP33, soil samples were collected at 2, 5, 10 and 15 feet bgs. The 2, 5 and 10-foot bgs samples were analyzed for VOCs, Carbon Chain and lead. The 15-foot sample was archived.

TPH was detected at two depths in GP33 as follows:

Probe No.	Depth in feet	Gasoline mg/Kg	Diesel mg/Kg	Waste Oil mg/Kg
GP33	2	240	58	ND
GP33	5	124	35	ND

VOC's were also reported in the 2, 5 and 10 feet bgs samples.

Analyte	Maximum Concentration (ppb)
Benzene	6440
Toluene	8630
Ethylbenzene	7420
Xylenes	37300
n-butylbenzene	2680
Isopropylbenzene	3440
Naphthalene	4970
n-propylbenzene	2840
1,2,4, trimethylbenzene	22400
1,3,5 trimethylbenzene	7560

See Appendix B for complete analytical report.

All samples analyzed for lead were reported at concentrations less than 10 times the STLC.

East Property Line. Three probes GP35, GP36 and GP37 were advanced at the southeast corner of the property. The location of these probes was selected to help identify any migration of petroleum hydrocarbons previously reported along the property line. Soil samples were collected from 2, 5 and 10 feet bgs. Samples were analyzed for TPH carbon chain and VOCs. Laboratory pH analysis was also completed on these samples for confirmation of the field pH readings taken during the trenching performed in this area.

Slightly elevated levels of pH were reported as 7.9 at GP35 at 2 feet bgs to 9.5 at GP36 at 5 feet bgs. These levels are indicative of base, not acid, conditions at that location.

TPH was reported only for the following samples:

Probe No.	Depth In feet	Gasoline mg/Kg	Diesel mg/Kg	Waste Oil mg/Kg
GP36	5	ND	58.0	ND

GP37	2	ND	1457	3840

VOCS were reported only for the following samples:

Probe No.	Depth In feet	Toluene ppb	Total Xylenes ppb
GP35	2	ND	11.2
GP37	2	2540	ND

See Appendix B for complete analytical report.

Buildings D and E. Two probes GP27 and GP28 were advanced inside Building E at the south edge of the property. This building had been previously identified as being used as a paint booth and for paint storage. Soil Samples collected from inside the spray booth and storage area were analyzed for Title 22 metals (EPA methods 6010 and 7420).

Three probes GP38, GP39 and GP40 were advanced north of Building D and E existing building due to the presence of a clarifier between these buildings. Soil samples collected from this area were analyzed for Title 22 metals, TPH and VOCs.

Soil samples were collected from 2, 5, and 10 feet bgs at each location.

At GP27 and GP28 three metals (Chromium, Lead and Nickel) were reported above 10 times the STLC.

- Total chromium was reported in all six samples collected from GP27 and GP28. Reported concentrations ranged from 284 ppm at GP28 at 10 feet bgs to 52.5 ppm at GP28 at 2 feet bgs.

- Lead was reported in excess of ten times the STLC in only one (1) sample at a concentration of 164 ppm (GP28 at 2 feet bgs).

- Nickel was reported in four (4) samples at concentrations ranging from 817ppm at GP28 at 10 feet bgs to 222 ppm at GP28 at 5 feet bgs. All other metals were reported below ten times the STLC.

At GP38, GP39 and GP40 three metals (Chromium, Lead and Nickel) were reported above 10 times the STLC in 8 of the 9 soil samples analyzed.

- Total chromium was reported in 8 of the 9 samples in excess of ten times the STLC. Concentrations reported ranging from 175 ppm at GP39 at 10 feet bgs to

58.3 ppm at GP40 at 5 feet bgs.

- Lead was reported in 3 of 9 samples in excess of ten times the STLC. Concentrations ranged from 498 ppm at GP40 at 2 feet bgs to 136 ppm at GP39 at 2 feet bgs.

- Nickel was reported in 2 of 9 samples in excess of ten times the STLC. Concentrations ranged from 425 ppm at GP38 at 10 feet bgs to 267 ppm at GP39 at 10feet bgs.

Gasoline range hydrocarbons were detected at GP39 at 2 feet bgs at a concentration of 220 ppm. All other samples analyzed for the carbon chain were reported as ND at GP38, GP39 and GP40.

All 9 samples analyzed for VOCs were reported as ND.

A sample of wood was collected from the wood frame of interior of Building B. The sample was analyzed in accordance with the Toxicity Characteristic Leaching Procedure (TCLP) for the presence of arsenic. The sample was identified as AR1. A concentration of 0.021 ppm was reported.

5.2.2 2201 Emily Street – Figure 3

A trucking company currently occupies this property. Probes were located along the northern edge adjacent to the paint booths at 645 Emily Street, at the toe of the slope on the east edge of the property, and on each side of a concrete basin, as shown in Figure 4.

South Street Right of Way. Three probes GP41, GP42 and GP43 were advanced adjacent to the northern edge of the property adjacent to the paint booths at 645 Emily Street. This area was formerly identified as the South Street right of way. Soil samples were collected from 2, 5 and 10 feet bgs at GP 41 and 43 and from 2, 5, 10, 15, and 20 feet bgs at probe GP42. Samples from the 2, 5, and 10-foot bgs depths at each location were analyzed; samples from the 15 and 20-foot depths at GP42 were archived.

All nine (9) soil samples submitted were analyzed for TPH and VOC's. Soil Samples collected from GP41 and GP42 were also analyzed for Title 22 metals.

Three metals were reported above 10 times the STLC in 8 of the 9 soil samples analyzed.

- Total chromium was reported in excess of ten times the STLC in 6 of the 9 samples analyzed. Reported concentrations ranged from 173 ppm at GP41 at 10 feet bgs to 50.9 ppm at GP41 at 5 feet bgs.

- Lead was reported in excess of ten times the STLC in one (1) sample. Reported concentration was 78.2 ppm at GP41 at 2 feet bgs.

- Nickel was reported in excess of ten times the STLC in 2 of 9 samples analyzed. Concentration reported ranged from 418 ppm at GP42 at 2 feet bgs to 253 ppm at GP41 at 10 feet bgs.

All soil samples analyzed for TPH and VOCs were reported as ND.

East Property Line. Six probes (GP44, GP45, GP46, GP47, GP48, and GP49) were advanced at the toe of the slope along the east edge of the property. Four probes were advanced in the area around the concrete basin (GP50, GP51, GP52 and GP53). These probes were advanced to further evaluate if contamination had migrated from the adjacent railroad or from the concrete basin.

A total of 31 soil samples were collected. Twenty-eight of the soil samples collected were analyzed for TPH in accordance with EPA method 8015M and for VOCs in accordance with EPA method 8260. Three soil samples collected below 10 feet bgs were archived for the purpose of later analysis if needed.

Trace concentrations of VOC's were reported in 7 of the 28 samples analyzed.

- Naphthalene was reported in 5 of the 28 samples analyzed at concentrations ranging from 10 to 22 ppb.

- N-butylbenzene was reported in one sample (GP46 at 2 feet bgs) at a concentration of 7.4 ppb.

- 1,3,5 trimethylbenzene was reported in GP46 at 2 feet bgs and GP 52 at 5 feet bgs at concentrations of 6 ppb and 5.4 ppb respectively.

TPH in the diesel and waste oil ranges were reported in GP52 at 2 feet bgs at concentrations of 51 ppm (diesel) and 615 ppm (waste oil) respectively.

All other samples were reported as ND for TPH and VOC's.

5.2.3 Fire Department and Vacant lot – Figure 5

The greater portion of this area is vacant. A portion of the area is located on San Luis Obispo Fire Department land. Three borings GP54, GP55 and GP56 were advanced on the fire department land. A total of 11 soil samples were collected. Nine of the soil samples from the 2, 5 and 10 feet bgs depths were analyzed for TPH, VOCs, lead and chromium. Samples collected below 10 feet bgs were archived.

TPH in the gasoline, diesel and waste oil ranges was reported in three of the soil samples analyzed.

Probe No.	Depth In feet	Gasoline Mg/kg	Diesel Mg/kg	Waste Oil Mg/kg
GP54	2	ND	1660	13800
GP55	2	33	ND	362
GP56	5	ND	ND	132

The following VOCs were reported in the soil sample collected from GP 55 at 8 feet bgs.

Analyte	Concentration ppb
Ethylbenzene	5,690
Naphthalene	2,810
1,2,4, trimethylbenzene	13,500
1,3,5 trimethylbenzene	3,410
Total Xylenes	6,470

See Appendix B for complete analytical report.

Chromium was reported in excess of ten times the STLC in 6 of 9 soil samples analyzed. Concentrations ranged from 157 ppm at GP54 at 2 feet bgs to 50.6 ppm at GP56 at 10 feet bgs.

Lead was also reported at concentrations in excess of ten times the STLC in 2 of the 9 soil samples analyzed. Concentrations ranged from 167 ppm at GP55 at 2 feet bgs to 84.9 ppm at GP54 at 2 feet bgs.

5.2.4 Groundwater Investigation

Groundwater samples were collected from existing groundwater monitoring wells located on each of the above-mentioned properties. Wells are identified as MW1, MW2 and MW3. See Figure 2 for well locations.

Each groundwater sample was analyzed in accordance with the following EPA methods:

- 8015M for TPHg,
- 8260 for VOCs
- 6010 for Total Chromium.

All groundwater samples were reported as ND for TPHg and VOCs

Total Chromium was reported in all 3 samples ranging from 0.094 ppm at MW3 to 0.012 ppm MW1.

5.2.5 Wetland Area Stormwater Sampling

Converse was requested to sample the water that traversed the wetlands area for possible contamination. Converse implemented a sample analysis program to evaluate if the water would meet limited storm water criteria since the water does enter the city stormwater system.

Samples were collected from two locations identified as the upper and lower. Upper is the area of the wetlands were water enters via a pipe the traverse the railroad to the south. Lower is an area were the water collects prior to entering a storm drain to the north.

Samples were analyzed for pH (EPA Method 150.1), Total Suspended Solids (EPA Method 160.2), Methylene Blue Active Substance (EPA Method 425.1), Oil and Grease (EPA Method 5520B), Fish Bioassay (EPA Method 600/4-85/013), Purgeable Halocarbons by GC (EPA Method 601), Purgeable Aromatics (EPA Method 602) and Glycols-Alcohols by GC-FID (EPA Method D285).

The value for pH was reported at 7.37 and 7.83, well within acceptable levels to neutral 7.0. Both samples for Total Suspended Solids (TSS) were reported at 12 mg/l each. Methylene Blue Active Substance, Oil and Grease, Purgeable Halocarbons, Purgeable Aromatics and Glycols-Alcohols were reported as non detect (ND). The Fish Bioassay reported Toxicity Units as <0.588 with a 100% Survival.

6.0 DISCUSSION

Analytical results show that the site is impacted in several areas from metals, hydrocarbons and VOC's. The following paragraphs summarizes these results

Metals:

Chromium, Lead and Nickel were detected above EPA Region 9 Preliminary Remediation Goals (PRG) for residential soil (the most conservative PRGs). The PRGs are used as a preliminary screening tool to evaluate the potential impact to a site from a chemical.

- Lead. The maximum concentration of lead detected on the site was 498 ppm. The residential PRG for lead in residential soil is 400 ppm, the PRG for industrial soil is 750 ppm. Lead was detected in only one location in excess of the residential PRG (GP40 @ 2' bgs). Lead detected beneath this sample was 6.05 ppm. This suggests a limited occurrence of lead in excess of the PRG at GP40. Reported concentration appears to decrease with depth, which indicates that the impacted areas are mostly surficial.

- Nickel. Nickel was detected in 10 locations out of the 20 analyzed in excess of the California Modified residential PRG of 150 ppm. The industrial PRG for nickel is 41000 ppm. The maximum concentration detected was 1020 ppm at GP 42 at 5 feet bgs. The average concentration was 250 mg/kg. These elevated levels of nickel were typically detected at 5 and 10 feet bgs along the south side of 645 Emily Street. This suggests that elevated levels of nickel at depths of 5 to 10 feet bgs are present at the southern portion of 645 Emily Street, however the sampling for metals was limited to this area. Reported concentration appears to decrease with depth, which indicates that the impacted areas are mostly surficial.

- Total Chromium. Total Chromium was detected in excess of the PRG for total chromium of 210 ppm in two locations (GP28 at 10' at 284 ppm and GP 42 at 5' at 540 ppm). The average concentration was 115.5 ppm. The total chromium has not been identified as trivalent (chromium 3) or hexavalent chromium (Chromium 6). The PRG for chromium 3 is 100,000 ppm and for chromium 6 is 0.2 ppm. Reported concentration appears to increase with depth, which indicates that the chromium may be naturally attenuating.

TPH and VOC's:

Three areas of concern have been identified with respect to TPH.

- 645 Emily Street

  Elevated levels of gasoline and diesel range hydrocarbons were detected at the area of former UST (GP 29 and 33). Elevated levels of VOC's were also detected. The VOC's detected are typical constituents of gasoline. The highest concentrations were detected at the 2-foot depth. TPH was not detected at the 10-foot depth. VOC's were detected at trace concentrations at 10-feet.

  Elevated levels of toluene and TPH in the gasoline and oil range were detected in boring GP37.

  The occurrence of TPH and VOC's at 645 Emily Street appears to be limited to this area and to the upper 5 to 10 feet of soil.

- 2201 Emily Street

  Previous investigations at the area of the concrete basin detected elevated levels of TPH in the diesel and oil ranges. Step out borings advanced during this investigation did not detect TPH in this area with once exception (GP52 at 2' bgs). Levels of TPH detected at GP52 are considered low for the type of hydrocarbon detected.

  The area of impacted soil appears to be limited to the footprint of the concrete basin. The vertical extent of the impacted soil is not known.

- Fire Department Property

  Elevated levels of TPH in the gasoline and diesel ranges were detected at boring GP 54 near the southern fence line of the property.

7.0 CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

Based upon the results of the previous Converse reports, Phase I Environmental Site Assessment, Site Characterization Summary Report (initial Phase II work), and sampling and analysis programs conducted for this report, it is apparent that the subsurface soils at the site have been impacted by hydrocarbons (ranging from gasoline to waste oils), heavy metals (Chromium, Lead and Nickel). In addition, prior surveys have identified lead based paint, and Asbestos in the structures.

The investigations have also indicated that the groundwater has been impacted by Total Chromium.

The following is a list of impacted areas with estimated volumes:

645 Emily Street

- In the immediate area of GP29 and GP33 gasoline has been detected at levels that may require remedial action. The estimated volume of impacted soil is approximately 300 cubic yards.

- In the area of GP25 and GP26 a hydraulic hoist will need to be removed. Removal should be monitored and if any further contamination is observed, it should be removed. The volume of impacted soil is unknown.

- In the area of BE16, BE15, GP37and GP43, hydrocarbon-impacted soil has been detected. This soil may be able to be remediated on site or left in place with regulatory oversight. The estimated volume of impacted soil is approximately 400 cubic yards.

- In the area of GP27 and GP28 extending to the north to GP38 and to the west to GP40 and to the east to GP42, elevated levels of Chromium, Lead and Nickel have been reported. Additional analysis of these soils is needed to determine the concentrations of these metals with respect to the Soluble Threshold Limit Concentration. Tests for hexavalent chromium should be performed to determine if the levels are considered hazardous. This soil may be able to be remediated on site or left in place with regulatory oversight. Estimated volume of impacted soil is approximately 100 cubic yards.

- The interior wood structure of three of the buildings on site has been identified as containing arsenic. The levels detected are below hazardous waste guidelines. The wood appears to be low risk as is, but may require special handling if building is moved or demolished.

- Prior surveys have identified buildings on site as containing suspected lead and asbestos. These buildings will have to be remediated if they are moved or demolished.

2201 Emily Street

- In the area of the concrete basin, soil within the perimeter has been impacted with hydrocarbons. This soil will need to be remediated either on site or by removal. The estimated volume of impacted soil is approximately 600 cubic yards.

- The area of BE13 and BE14 has been impacted with hydrocarbons. This soil will need to be remediated either on site or by removal. The estimated volume of impacted soil is approximately 1700 cubic yards. This area appears to have been impacted by offsite operations to the east and potentially reoccur if the off site source is not identified and remediated.

  We reviewed the proposed plans for the property and noted that a retaining wall is proposed to be constructed at this location. Based upon our investigations, it should be noted that any drainage from behind the wall might be contaminated. Drainage should be designed so that any water generated is retained on the adjacent property and disposed of in an appropriate manner.

- Prior surveys have identified the building on site as containing suspected lead and asbestos. These buildings will have to be remediated if they are moved or demolished.

Fire Department and Vacant Lot

- The area around GP55 has been reported as being impacted with hydrocarbons. This soil will need to be remediated either on site or by removal. The estimated volume of impacted soil is approximately 300 cubic yards.

- In the area of GP55, GP56 and GP57 elevated levels of Chromium and Lead have been reported. This soil may be able to be remediated on site or left in place with regulatory oversight. Estimated volume of impacted soil is approximately 200 cubic yards.

Wetlands Area

- The water sampled from the upper and lower portions of the wetlands does not appear to be impacted for parameters tested.

San Luis Garbage Property

- There does not appear to be any impact to the site from current operations. The surface staining observed appears to have occurred from trucks being parked onsite and maintenance being performed on site.

7.2 Recommendations

- A human health risk evaluation should be performed to evaluate and quantify the potential risk posed by the chemicals detected on the site. The parameters for the risk assessment should established in consultation with the local regulatory agencies (Fire Department and Regional Water Quality Control Board).

- Converse should consult with the project design team regarding cleanup activities and the potential for impact to the site from the adjacent property. These issues should be thoroughly reviewed prior to the start of construction. Areas of concern may be able to be health risked away, other areas may require minimal remediation and other areas may be remediated during grading and construction efforts.

- Additional delineation of the extent of chemicals in the soil may be required to further quantify the extent and levels of chemicals present. This would include further analysis for metals and hexavalent chromium at 645 Emily Street.

- Additional delineation of the vertical extent of the impacted soil near BE13 and BE14 along the east property line at 2201 Emily Street should be performed to evaluate the depth of TPH impacted soil in this area.

- The stock pile noted in the previous Phase I report at 2201 Emily Street near the wetlands should be analyzed for TPH and metals

- Soils in the area of GP55, GP56 and GP57 at the Fire Department property should analyzed for the STLC for chromium, lead and nickel and for hexavalent chromium (chromium 6) to determine if the levels would be considered hazardous if the soil is removed from the site.

- Additional delineation of the extent of chemicals in the soil may be required to further quantify the extent and levels of chemicals present. This would include further analysis for metals and TPH in the vacant lot in the immediate area of the depression and stockpiles near B6.

- Soil conditions at the San Luis Garbage site south of 2201 Emily Street should be monitored during grading operations for the potential of impact from adjacent sites or historical uses.

8.0 LIMITATIONS

This report has been prepared for the sole benefit and exclusive use of Halferty Development and Albertson's in accordance with the general conditions under which these services were provided. Our services have been performed in accordance with generally accepted practices in the environmental sciences. No other warranty, either expressed or implied, is made.

Converse Consultants is not responsible or liable for any claims or damages associated with the accuracy or completeness of information provided by others. This report should not be regarded as a guarantee that no further contamination, beyond that which may have been identified in our assessment, is present on, beneath, or in the vicinity of the property. In the event that changes in the nature of the property occur or additional relevant information about the property is brought to our attention, the conclusions and recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the conclusions of this report are modified or verified in writing. Reliance on this report by Third Parties shall be at the Third Party's sole risk.

Re: 1998 Santa Barbara St., San Luis Obispo, CA – Closure letter for UST removal

Dear Mr. Rarig,

I have received the analytical report dated September 13, 2000, for the above-mentioned site. After reviewing this report, it has been determined that all significant soil contamination associated with the tank has been removed. Other required documentation such as tank and soil hazardous waste manifests have been received. Therefore, assuming that the information provided was accurate and representative of existing conditions, it is the position of this office that no additional sampling or clean up of this site is required.

It should be noted that this letter does not relieve the property owner of any responsibilities mandated under the California Health and Safety Code if existing, additional, or previously unidentified soil and or groundwater contamination is discovered.

Please contact me at (805) 781-7383 with any questions you may have regarding this matter.

Sincerely,

D. Kerry Boyle

HUMAN HEALTH RISK ASSESSMENT

UPRR Main Yard
San Luis Obispo, California

Prepared for:

Union Pacific Railroad Company

Prepared by:

Center for Toxicology and Environmental Health

May 2005

EXECUTIVE SUMMARY

This human health risk assessment (HRA) evaluates possible future human health risks that may be associated with chemicals detected in soil and soil vapor at the Union Pacific Railroad Main Yard Site (the Site) in San Luis Obispo, California. This report is submitted to the San Luis Obispo Fire Department (SLOFD) and is conducted in accordance with the work plan submitted to the SLOFD and the Agency for Toxic Substances and Disease Registry (ATSDR).

As evaluated in the HRA, the Site consists of three focus areas. Two portions of the Site are currently owned by Union Pacific Railroad Company (UPRR); these portions of the Site are the western portion of the yard (western yard) and the right of way (ROW). The western yard is currently not used for any purpose. The ROW contains active UPRR trackage. A third area of the Site contains a paved bike path which borders the eastern edge of the ROW. The area containing the bike path once belonged to UPRR but was sold to the City of San Luis Obispo.

The Site is located along the foot of Terrace Hill in southern San Luis Obispo, California. The Southern Pacific Transportation Company (SPTCo, now UPRR) established railroad operations at the Site in 1894. In addition to transporting passengers and freight, SPTCo used the Main Yard to fuel and perform minor maintenance activities on locomotives. Fueling and maintenance operations at the Main Yard ceased in May 1987. The Main Yard is primarily unpaved, and has been filled and graded level. A layer of rock ballast is present at the surface along the track lines. Future use of the property remains uncertain. Conservatively, the future use of the property is assumed to be commercial/industrial and recreational in nature.

A total of twelve environmental investigations have been conducted at the Site since 1985. These investigations have primarily focused on total petroleum hydrocarbons (TPH) in shallow, unconsolidated soils from areas of the Site associated with former fueling operations. Activities have included soil and groundwater investigations, a tank removal, and localized soil remediation. Approximately 400 soil samples and 23 groundwater samples have been collected from the Site. The samples were submitted for various chemical analyses, including TPH, metals, polycyclic aromatic hydrocarbons (PAHs), and/ or gasoline constituents. In June 2004, ERM conducted additional soil, soil vapor, and ground water investigation to fill remaining data gaps for the purpose of assessing human health risks for the portion of the Site to the west of the ROW.

In keeping with the risk assessment work plan, chemicals in soil from 0 to 10 feet bgs were screened using San Francisco Regional Water Quality Control Board (RWQCB)

Environmental Screening Levels for soil that are protective of direct contact with residential soil and generation of vapors migrating into a residence.

Based on screening conducted using ESLs, the following chemicals were selected as chemicals of potential concern (COPCs) in soil: benzene, benzo(a)pyrene equivalents, TPH-diesel, TPH-motor oil, antimony, arsenic, barium, cadmium, copper, lead, nickel, and vanadium.

VOCs detected in soil vapor were well below residential soil vapor ESLs. For this reason, no COPCs were identified in soil vapor.

Due to differing current and possible future uses of the three portions of the Site, three different types of individuals were evaluated as being potentially exposed to chemicals in soil. On-site workers, on-site construction workers, and an on-site recreating child were considered to be potential receptors at the Site. A recreating child was assumed to be exposed to COPCs in bike path and ROW soils. Construction workers were assumed to be potentially exposed to COPCs in soil in the bike path, ROW, and the western yard. Long-term on-site workers were assumed to be exposed to COPCs in the western yard. This scenario is in keeping with future commercial/industrial development of the area to the western yard. Given further uncertainties as to the depth of soil that receptors may have direct contact with in the future, two different soil depth ranges for calculation of exposures to COPCs were evaluated; 0 to 0.5 feet bgs and 0 to 10 feet bgs. Digging or disturbing the soil greater than 0.5 feet bgs in the railroad right-of-way (ROW) is unlikely to occur. Therefore, samples greater than 0.5 feet bgs that clearly lie within the 50 feet ROW were not included in the risk calculations. Property within the ROW belongs to UPRR and is not subject to sale.

Soil exposures were calculated for each potentially applicable receptor in each area of the Site using data for the representative soil depth intervals. All receptors at the Main Yard were assumed to be exposed to COPCs by ingestion, skin contact, and inhalation of dusts. Average daily intakes and lifetime average daily intakes were calculated to assess possible noncancer and carcinogenic risks, respectively. Conservative exposure assumptions representing "reasonable maximum exposures" were used to calculate COPC intakes.

Conservative USEPA reference doses and DTSC and USEPA slope factors were used to assess potential noncarcinogenic and carcinogenic effects associated with potential exposures to COPCs in soil.

As determined by calculating the hazard index for the summed COPCs, noncancer risks for the on-site worker, construction worker, and recreating child exposed to 0 to 0.5 feet bgs Site soils were acceptably low.

Noncancer risks for on-site worker, construction worker, and recreating child exposed to 0 to 10 feet bgs soils were also acceptably low.

A very important uncertainty (and overconservatism) in the assessment of petroleum hydrocarbon risks was the assumption that all TPH detected at the site was the most toxic TPH fraction. Although this unlikely to be the case, there are no petroleum-fraction specific data available to better evaluate these risks. In the interest of conservatism, all TPH detected at the site was assumed to have the toxicological properties and potency of the C11-C22 aromatic hydrocarbon fraction.

Lead risks were evaluated using the State of California Leadspread 7 model. Calculated blood lead concentrations for the on-site worker, and construction worker were less than 10 μg/dL at the 99th percentile calculated blood lead concentration for 0 to 0.5 feet and 0 to 10 feet bgs soils, indicating that adults exposed to site soils would be unlikely to exceed the blood lead concentration targeted by USEPA and the State of California.

Theoretical lifetime cancer risks were also calculated for the on-site worker, construction worker, and recreating child. All lifetime cancer risks were within the USEPA acceptable cancer risk range of 1E-06 to 1E-04. The highest calculated theoretical lifetime cancer risks were calculated for the recreating child exposed to COPCs in bike path soils and on-site worker exposed to COPCs in soils in the western yard. Most of the calculated theoretical cancer risk was associated with exposure to arsenic in soil. Using current State of California risk assessment methods, residential exposure to background levels of arsenic in soil (about 6 mg/kg) is associated with a theoretical lifetime cancer risk of 9E-05, a level of risk approximately 9 times higher than the theoretical lifetime cancer risks calculated to be associated with the Main Yard Site.

1.0 INTRODUCTION

The Center for Toxicology and Environmental Health (CTEH) is pleased to submit this human health risk assessment (HRA) for the Union Pacific Railroad (UPRR) Main Yard Site in San Luis Obispo, California. A risk assessment is a study of the possible harmful effects of chemicals on humans.

The UPRR Main Yard Site is located on the southern side of San Luis Obispo, California (Figure 1).

The HRA is structured in accordance with the risk assessment work plan (RAWP) prepared for the San Luis Obispo Fire Department (SLOFD) (ERM, 2004a). The RAWP was reviewed by the Agency for Toxic Substances and Disease Registry (ATSDR).

This HRA uses guidance from the San Francisco Bay Regional Water Quality Control Board (RWQCB) (*Screening for Environmental Concerns at Sites with Contaminated Soil and Ground Water* (RWQCB, 2003)). The screening of the chemicals detected in soil and soil vapor was performed using RWQCB environmental screening levels (ESLs). The RWQCB develops ESLs for chemicals in soil, soil vapor, and other environmental media that are designed to conservatively protect human health and the environment. ESLs are intended to be used as a tool for identifying sites for further evaluation. As stated by the RWQCB:

> The ESLs are considered to be conservative. Under most circumstances, and within the limitations described, the presence of a chemical in soil, soil vapor or groundwater at concentrations below the corresponding ESL can be assumed to not pose a significant, long-term (chronic) threat to human health and the environment. Additional evaluation will generally be necessary at sites where a chemical is present at concentrations above the corresponding ESL. Active remediation may or may not be required, however, depending on site-specific conditions and considerations.

and

> The presence of a chemical at concentrations in excess of an ESL does not necessarily indicate that adverse impacts to human health or the environment are occurring; this simply indicates that a potential for adverse risk may exist and that additional evaluation is warranted. (RWQCB, 2003)

As needed, other United States Environmental Protection Agency (USEPA) and State of California risk assessment guidance are used to complete the HRA.

1.1 Risk Assessment Objectives and Scope

The main tasks of the human health risk assessment for the Main Yard include the following:

1) Collection, evaluation, and interpretation of the data from the Main Yard site investigations:

2) Screen chemical detected in soil and soil vapor using conservative health-based screening levels;

3) Assessment of on-site human exposure to chemicals present in site soils or during any future construction activities;

4) Assessment of the toxicity of the chemicals of potential concern (COPCs) (toxicity assessment);

5) Characterize health risks to on-site workers, construction workers, and on-site recreational users (risk characterization), and;

6) Evaluate uncertainties in the evaluation of health risk (uncertainties evaluation)

The objective of the HRA is to define the types and extent of public health hazards, if any, associated with potential exposure to chemicals detected in soil and soil vapor at the Main Yard Site.

1.2 Main Yard Description

This description of the UPPR Main Yard is taken from the risk assessment work plan prepared by ERM (ERM, 2004a). For the purpose of this risk assessment, the Main Yard Site was divided into three focus areas and includes the western portion of the yard (western yard), the right of way along the tracks (ROW), and the back path located just east of the ROW. UPRR owns the ROW and the western yard. The bike path is located on land owned by the City of San Luis Obispo. Figure 2 delineates the three focus areas.

The Site is located along the foot of Terrace Hill in southern San Luis Obispo, California. The Southern Pacific Transportation Company (SPTCo, now UPRR) established railroad operations at the Site in 1894 (reference: SLO Community Development Department, 6 June 1998). In addition to transporting passengers and freight, SPTCo used the Main Yard to fuel and perform minor maintenance activities on locomotives. Fueling and maintenance operations at the Main Yard ceased in May 1987. The Main Yard is primarily unpaved, and has been filled and graded level. A layer of rock ballast is present at the surface along the track lines. Former and existing facilities and structures at the Main Yard Site are shown on Figure 3.

Nickel	7	7	18	202	B
Vanadium	6	6	42.2	351	B

NA - not analyzed
ND - not detected

* Values of "TPH-crude oil" are expressed as "TPH-motor oil" in keeping with the use of motor oil at the property. High boiling fractions of TPH (such as C36 - C39 and C-40+ hydrocarbons) were added to the result of "TPH-crude oil" and expressed as TPH-motor oil.

Key to reason selected as COPC
A - maximum detected concentration exceeds 1 in 1,000,000 cancer risk-based residential direct contact ESL
B - maximum concentration exceeds is 0.1 or greater than the noncancer risk-based residential direct contact ESL

* Values of "TPH-crude oil" are expressed as "TPH-motor oil" in keeping with the use of motor oil at the property. High boiling fractions of TPH (such as C36 - C39 and C-40+ hydrocarbons) were added to the result of "TPH-crude oil" and expressed as TPH-motor oil.

Key to reason selected as COPC
A - maximum detected concentration exceeds 1 in 1,000,000 cancer risk-based residential direct contact ESL
B - maximum concentration exceeds is 0.1 or greater than the noncancer risk-based residential direct contact ESL

Table 2.1.1e
Chemicals of Potential Concern in Soil (0 - 10')
Western Yard

Chemical	Number of Detects	Number of Analysis	Minimum Detect	Maximum Detect	Reason for Selection as COPC
Benzene	2	28	0.39	0.4	A
Benzo(a)pyrene	2	23	0.047	0.24	A
TPH-Diesel	46	63	5	39330	B
TPH-Motor Oil *	21	24	24	30000	B
Antimony	2	5	1.2	6.6	B
Arsenic	5	5	2.5	6.9	A,B
Barium	5	5	54.2	269	B
Cadmium	15	28	0.11	1.7	A
Copper	5	5	46.5	3,160	B
Lead	33	33	2	1010	B
Nickel	28	28	19	930	B
Vanadium	5	5	59.6	142	B

Table 3.3
Soil Exposure Assumptions

Symbol	Definition	Exposure Assumptions		
		On- Site Worker	Construction Worker	Recreating Child
ABS	Skin absorption (unitless): chemical specific	For all receptors: Benzene = 0.10 Benzo(a)pyrene equivalents = 0.15 TPH (all types) = 0.10 Arsenic = 0.03 Cadmium = 0.001 Lead = Leadspread program 0.0055 for lifetime average daily intakes All other metals = 0.01		
AF	Adherence factor (mg/cm^2)	0.20	0.51	0.11
AT_{nc}	Average time – noncarcinogens (days)	ED*365	ED*365	ED*365
AT_c	Average time –carcinogens (days)	25,550	25,550	25,550
BW	Body weight (kg)	70	70	45
BA	Oral relative bioavailability of chemicals (unitless)	For all receptors: arsenic = 0.3 all other chemicals = 1		
CF	Conversion factor	0.000001 kg/mg		
CS	Concentration in soil- (mg/kg)-	chemical specific		
ED	Exposure duration – (years)	25	7	11
EF	Exposure frequency – (d/y)	250	20	275
IR	Inhalation rate – (m^3/day)	20	20	5
IRS	Soil ingestion – (mg/day)	50	330	25
PC	Particulate concentration in air (mg/m^3)	0.00076	0.7	0.00076
SA	Exposed surface area (cm^2/day)	3,300	5,800	3,950

Table 3.4
Exposure Equations

Exposure Pathway	Exposure Equation
Air	
Inhalation of particulates in air	$\text{Average daily intake} = \frac{CS \times PC \times IR \times EF \times ED}{BW \times AT}$
Inhalation of vapors in air	$\text{Average daily intake} = \frac{CS \times VF \times IR \times EF \times ED}{BW \times AT}$
Soil	
Ingestion of soil	$\text{Average daily intake} = \frac{CS \times IRS \times BA \times EF \times ED \times CF}{BW \times AT}$
Dermal absorption of chemicals in soil	$\text{Average daily intake} = \frac{CS \times SA \times AF \times ABS \times EF \times ED \times CF}{BW \times AT}$

Dear Mr. Bishop:

Arcadis U.S., Inc. (Arcadis) has prepared this report on behalf of Union Pacific Railroad (UPRR) to summarize response activities conducted following a tie fire incident along the railroad tracks that began on May 16, 2018. The incident occurred approximately 500 feet north of McMillian Avenue in San Luis Obispo, California (Site; **Figure 1**).

BACKGROUND

On May 16, 2018, five UPRR rail cars containing railroad ties were discovered on fire at the Site. Two local fire departments (San Luis Obispo [SLO] City and Airport) responded to the incident and extinguished the fire. According to the fire departments, approximately 300 gallons of 3 percent (%) AFFF C-303 Foam Concentrate (Foam) and 1,300,000 gallons of water was used to extinguish the flames. The fire departments provided the Foam Material Safety Data Sheet (SDS) which indicates the foam was manufactured by Chemguard and is not classified as a hazardous waste under the Resource Conservation and Recovery Act (RCRA), 40 Code of Federal Regulations 401.15. A copy of the Foam SDS is provided in **Attachment 1**.

The foam and water were released into the flaming rail cars until the fire was extinguished and the temperature of the burned material was sufficiently lowered. The foam and water, combined with pieces of burned railroad tie debris, spilled onto the ground, flowed eastward and westward from the tracks, and entered a seasonally dry drainage channel approximately 200 feet away. The foam and water and railroad tie debris were visible up to 250 feet downstream in the

channel where a natural soil dam prevented further migration of burned debris. Water and foam were visible up to approximately 600 feet down the channel. Additional water flow was observed in the channel at approximately 0.25 mile downstream (Location 2, **Figure 2**).

The UPRR Response Management Communication Center notified local and state agencies as part of release notification protocol. UPRR contacted Patriot Environmental Services (Patriot), Center for Toxicology and Environmental Health (CTEH), the SLO City and Airport fire departments, and Arcadis to assist with incident response activities. UPRR, Patriot, CTEH, Arcadis, the SLO Public Health Department of Environmental Health Services, the California Department of Fish and Wildlife (CDFW), and the Regional Water Quality Control Board (RWQCB) (the response team) representatives were on site to observe the spill and the collection of soil and water samples between May 16 and 18, 2018. Following the response activities, the RWQCB issued the incident a GeoTracker Global ID T10000012125.

OBJECTIVES

The objectives of the incident response activities were to:

- extinguish the fire
- identify areas where the foam/water mixture and burnt railroad tie debris impacted soil and ballast
- remove debris and impacted soil
- document the response activities
- collect water and soil samples within and outside the apparently affected areas
- compare the sampling results to screening criteria for reference

To accomplish these objectives, the response team dowsed the fire and foam and water. Burnt debris and impacted soil and ballast were removed. The response team documented and photographed the response activities, collected water and soil samples within the incident area and nearby channel, and collected a background soil sample (**Figure 2**). Details associated with these response activities, including soil and water analytical results and comparison to screening levels are provided below.

SCOPE OF WORK CONDUCTED

During May 16 through 18, 2018, Patriot removed burnt debris, soil, and ballast and collected spent water and foam. UPRR, CDFW, and the RWQCB agreed upon the sampling locations and the analyte list. Six water samples from fire suppression foam and water were collected by directly filling the laboratory-supplied sample bottles from rail car drainage. Seven soil samples were collected using a stainless-steel hand trowel and placed in laboratory-supplied sample containers. Soil and water sample locations are shown on **Figure 2**. A sample summary table is presented in **Table 1.** The sample locations are divided into three areas and are described as follows:

Channel Area (Locations 1, 2, and 3):

- Location 1 (L1) is located approximately 1 mile down channel from the incident. At L1, the water was ponded, had minimal flow, and no foam was observed. The following samples were collected:
  - One soil sample (SD-L1-2018-05-16)
  - One water sample (SW-L1-2018-05-16)
- Location 2 (L2) is located approximately 0.25 miles down channel from the incident. The water at L2 was noted to be ponded and not flowing. The following samples were collected:

  - One soil sample (SD-L2-2018-05-16)
  - One water sample (SW-L2-2018-05-16)
- Location 3 (L3) is located approximately 300 feet down channel from the incident. Foam was observed in the water at L3. The following samples were collected:
  - One soil sample (SD-L3-2018-05-16)
  - One water sample (SW-L3-2018-05-16)

Adjacent to the Incident Area (Locations 4, 6 and 7):

- Location 4 (L4) is located approximately 100 feet downstream from the incident. Ponded water with burnt debris and foam from the fire suppression activities were noted at this location. The following samples were collected:
  - Two soil samples were collected from L4. Sample (SD-L4-2018-05-16) was collected prior to soil removal at this location and confirmation soil sample (SD-L4-2018-05-18) was collected after visually impacted soils were removed.
  - Two water samples (SW-L4-2018-05-16 and SW-L4-2018-05-17)
- Location 6 (L6) is a post-remediation soil confirmation sample location (SD-L6-2018-05-17) was collected approximately 100 feet north of the incident.
- Location 7 (L7) is a rail car drainage water sample (TW-L7-2018-05-18) and was collected adjacent to the railroad tracks.

Background (Location 5):

- Location 5 (L5) is located approximately 200 feet north of the incident and is the background soil sample (SD-L5-2018-05-16) location.

Methods and Procedures

The water and soil samples were placed in laboratory-provided sample containers and submitted to TestAmerica Laboratories, Inc. (TestAmerica) in Irvine, California, a California-licensed laboratory.

Soil saturated with fire department response water, foam, and burnt railroad tie debris were removed from the incident area using hand tools and/or a vacuum truck and containerized in four on-site roll-off bins. In collaboration with the CDFW, visual observations were used for the removal of soil and burnt debris adjacent to the incident and along the railroad tracks (**Figure 2**). A 60-foot-long by 6-foot-wide section of apparently affected ballast was not removed due to concerns with track stability. The CDFW and RWQCB approved additional ballast material to be placed over this area to prevent a direct exposure pathway.

Burnt debris present in the railroad ballast was consolidated into waste piles on an unpaved roadway near the railroad tracks using a leaf blower. In addition, the unpaved roadway adjacent to the rail tracks was used as a staging area for the burnt railroad ties. The waste piles were manually removed by hand tools and/or with a front-end loader. The staging area was scraped with a front-end loader after the burnt railroad ties were removed. The CDFW and RWQCB visually inspected and approved all remedial areas on May 18, 2018. A photograph log of select response activities is presented in **Attachment 2**.

ANALYTICAL METHODS

TestAmerica analyzed discrete soil and water samples for the following analytes in accordance with the methods specified below:

- Semi-volatile organic compounds (SVOCs) in accordance with United States Environmental Protection Agency (USEPA) Method 8270 SIM
- Cresols in accordance with USEPA Method 8270
- 1,4-Dioxane in accordance with USEPA Method 8270C SIM with isotope dilution
- California Title 22 metals and mercury in accordance with USEPA Method 6010/7471
- Dioxins and furan in accordance with USEPA 8290A
- Per- and polyfluoroalkyl substances (PFASs) in accordance with USEPA 537.

In addition, one water sample (SW-L4-2018-05-17) was analyzed for a 96-hour CCR Title 22 fathead minnow hazardous waste screen bioassay. An analyte list for discrete water and soil samples and waste characterization (solid and liquid samples) is summarized on **Table 1**. Laboratory analytical reports are included in **Attachment 3**.

DATA VALIDATION

GHD Inc. (GHD) validated the laboratory results in its *Analytical Results and Reduced Validation of Reports J211807, J211814, J211818, J211832, J211847, and J213035,* dated September 24, 2018 (**Attachment 3**). Based on the GHD assessment, the discrete sample data associated with this project is acceptable except for 1,4-dioxane and methylphenol (creosol) analyses, which were analyzed outside the holding time in water samples collected from sample Locations 1 through 4 (or L1, L2, L3, and L4). The holding time was less than 48 hours. Associated sample results are qualified “J” to indicate a potential low bias.

TestAmerica provided the laboratory’s method detection limits (MDL) for each analyte. Positive analyte detections less than the reporting limit but, greater than the MDL were qualified with a “J” to indicate the value was estimated. Method blank results were non-detect indicating that laboratory contamination was not a factor except for a few dioxin and furan analytes at low concentrations. These water and soil analytical results are also noted with a “J” and include as shown in **Table 2** (soil) and **Table 3** (water).

SOIL ANALYTICAL RESULTS SCREENING

Soil sample analytical results were compared to the San Francisco Bay Regional Water Quality Control Board (SFRWQCB) Environmental Screening Level for commercial and industrial shallow soil (ESLs; SFRWQCB 2016). If a SFRWQCB ESL was not available, the USEPA Region 9 Industrial Soil Regional Screening Level (RSL; USEPA 2018) was used. For Perfluoroalkyl Acids, a USEPA RSL was calculated for perfluorobutane sulfonic acid (PFBS), perfluorodecanoic acid (PFDA), perfluorooctane sulfonic acid (PFOS), and perfluorooctanoic acid (PFOA).

A summary of the soil analytical results is presented in **Table 2**. Laboratory analytical reports and chain-of-custody documentation are included in **Attachment 3**. A summary of soil analytical results that exceeded their respective screening level is provided below.

- Arsenic was detected in the background soil sample (L5) above the method detection limit (and commercial/industrial ESL) at an estimated value of 2.8 mg/kg. Arsenic was also detected in the samples collected from locations L1, L2, L3, and L4 at concentrations ranging from 1.8 to 5.4 mg/kg. A confirmation soil sample collected at L4 was not detected above the laboratory method detection limit but, the laboratory method detection limit is above the SFRWQCB ESL.
- PFOS and PFOA were detected above their laboratory method detection limits and above their respective calculated USEPA RSL of 0.000379 mg/kg and 0.000172 mg/kg, respectively.
    - Background soil sample location L5 had a PFOS concentration of 0.0075 mg/kg which was also above the USEPA calculated RSL of 0.000379 mg/kg.
    - PFOS was detected in the samples collected from sample locations L1 through L4, and L6 at concentrations ranging from 0.0013 to 0.026 mg/kg.
    - Soil removal in the vicinity of location L4 resulted in confirmation soil sample results with a decline in PFOS concentrations to 0.022 mg/kg.
    - PFOA was detected in the samples collected from sample locations L1 through L4 at concentrations ranging from 0.00026 mg/kg and 0.0018 mg/kg (L4, prior to soil removal).
    - Soil removal in the vicinity of Location L4 resulted in confirmation soil sample results with a decline in PFOA concentrations from 0.0018 mg/kg to 0.00026 mg/kg.
    - PFOA was not detected above the method detection limit at the location L6.

WATER ANALYTICAL RESULTS SCREENING

Water analytical results were compared to SFRWQCB gross contamination level ESLs to evaluate the industrial land use impacts associated with incident response water drainage (SFRWQCB 2016). For perfluoroalkyl acids, a USEPA RSL was calculated for PFBS, PFOS, and PFOA. A summary of water analytical results is presented in **Table 3**. Laboratory analytical reports and chain-of-custody documentation are included in **Attachment 3**. A summary of water analytical results that exceeded their respective screening level is provided below.

- SVOCs (benzo[g,h,i]perylene and chrysene) were detected above their laboratory method detection limit and slightly above their respective SFRWQCB ESLs at water sample location L4.
- SVOC (anthracene) was detected above the laboratory method detection limit and slightly above the SFRWQCB ESLs at water sample location L7.
- PFBS, PFOS and PFOA were detected above their laboratory method detection limits and above their respective calculated USEPA RSL of 0.000379 mg/kg and 0.000172 mg/kg, respectively
    - PFBS was detected above the laboratory method detection limit and the USEPA calculated RSL (4.01 µg/L) at water samples collected from locations L3 and L4 at 5.2 µg/L and 4.5 µg/L, respectively.
    - PFOS and PFOA were detected above the laboratory method detection limits and above their respective calculated USEPA RSL of 0.04 µg/L.
    - PFOS was detected in the samples collected from locations L1, L2, L3, and L4 at concentrations ranging from 24 to 59 µg/L.
    - PFOA was detected in the samples collected from locations L1, L2, L3, and L4 at concentrations ranging from 0.91 to 1.8 µg/L.

WASTE MANAGEMENT

Foam, water, soil, and burnt debris impacted ballast were sampled and characterized as non-hazardous waste. Liquid waste was mixed with binned soil and ballast. Approximately 80 cubic yards of non-hazardous saturated soil and ballast and the remaining 30 barrels of liquid waste were transported under non-hazardous waste manifests to Waste Management's McKittrick Landfill in McKittrick, California. The waste profile analytical data is summarized on **Tables 2 and 3**. Laboratory reports are included in **Attachment 3**. The non-hazardous waste manifests and weight tickets are included in **Attachment 4**.

SUMMARY

The incident area is along the railroad tracks in the industrial railroad right-of-way and a seasonally dry drainage channel. The response team accomplished the response objectives by extinguishing the fire, identifying foam and water mixture and burnt railroad tie debris impacted soil and ballast and conducting removal actions. The response team documented the response activities, collected water and soil samples within and outside the areas apparently affected by the foam and water mixture, and the resulting analytical results were compared to screening criteria for reference purposes.

Containerized burnt debris impacted ballast, soil, foam, and water were sampled, analyzed, and profiled as non-hazardous waste. Approximately 80 cubic yards of saturated soil and burnt debris impacted ballast and 30 barrels of foam and water was transported to McKittrick Landfill under a non-hazardous waste manifest.

For reference purposes, soil sample analytical results were compared to SFRWQCB commercial and industrial ESLs , USEPA industrial RSLs, and calculated USEPA RSLs for select perfluoroalkyl acids. In addition, fire suppression water analytical was compared to SFRWQCB industrial ESLs and calculated USEPA RSLs for select perfluoroalkyl acids.

Soil analytical results indicate the presence of arsenic slightly above the SFRWQCB ESL and USEPA RSL; however, at concentrations similar to the background soil sample. PFOS and PFOA are present in soil at varying concentrations above the calculated USEPA RSL.

The incident response water analytical results indicate the presence of limited SVOCs above the SFRWQCB ESLs and the presence of PFBS, PFOS, and PFOA at concentrations above calculated USEPA RSLs.

CLOSING

The response objectives have been met. Please let us know if you have any questions or comments. We look forward to hearing from you.

Sincerely,

Arcadis U.S., Inc.

BOLD - value detected at or above the method detection limit

ESL - Environmental Screening Level

RSL - USEPA Regional Screening Level, Summary Table

NE - not established

SFRWQCB - San Francisco Bay Regional Water Quality Control Board

USEPA - United States Environmental Protection Agency

mg/kg - milligrams per kilogram

µg/L - micrograms per liter

-- not applicable/not analyzed

J - The compound was positively identified; however, the associated numerical value is an estimated concentration only.

1 - Samples collected in glass containers with Teflon lined lids.

< - not detected greater than the indicated reporting level

GHD Inc. (GHD) validated the laboratory results in its Analytical Results and Reduced Validation of Reports; J211807, J211814, J211818, J211832, J211847, and J213035, dated September 24, 2018. Data validation qualifiers presented within this table are in reference to the GHD validation report.

Highlight = Value detected exceeding SFRWQCB ESL

Highlight = Value detected exceeding USEPA RSL

Notes:
BOLD - value detected at or above laboratory method detection limit
ESL - Environmental Screening Level
NE - not established
SFRWQCB - San Francisco Bay Regional Water Quality Control Board
RSL - USEPA Regional Screening Level, Summary Table
USEPA - United States Environmental Protection Agency
µg/L - microgram per liter
-- not applicable/not analyzed
< - not detected greater than the indicated reporting level
J - The compound was positively identified; however, the associated numerical value is an estimated concentration only.
1 - Samples collect in galss containers with Teflon lined lids.
GHD Inc. (GHD) validated the laboratory results in its Analytical Results and Reduced Validation of Reports; J211807, J211814, J211818, J211832, J211847, and J213035, dated September 24, 2018. Data validation qualifiers presented within this table are in reference to the GHD validation report.
Highlight = Value detected exceeding SFRWQCB ESL
Highlight = Value detected exceeding USEPA Calculated RSL

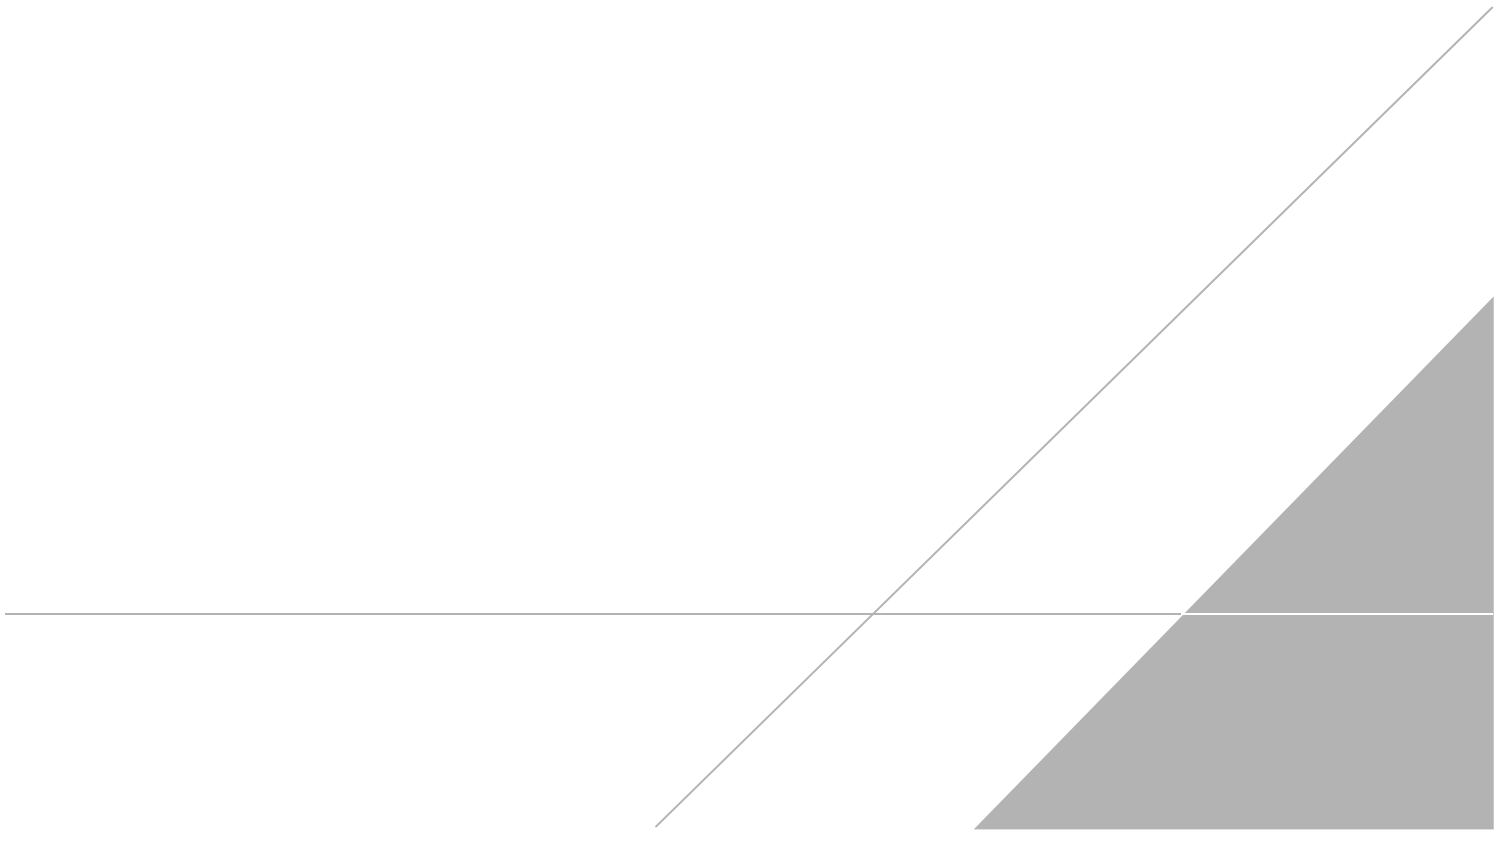
Foam Safety Data Sheet



MATERIAL SAFETY DATA SHEET

CHEMGUARD 3% AFFF C-303

Revision Date: 1/25/2006

1. PRODUCT IDENTIFICATION

Chemical Family: Surfactant mixture; fire fighting foam concentrate
Aqueous Film Forming Foam

Product name: Chemguard 3% AFFF C-303

Manufacturer: Chemguard, Inc.
204 South 6th Ave.
Mansfield, TX 76063
emergency phone: 817-473-9964

2. COMPOSITION / INFORMATION ON INGREDIENTS

		ACGIH/PPM		OSHA/PPM	
CAS NO.	Common Name	TWA	STEL	PEL	% by wt
7732-18-5	water				85% - 90%
57018-52-7	propylene glycol t-butyl ether	not established			2% - 4%
7487-88-9	magnesium sulfate	N/A	N/A	N/A	1% - 2%
proprietary mixture	proprietary hydrocarbon surfactant	N/A	N/A	N/A	proprietary
proprietary mixture	proprietary fluorosurfactant	N/A	N/A	N/A	proprietary

3. HAZARDS IDENTIFICATION

Routes of entry: Dermal, inhalation and ingestion
Potential Health Effects: May cause skin and eye irritation.

Carcinogenicity: Not a carcinogen.

4. FIRST AID MEASURES

Ingestion: Do not induce vomiting. Call a physician.
Inhalation: Remove to fresh air.
Skin: Rinse with water. Wash with soap and water. Contaminated clothing should be washed before re-use.
Eyes: Rinse with water. Call a physician.

5. FIRE FIGHTING MEASURES

Flash Point:	>150°F
Flammable Limits in air (lower % by volume):	not evaluated
Flammable Limits in air (upper % by volume):	not evaluated
Auto-ignition Temperature:	not evaluated

General Hazards: None known.
Fire Fighting Equipment: Self contained breathing apparatus
Fire Extinguishing Media: Water, Foam, Carbon Dioxide, Dry Chemical, Halon
Fire and Explosion Hazards: Decomposition products may be toxic.
Hazardous Combustion Products: oxides of nitrogen, sulfur and carbon

6. ACCIDENTAL RELEASE

Contain spills. Vacuum or pump into storage containers, absorb smaller quantities with absorbent materials, and dispose of properly. Washing area with water will create large amounts of foam.

Dispose of released and contained material in accordance with local, state, and federal regulations. Release to local waste treatment plant only with permission.

7. HANDLING AND STORAGE

Store in original container, or appropriate end-use device. Store at temperatures of 35 - 120 degrees F. If the material freezes, it may be thawed without loss of performance.

8. EXPOSURE CONTROLS, PERSONAL PROTECTION

Eye Protection: Wear side-shield safety glasses.
Skin Protection: Wear latex gloves.
Respiratory Protection: Use organic vapor respirator if needed.

9. PHYSICAL AND CHEMICAL PROPERTIES

Boiling Point:	205° - 212°F
Melting Point:	30° F
Specific Gravity:	1.012 g/ml
Vapor Pressure (mm Hg):	N/A
pH	7.0 - 8.5
Flash Point (PMCC):	>150°F
Vapor Density (air = 1)	N/A
Solubility in water:	100%
Appearance:	clear amber liquid
Odor:	slight solvent odor

10. STABILITY AND REACTIVITY

Stability: Stable
Incompatibility: Strong oxidizers
Hazardous Polymerization: Will not occur.
Decomposition Products: Oxides of nitrogen, sulfur, carbon.

11. TOXICOLOGICAL INFORMATION

Eye Irritation: (Rabbits) mild irritant
Skin Irritation: (Rabbits) minimal irritant

Inhalation Toxicity:	not evaluated
Sensitization:	not evaluated
Teratology:	not evaluated
Mutagenicity:	not evaluated
Reproduction:	not evaluated
Acute Oral Effects (Rats):	not evaluated

12. ECOLOGICAL INFORMATION

	CONCENTRATE	SOLUTION (AS USED)
Chemical Oxygen Demand:	210,000 mg/l	6,300 mg/l
Biological Oxygen Demand (20 day):	79,800 mg/l	2,394 mg/l
Biodegradability (B.O.D./C.O.D.)	38%	38%
Total Organic Carbon:	33,600 mg/l	1008 mg/l
LC50 (96 hour pimephales promelas)	233 ppm	7767 ppm
LC50 (48 hour, daphnia magna)	1110 ppm	37,000 ppm

13. DISPOSAL CONSIDERATIONS

Dispose in accordance with local, state, and federal regulations. Discharge to waste treatment plants only with permission. Anti-foam agents may be used to reduce foaming in waste streams.

14. TRANSPORTATION INFORMATION

Department of Transportation proper shipping name: not regulated

15. REGULATORY INFORMATION

All ingredients are on the TSCA inventory.
No components are reportable under SARA Title III, sec. 313
No components are priority pollutants listed under the U.S. Clean Water Act Section 307 (2)(1) Priority Pollutant List (40 CFR 401.15).
No components are reportable under **CERCLA**.

16. OTHER INFORMATION

NFPA Hazard Ratings		**HMIS Identification System**
1	Health Hazard Rating	1
1	Flammability Rating	1
0	Instability/Reactivity Rating	0

CHANGE LOG:

Revision 2 - Revision date changed.

3% AFFF Foam Concentrate C303

Chemguard 3% AFFF is a specially formulated, synthetic, aqueous film forming foam concentrate. A vapor suppressing aqueous film is formed by the foam solution draining from the expanded foam blanket. It is intended for use at a proportioning rate of 3% (3 parts AFFF concentrate to 97 parts water) on Class B hydrocarbon type fuels such as gasoline, kerosene, diesel, etc. Chemguard 3% AFFF is not intended for use on fuels, which are polar solvent/water miscible such as alcohols, ketones, esters, etc.

FEATURES

- U.L. Listed, Foam Liquid Concentrates
- U.L. recommended application rate on hydrocarbon type fuels is .10/gpm ft².
- U.L. Canada Listed
- Performance to ICAO, Doc. #9137, Part 1, Chapter 8, Level "B" verified
- Suitable for use with fresh or salt water
- Excellent wetting characteristics when used in combating Class "A" fuel fires
- Suitable for use with both aspirating foam and standard water fog nozzles
- Suitable for use with deluge or closed head foam water sprinkler systems
- If inadvertently frozen, thawing will render product completely serviceable again
- Suitable for use with carbon steel, fiberglass, polyethylene or stainless steel. Chemguard 3% AFFF is not compatible with galvanized pipe or fittings in an undiluted form.
- Suitable for use with siliconized dry chemical extinguishing agents

PROPORTIONING

- Fixed or portable in-line eductors
- In-line balanced pressure and pump pressure proportioning skid
- Bladder tank balanced pressure proportioning systems
- Around the pump proportioners
- Handline, air-aspirating nozzles with fixed eductor pickup tube

DISCHARGE DEVICES

- Foam Chambers
- Air-aspirating and non air-aspirating sprinkler heads or spray nozzles
- Standard water fog nozzles for handlines and monitors
- Air-aspirating foam nozzles
- Foam makers for use with either Floating Roof storage tanks or Dike/Bund protection systems
- High back pressure foam makers for sub-surface base injection system (hydrocarbon type fuels only)

APPLICATIONS

- Crash Fire Rescue
- Storage Tanks(non-polar solvent type fuels only)
- Truck/Rail Loading or Unloading Facilities
- Processing/Storage Facilities
- Docks/Marine Tankers
- Flammable Liquid Containment Areas
- Mobile Equipment

FOAMING PROPERTIES

Aspirating type discharge devices typically generate expansion ratios between 6-10 to 1 when 3% AFFF is mixed with water at the correct ratio. Non-aspirating type devices will typically generate expansion ratios of between 2-4 to 1. Expansion ratios are dictated by the type of discharge devices, flow rate and discharge pressure.

TYPICAL PROPERTIES AT 77°F (25°C)

Appearance.....Clear Slightly Yellow
Specific Gravity.....1.020
pH.....7.7
Viscosity.....1.5 cps

ENVIRONMENTAL IMPACT

Chemguard 3% AFFF is biodegradable, low in toxicity and can be treated in sewage treatment plants. Please refer to Chemguard Technical Bulletin regarding foam products and the environment.

STORAGE

If kept in the original unopened and airtight Chemguard supplied container and stored within the temperature range of 35°F - 120°F (2°C - 49°C) a shelf life of between 20-25 years can be expected. When stored in other than the manufacturers supplied container, please check with Chemguard for storage guidelines.

ORDERING INFORMATION & WEIGHT

Part No:	Container	Weight
C303P	5-Gallon Pail / 19 Liters	45 lbs.
C303D	55-Gallon Drum / 208 Liters	495 lbs.
C303BD	330-Gallon Tote / 1249 Liters	3000 lbs.

RE: CITY DIRECTORY RESEARCH
LOSSAN CCMF
LOSSAN Central Coast Maintenance Facility San Luis Obispo, CA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

2400-2699 of Victoria Ave
800-899 of Francis Ave
800-999 of Humbert Ave
2700-2799 of McMillan Ave

ENVIRONMENTAL LIEN REPORT

Order No: *20200804253-1*

The ERIS Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- Search for parcel information and / or legal description
- Search for ownership information
- Research official land title documents recorded at jurisdictional agencies such as recorder's' office, registries of deeds, county clerks' offices, etc.
- Access a copy of the deed
- Search for environmental encumbrance(s) associate with the deed
- Provide a copy of any environmental encumbrance(s) based upon a review of keywords in the instrument(s) (title, parties involved and description)
- Provide a copy of the deed or cite documents reviewed

Thank You for Your Business
Please contact ERIS at **416-510-5204** or **info@erisinfo.com**
with any questions or comments

LIMITATION

This report is neither a guarantee of title, a commitment to insure, or a policy of title insurance. ERIS – Environmental Risk Information Services does not guarantee nor include any warranty of any kind whether expressed or implied, about the validity of all information included in this report since this information is retrieved as it is recorded from various agencies that make it available. The total liability is limited to the fee paid for this report.

ENVIRONMENTAL LIEN REPORT

Order No: *20200804253-1*

The ERIS Environmental Lien Search Report is intended to assist in the search for environmental liens filed in land title records.

Appendix H. Site Photographs

Taken October 6 and 7, 2020

This page is intentionally blank.

Photo 1. The northern extent of the Project Study Area, at the San Luis Obispo Railroad Museum. The view is to the south.

Photo 2. The northern extent of the Project Study Area. Underground utility markings note the presence of high-pressure gas lines below the tracks. The view is to the east.

Photo 3. Two 55-gallon drums of synthetic motor oil were located next to a storage container near the northern end of the Project Study Area. One drum was full and the other half full. Both were labeled and looked new but were not secured or placed on secondary containment.

Photo 4. The motor oil drums were located on the eastern side of the storage container. The view is to the north.

Photo 5. A fenced storage area located on the eastern side of the Project Study Area contained several drums of Elastocast® resin. Most of the lids were not secured, and they were placed on timbers. The view is to the south.

Photo 6. A stockpile of soil containing broken concrete, asphalt, and metal fragments was located on the Project Study Area, near the end of the Railroad Museum's track. The view is to the north.

Photo 7. The western side of the Project Study Area, and the copse of eucalyptus trees at the end of Roundhouse Street. The view is to the south.

Photo 8. Footings and foundations of the historic roundhouse were located in the center of the Project Study Area. The view is to the east.

Photo 9. Several stockpiles of construction demolition waste were located near the historic roundhouse. They were segregated into piles of soil, concrete, gravel, and asphalt. The view is to the north.

Photo 10. The southern half of the historic roundhouse Study Area was located adjacent to the new townhouse development on Emily Street. The view is to the south.

Photo 11. The ground surface between the Project Study Area and the properties to the east slopes down, away from the railroad ROW. These townhouses are located on the Emily Street Development at 645 and 2201 Emily Street. The view is to the southwest.

Photo 12. Wet ground, salt deposits on the surface, and cattails indicated the presence of a groundwater seep near the railroad tracks, southeast of the 1923 retaining wall. The view is to the north.

Photo 13. The semicircular retaining wall, dated 1923, was located opposite the roundhouse storage track area. The view is to the northeast.

Photo 14. Historical records identify this concrete bunker structure as a former Southern Pacific Railroad oil house. Hose connections were located on the northeastern side, and a steel plate was welded over the former door on the southwestern side. The view is to the west.

Photo 15. Several buildings associated with the multiple underground fiber optic cables were located on the Project Study Area. The fenced areas also contained two propane tanks. The view is to the south.

Photo 16. Another fiber optic utility building was located near the southern extent of the Project Study Area. It contained a backup diesel generator. The view is to the southeast.

Photo 17. A small fenced area was located near the southern end of the Project Study Area. It was a privately owned parcel that is intended to be a radio antenna/transmitter in the future. The view is to the east.

Photo 18. A storm drain culvert was located near the southern extent of the Project Study Area. The view is to the southeast.

Photo 19. The door of the long fiber optic utility building indicated the presence of an emergency backup generator and diesel fuel. The fuel tank is probably attached to the underside of the generator, according to the fire department.

Photo 20. The southern extent of the Project Study Area, at Morrison Street. The view is to the northeast.

Photo 21. The San Luis Obispo train station was located approximately 0.25 mile north of the Project Study Area. The view is to the northeast.

Photo 22. A plaque inside the train station indicated that the railroad tracks were originally constructed in 1894.

Photo 23. 1960 Santa Barbara Street, the Former S&S Auto Electric site was the San Luis Obispo Railroad Museum, located adjacent to the northern extent of the Project Study Area, and with the address of 1940 Santa Barbara Street. The museum was temporarily closed. The view is to the southeast.

Photo 24. 642 Emily Street, the Old City Corporation Yard site. The site had been recently redeveloped into townhouses, with the address of 2220 Emily Street. No indications of environmental investigations, cleanup, or monitoring were present. The view is to the northeast.

Photo 25. 645/2201 Emily Street, the Emily Street Development site. The site had been recently developed into townhouses. No indications of environmental investigations, cleanup, or monitoring were present. The view is to the southeast.

Photo 26. 1310 Roundhouse Avenue, the Sears #6858 site, had been redeveloped into a warehouse and co-working space that was under construction. The view is to the northwest.

Photo 27. The Project Study Area at the end of Roundhouse Avenue, adjacent to the former Sears #6858 site and the copse of eucalyptus trees. The view is to the north.

Photo 28. 2160 Santa Barbara Avenue, San Luis Obispo Fire Station #1 and the former Southern California Gas Company site. The view is to the south.

Photo 29. The parking lot and yard of Fire Station #1 from Roundhouse Avenue. A diesel AST and dispenser were present. No indications of investigations, cleanup, or monitoring were present. The view is to the south.

Photo 30. The northeastern corner of the Fire Station #1 site. The view is to the west.

Photo 31. 1180 Roundhouse Street, the Morganti Warehouse site. The warehouse structure appeared unchanged from historical photos. No indications of releases or cleanup activities were present. The view is to the north.

Photo 32. 2450 Victoria Avenue, the former Sand Luis Garbage Company had been redeveloped into townhouses called “The Yard”. The address 2540 Victoria Avenue sometimes used in site records was incorrect and does not exist. The view is to the southeast.

Photo 33. The UPRR Round House/Pond Site at the end of Alphonso Street was turned into a paved parking lot in 2011. No indications of remediation activities documented in the historical records were present. The elevation of the parking lot was 4 to 5 feet below the elevation of the Project Study Area, located adjacent to the east. The view is to the northwest

Photo 34. The driveway to the UPRR Round House/Pond Site parking lot sloped down toward Emily and Alphonso Streets. The view is to the east.

Photo 35. 2584 Victoria Avenue, Rizzoli's Automotive, was in a similar configuration to the historical records. The topography of the site sloped to the southwest, away from the Project Study Area. The view is to the north.

Photo 36. The rear entrance of the Rizzoli's Automotive site from Francis Street. No indications of investigations or cleanup were present. The view is to the west.

Photo 37. 937 Southwood Drive, the San Luis Obispo School District Bus Yard. The site was located to the northeast (upgradient) of the southern extent of the Project Study Area. A fuel AST and dispenser were present on the site. The view is to the west.

1 Introduction

The purpose of the Water Quality Technical Memorandum (WQTM) is to fulfill the requirements of the California Environmental Quality Act (CEQA), and to comply with the National Pollution Discharge Elimination System (NPDES) permitting processes. The WQTM includes a discussion of the Central Coast Layover Facility Project (Project), the physical setting of the area within the Project limits, and the regulatory framework with respect to water quality. The WQTM also provides pertinent information regarding the surface water resources within the Project limits and surrounding area and the water quality of these waters. In addition, the WQTM describes the water quality impairments and beneficial uses, identifies potential water quality impacts/benefits associated with the proposed Project, discusses temporary and permanent water quality issues, and recommends avoidance and minimization measures for potential impacts.

This page is intentionally blank.

2 Project Description

2.1 Project Overview

The Los Angeles – San Diego – San Luis Obispo (LOSSAN) Rail Corridor Agency is proposing the relocation and expansion of the existing Pacific Surfliner layover track and facility, located at the northern end of the LOSSAN rail corridor in San Luis Obispo, California. The proposed Central Coast Layover Facility Project would increase overnight layover and storage capacity to support the service goals and objectives outlined for the Pacific Surfliner in both the 2018 California State Rail Plan (State Rail Plan) and the LOSSAN Rail Corridor Agency's Fiscal Year 2019-20 and 2020-21 Business Plan (Business Plan).

Currently, one Pacific Surfliner train overnights each day in San Luis Obispo for an early morning departure the following day. Both the State Rail Plan and the LOSSAN Agency Business Plan identify growth in the service levels of the Pacific Surfliner to San Luis Obispo. As currently configured, the existing single-track facility does not have the capacity to accommodate any growth in service levels beyond the current service. The proposed Project will facilitate the maintenance of equipment at the northern terminus of the LOSSAN rail corridor. It will allow additional passenger trains to be maintained, serviced and stored in San Luis Obispo overnight with no impact to the operations of Union Pacific, allowing a second, more convenient, morning departure from San Luis Obispo, subject to Union Pacific approval of the proposed schedule. It will also provide for the opportunity to store and service additional train sets used for further expansion of the Service.

2.2 Project Location

The Project site is located on approximately 13 acres of relatively undeveloped land in the City of San Luis Obispo, which is situated along the Central Coast region of California, approximately 190 miles north of Los Angeles (Figure 1). The existing Pacific Surfliner layover facility is located directly across from the San Luis Obispo Amtrak Station, located at 1011 Railroad Avenue. The Project site is located approximately 0.3-mile south of the San Luis Obispo Amtrak Station. The Project site extends from south of the San Luis Obispo Railroad Museum's parking lot to east of Lawrence Drive. The Project site is between the Union Pacific Main Tracks and existing commercial and residential development to the west.

As shown on Figure 2, the Project site is located entirely within the City of San Luis Obispo's Railroad Historic District (District). The District boundary covers approximately one-half square mile and extends along the railroad right-of-way for about 1.7 miles in roughly a north-south axis. The District includes the original railroad yard, plus residential and commercial-zoned property on the west side of the railroad right-of-way (City of San Luis Obispo Community Development Department 1998).

Figure 1. Regional Location

This page is intentionally blank.

Figure 2. Project Limits

This page is intentionally blank.

2.3 Proposed Project

The proposed Project includes the construction of a new rail yard, storage and servicing tracks, operations and maintenance buildings, landscape improvements, and safety and security features. Perimeter fencing would be installed around the facility for site security and public safety.

2.3.1 Rail Yard and Tracks

The proposed Project would construct a new rail yard with up to five new tracks, with Track 1 positioned as the westernmost track and Track 5 positioned as the easternmost track.

- Track 1 – Bypass and wash track with train wash building
- Track 2 – Storage track with service and inspection (S&I) position
- Track 3 – Storage track
- Track 4 – Storage track
- Track 5 – Storage track

Trains would enter the site from the mainline switch at the north end of the site, passing through the Train Wash on Track 1. Trains would travel south, passing the train wash building onto the tail track and then reverse direction into either S&I position or to one of the other storage tracks. Upon reaching the S&I position or a storage track, the trains would park for the night, connecting to ground power to allow for the electric functions of the train to continue and connecting to a yard air compressor to keep the brake system charged. These connections allow for continuity of these functions without the locomotive engine running, minimizing engine idling within the facility.

From the S&I or storage positions, daily servicing and light maintenance can occur. Trains stored on the S&I track would also undergo additional safety, operational and reliability inspections.

Trains would exit the facility north toward the San Luis Obispo station at intervals based on the approved and published service schedules.

2.3.2 Buildings

The proposed Central Coast Layover Facility would consist of a series of single-story structures housing a variety of functions including office space, storage space, workshops, train wash, train S&I and wheel truing.

Operations/Fleet Maintenance Building. The Operations Building would be an approximately 3,000 square foot one-story building, which would house administrative offices and restrooms for operations and maintenance staff.

Fleet Maintenance Shops Building. The Fleet Maintenance Shops Building would be a one-story building and approximately 2,900 square feet, and would house a welding/fabrication shop, brake and coupler shop, and toolbox storage.

Parts Storeroom Building. The Parts Storeroom Building would be a one-story building, approximately 1,500 square feet, located adjacent to the Fleet Maintenance Shops Building and Maintenance of Way Building. This building would store components and parts that are required on a frequent basis to support maintenance activities, and would include a dedicated secure area for shipping, receiving and storage.

Maintenance of Way (MOW) Building. The MOW Building would be a one-story building, approximately 2,200 square feet, located adjacent to the Parts Storeroom Building. MOW is responsible for inspection and maintenance of track, roadbed, and buildings. MOW is also responsible for inspection and maintenance of non-revenue vehicles assigned to the Central Coast Layover Facility.

Wash Building. The Wash Building would be a 9-10,000 square feet one-story building, located at the center of the Project site on Track 1. An automatic, drive-through train wash would be enclosed in the Wash Building. As described above, trains entering the maintenance facility would pass through the Train Wash Building for cleaning prior to being placed on one of the storage tracks.

The train wash would operate 7 days per week. Each train arriving at the facility at the end of its service day will enter through the wash, requiring it to run for about 5-10 minutes for each train. The timing of the train wash operation will depend on the approved and published service schedule and would likely be during the evening hours.

Wheel Truing Building. The Wheel Truing Building would be a one-story building, approximately 1,900 square feet in size and located at the north end of the Project site adjacent to the San Luis Obispo Railroad Museum parking lot. The Wheel Truing Building would house an underfloor pit-mounted wheel truing machine. Use of this facility is anticipated to be infrequent and not part of the daily operation.

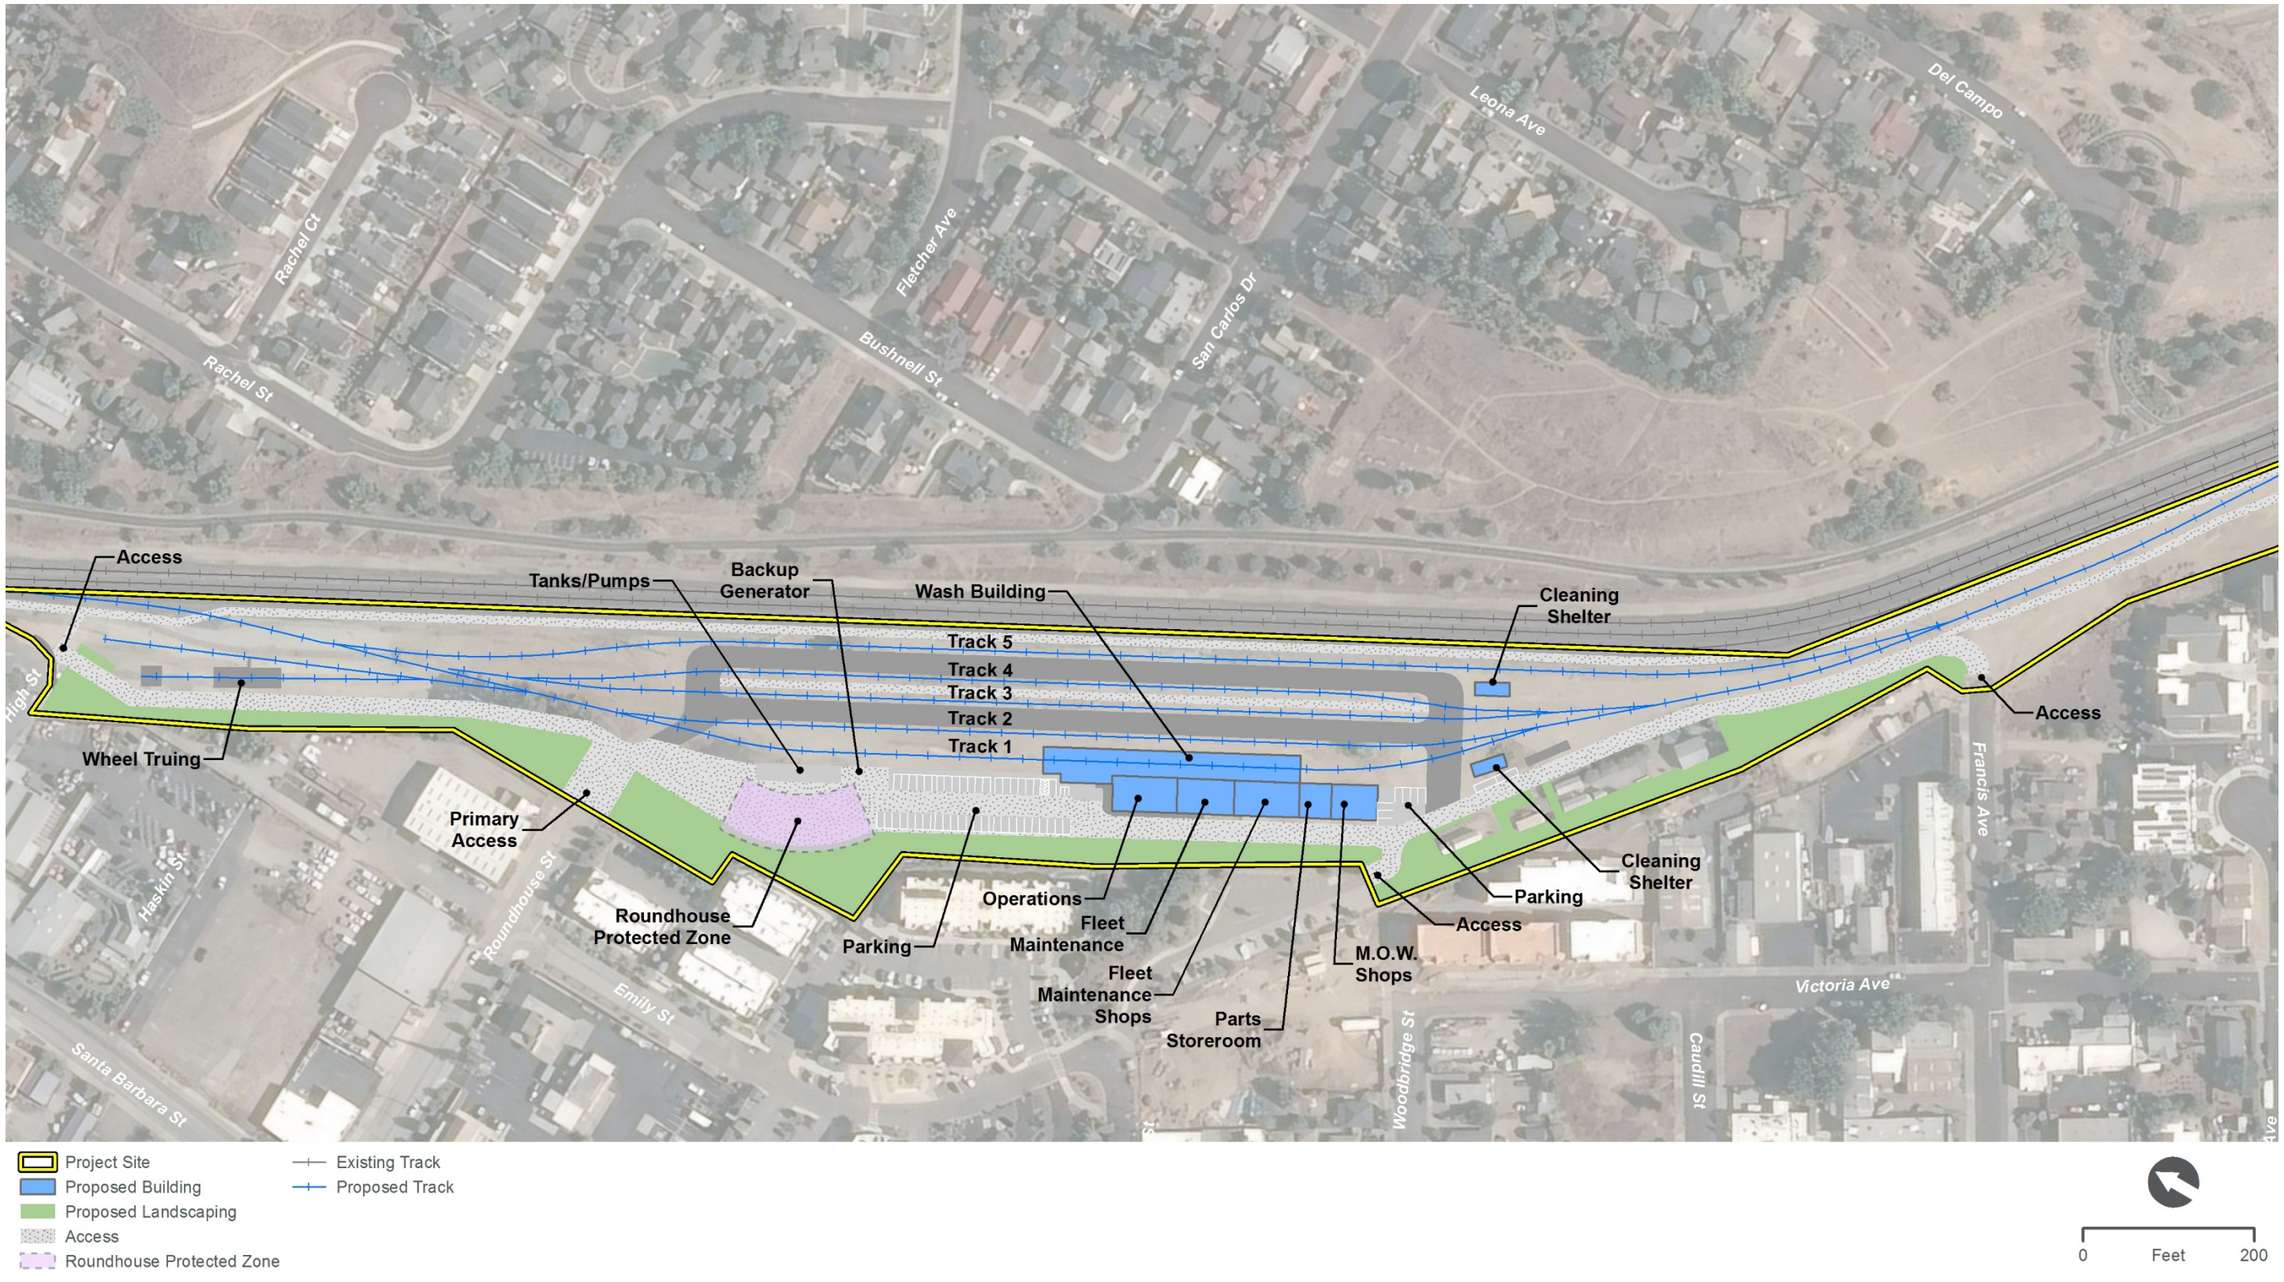
2.3.3 Service and Inspection Shelter

Track 2 would function as a storage track with an S&I position. The S&I track would be covered by a 24' high shelter. To provide access to the underside of a train for inspection and maintenance, a lower-level work area or gauge pit would be installed.

2.3.4 Cleaning Shelters

Two cleaning shelters would be provided south of the Wash Building and storage tracks.

Figure 3. Site Plan



This page is intentionally blank.

2.3.5 Parking

The proposed Project would provide a total of 54 on-site parking spaces for employees and visitors. Most of the parking spaces would be located on the west end of the central yard in between the Roundhouse Site and Operations building. The other parking spaces would be located adjacent to the MOW Shops building.

2.3.6 Access

Primary employee and visitor access to the site would be from Roundhouse Avenue. Additional emergency access to the site would be available from the train museum parking lot (north end of site), from the parking lot off Alphonso Street (center of site), and from Francis Avenue (south end of site).

2.3.7 Landscape Plan

The proposed Project would install landscaping to minimize sound by absorbing ambient noise and provide a visual buffer by screening the rail maintenance operations from adjacent neighboring residential and recreational uses. The Project's plant palette will be comprised of species native or fully adapted to San Luis Obispo's climate. The list of species will draw from the San Luis Obispo County-Approved Plant List and the Calscape, or California Native Plant Society, database of plants native to the area. Species will be selected to be relatively low maintenance, have minimal leaf litter, and be non-fruiting so as not to attract vectors or birds.

East Landscape Buffer

Single-family residences overlook the east edge of the Project site, with views toward the hills of the surrounding regional open space west of the city. A Class I bike trail traverses the Historic Railroad District, connecting to regional trails and other San Luis Obispo recreation sites.

Landscape material for the east buffer will be congruent with the existing plant palette – a diverse mix of native/adaptive species consistent with the California chaparral and foothill meadow plant communities. The main objective in enhancing the landscape buffer at the east edge is to frame views over the existing rail yard toward the distant hills, screening the Project site and its enhanced maintenance operations.

West Landscape Buffer and Class I Bike Trail

Multi-family condominiums and apartments are located adjacent to the Project site's western edge. The majority of the on-site landscape buffer area is to be established between the proposed rail improvements and maintenance program elements and these adjacent residences.

Additionally, a new segment of Class I bike trail, from approximately McMillan Avenue to the Amtrak Station, is identified in the City of San Luis Obispo's Active Transportation Plan's Tier 3 Project List as a future Class I trail connecting existing Class I, II, and III segments to comprise the Railroad Safety Trail. This portion is approximately 0.84 miles of new Class I trail. Should project conditions, land use, and right-of-way alignments allow, the proposed project would construct a portion of the new segment of Class I bike trail, from approximately High Street to Francis Street.

The bike path would meander slightly through the landscape buffer, providing users distance from the rail yard operations and limiting the impact of trail activity noise on the adjacent residential communities. This new connection would provide largely protected bike and pedestrian trail access

from the Old Town Historic District through the Railroad Historic District, from the San Luis Obispo Railroad Museum, past the rail yard at Project site, and back into the urban fabric of housing and light commercial use.

2.3.8 Roundhouse Protected Zone

The new segment of Class I bike trail presents the opportunity to facilitate public view of the historic site of the Southern Pacific Railroad roundhouse, where the structure's remnant foundation remains visible. Hosting the last steam locomotive in 1956, the roundhouse was demolished in 1959, with the train depot following in 1971, and finally, the turntable in 1994. The unique historic relevance of the roundhouse continues the rail history narrative set by the Railroad Museum to the north and reinforces the area's designation as the Railroad Historic District.

The Project's program elements would be arranged to avoid significant impact to the roundhouse footing, preserving as much exposed surface for view as possible. The proposed Project would install a transparent perimeter fence along the southwest edge of the roundhouse, where bench seating and interpretive signage will be sited to create an informational node along the active transportation corridor.

2.3.9 Site Security

The site perimeter would be secured with an 8-foot transparent anti-climb fence. Motorized vehicular gates would be provided at all egress/ingress points. Video surveillance cameras would also be installed along the perimeter of the site.

2.3.10 Phasing

Funding is currently not available to construct the entire facility at once. Instead, a phased construction approach is intended, constructing an initial portion of the facility which includes the most immediately needed elements, and adding the remaining components as the need arises and additional funding becomes available. The following sections identify the components that would be constructed under Phase 1 and later phases of the proposed project.

Phase 1

Phase 1 intends to meet or exceed the functionality of the existing layover facility and add layover capacity for at least one additional train. This initial phase would include landscaping and trail enhancements around the Phase 1 footprint as well as water quality improvements and underground utility services to serve the ultimate facility. Phase 1 would include the following project components:

- North portions of West Landscape Buffer, 30 feet with pedestrian/bike path, 20-foot minimum setback plus 10 feet
- East Landscape Buffer, green space enhancement wrapping the existing bike path north-to-south
- Upper Yard/Lower Yard site improvements including:
    - Civil topography, grading, drainage, stormwater utilities
    - North-to-south 20-foot access drive, yard paving and service roads
    - Improvements at "Roundhouse Protected Zone"

  - Yard perimeter fencing and gates at access points - one (1) main entry at Roundhouse Street (north end of Central Yard); three (3) emergency access points (north and south end of site, south end of Central Yard); fencing only around yard body
  - All railroad maintenance roads and mainline east / west perimeter fencing; yard paving and site access roads
  - Trackside shelters and services including waste / recycling enclosure
- Temporary portable buildings for essential work functions
- 1 S&I Position, gage pit with canopy
- 2 storage tracks, including S&I track
- Yard / Exterior Area site improvements including partial build-out of parking and driveway

Later Phases

Later phases would include the remaining Master Plan components as dictated by operational needs and as allowed by available funding. Initially this would focus on all items identified as essential components of the ultimate facility, followed later by those features that would expand overall capacity of the facility, as well as enhance operations and efficiency, but which are not immediately mandatory. The following project components could be constructed on the project site based on operational needs and available funding:

- Remaining portions of West Landscape Buffer, 30 feet with pedestrian/bike path, 20-foot minimum setback plus 10 feet
- Yard/Exterior Area site improvements remaining from Phase 1 including parking, driveway, laydown and enclosed yard areas, emergency generator
- 1 wash track with Train Wash Building foundation and pit / infrastructure
- 1 south tail track and connection
- 3 locomotive storage tracks, including 1 extended-length storage track
- Facility Structures (core/shell, interior build-out, equipment installation)
  - Operations (administration)
  - Fleet Maintenance
  - Fleet Maintenance Shops
  - Parts storeroom
  - MOW Shops foundation/pad
  - Train Wash Building, structure/wash arch/canopy
  - Wheel Truing Building and Support Areas
  - Fueling structure and arch
- Wheel Truing Building trackwork and switch
- Retaining wall and grading to support wheel truing building and trackwork

2.3.11 Construction

As described above, funding is currently not available to construct the entire facility at once. Therefore, a phased construction approach is intended, constructing the Phase 1 project components first, and adding the remaining components as the need arises and additional funding becomes available. The following sections provide details regarding the project timeline and construction process.

Phase 1

Project construction for Phase 1 would begin as early as April 2024 and last for approximately 19 months. The work would begin with ground improvements to prepare the site for construction of buildings. Once the buildings are constructed the tracks would be installed. Construction may involve multiple crews working simultaneously and would include equipment such as track stabilizers, excavators, front-end loaders, rubber-tired dozers, cranes, haul trucks, and water trucks.

A summary of the construction activities associated with Phase 1 is provided below:

- Demolition and Rough Grading
- Utility Relocations
- West/East Landscape Buffer and Bike Path
- Access Drive, yard paving and service roads
- Fencing
- S&I Position, gage pit with canopy
- Storage track and 2 turnouts
- Exterior parking and driveway

Later Phases

Project construction for the later phases would be approximately 16 months in duration. Mobilization and demobilization time would add to the duration for later phases depending on how they end up being broken out, though breaking the remaining work into smaller phases would reduce the magnitude of impact for each smaller phase. A summary of the construction activities associated with later phases is provided below:

- West/East landscape buffer and bike path
- Exterior parking and driveway
- Track construction and 10 turnouts
- Operations building
- Fleet maintenance building
- Parts storeroom
- MOW shops foundation/pad
- Train wash building
- Wheel truing building

- Retaining wall
- Fueling structure

Construction Staging and Access

Material and equipment imports and construction personnel would access the Project study area via walking points from the nearest fence access or staging area. Most construction equipment would be brought to the project site at the beginning of the construction process during construction mobilization and would remain on-site throughout the duration of the construction activities for which they were needed

Construction activities would be scheduled during time frames that allow for exclusive track occupancy by construction crews to minimize effects on LOSSAN operations. To the greatest extent possible, construction activities would be scheduled during the daytime. No weekend work is anticipated.

This page is intentionally blank.

3 Regulatory Background

There are federal, state, and local regulations that are designed to protect water quality. Water quality in the Project area is regulated by the Central Coast Regional Water Quality Control Board (Region 3) through the Water Quality Control Plan (Basin Plan) for the Central Coast Basin (2019).

This Project must conform to all applicable water quality regulations and/or permit requirements of the State Water Resources Control Board and any applicable Central Coast Regional Water Quality Control Board and local requirements including, but not limited to:

- The Construction General Permit (CGP) (Order No. 2009-009-DWQ), adopted September 2, 2009, became effective July 1, 2010. This permit has since been amended twice by Orders No. 2010-0004-DWQ and 2012-0006-DWQ, which are currently in effect. The CGP regulates stormwater discharges from construction sites that result in a disturbed soil area of 1 acre or greater and/or are smaller sites that are part of a larger common plan of development. By law, all stormwater discharges associated with construction activity where clearing, grading, and excavation result in soil disturbance of at least 1 acre must comply with the provisions of the CGP. Construction activity that results in soil disturbances of less than 1 acre is subject to this CGP if there is potential for significant water quality impairment resulting from the activity as determined by the Regional Water Quality Control Board. Operators of regulated construction sites are required to develop Stormwater Pollution Prevention Plan (SWPPP); implement sediment, erosion, and pollution prevention control measures; and obtain coverage under the CGP.
- On April 30, 2003, as part of Phase II, the State Water Resources Control Board issued a General Permit for the Discharge of Stormwater from Small Municipal Separate Storm Sewer Systems (MS4) (Order No. 2003-0005-DWQ) to provide permit coverage for smaller municipalities (population less than 100,000), including non-traditional Small MS4s, which are facilities such as military bases, public campuses, prisons, and hospital complexes. The Phase II Small MS4 General Permit covers Phase II Permittees statewide. On February 5, 2013, the current Phase II Small MS4 General Permit (Order No. 2013-0001-DWQ) was adopted and became effective on July 1, 2013. The City of San Luis Obispo is a permittee of the Phase II permit. The LOSSAN Rail Corridor Agency was not included in the permit as a non-traditional Small MS4.
- The Statewide General Permit for Stormwater Discharges Associated with Industrial Activities, Order 2014-0057-DWQ implements the federally required stormwater regulations in California for stormwater associated with industrial activities discharging to waters of the United States (U.S.). The Industrial General Permit (IGP) regulates discharges associated with 10 federally defined categories of industrial activities. The IGP requires the implementation of Best Management Practices (BMP), a site-specific SWPPP, and monitoring plan. The IGP also includes criteria for demonstrating no exposure of industrial activities or materials to stormwater and no discharges to waters of the U.S.

- Stormwater discharge is regulated under Chapter 12.08 – Urban Storm Water Quality Management and Discharge Control of the City of San Luis Obispo Municipal Code. Under Chapter 12.08, discharge of non-stormwater is permissible only when connection to the storm drain system is made in accordance with a valid City of San Luis Obispo permit, approved construction plan, or a NPDES permit and/or Notice of Intent. In addition, projects within the City of San Luis Obispo are required to comply with the requirements of the CGP and the Municipal NPDES Permit, which includes preparation of a SWPPP and implementation of construction and post construction BMPs.

4 Affected Environment

4.1 Hydrology

The proposed Project is in the Lower San Luis Obispo Creek Hydrological Sub-Area 18060060702 (HUC-12) based on the Watershed Boundary Dataset (Figure 4). It is also in the San Luis Obispo Creek Hydrological Sub-Area 310.24 of the Estero Bay Hydrological Unit Area (310) consistent with the Basin Plan. As such, the Project is tributary to the San Luis Obispo Creek, and is also in the Lower San Luis Obispo City of San Luis Obispo sub-watershed identified in the City of San Luis Obispo Drainage Design Manual (Figure 5).

The San Luis Obispo Creek watershed generally drains to the south-southwest via San Luis Obispo Creek where it meets the Pacific Ocean at Avila Beach. San Luis Obispo Creek originates in the Cuesta Grade area north of San Luis Obispo at an elevation of 2,200 feet above mean sea level, in the western slopes of the Santa Lucia Range. San Luis Obispo Creek flows south through the City of San Luis Obispo easterly adjacent to U.S. Highway 101 until it reaches the southern extent of the Irish Hills where it veers west to the ocean.

The main drainage feature is an existing 24-inch reinforced concrete pipe that crosses the middle of the Project site. This private storm drain conveys runoff from the east to the west side of the Project. The site either surface drains separate from or drains offsite along this storm drain.

Based on the Final 2018 California Integrated Report (Clean Water Act Section 303(d) List / 305(b) Report) approved by the State Water Resources Control Board and U.S. Environmental Protection Agency, San Luis Obispo Creek (below Osos Street) is listed on the 303(d) list for Total Maximum Daily Load requirements for nitrate, sodium, chloride, dissolved oxygen, fecal coliform, Escherichia coli, and benthic community effects.

The Project is in an urbanized area. No designated wild or scenic rivers are located with the Project vicinity.

4.2 Groundwater

The project site is not underlain by a groundwater basin. However, the surface watershed is adjacent to the San Luis Obispo Valley Groundwater Basin, Area 3-9 (California Department of Water Resources 2003). The project site is tributary to this groundwater basin and the groundwater basins lying beneath the watershed conform with the watershed boundaries and have strong hydrologic connections. During drier times the aquifer is recharged by San Luis Obispo Creek, but during wet years the aquifer may also contribute flow to the creek through seeps. This groundwater supply is also important as nearly 409 acre-feet of groundwater per year are withdrawn for agriculture (California Coastal Conservancy 2002).

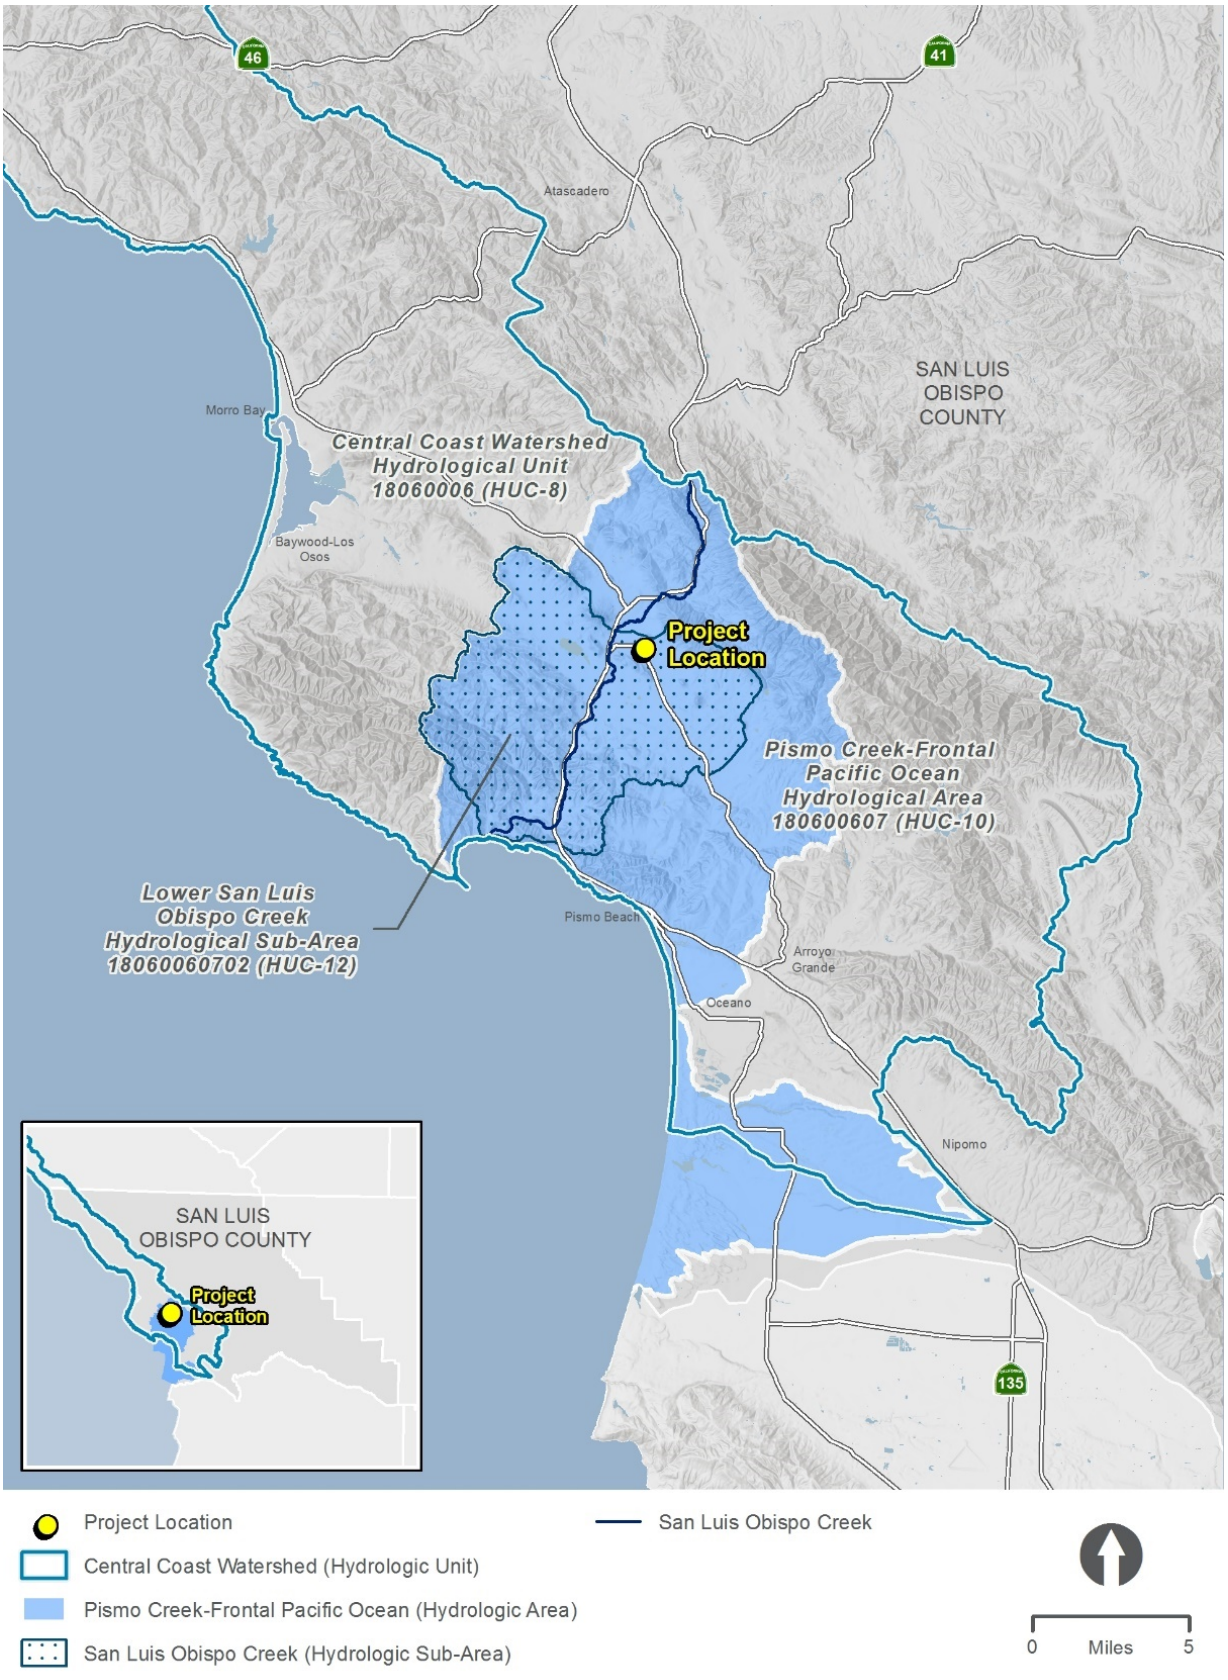
The municipal water supply for San Luis Obispo, however, does not come from within the San Luis Obispo Creek Watershed. It is imported from neighboring watersheds to the north.

The Project is in the San Luis Obispo Valley groundwater basin (No. 3-9).

According to the Hydrologic Report (County of San Luis Obispo 2005) whose data is pulled from Bulletin 118, there are no public wells within a mile of the project. The closest public wells are West San Luis and East San Luis to the southwest and southeast about 8,000 and 7,000 feet, respectively. The ground surface elevation for West San Luis well is 118.9 feet with the groundwater elevation

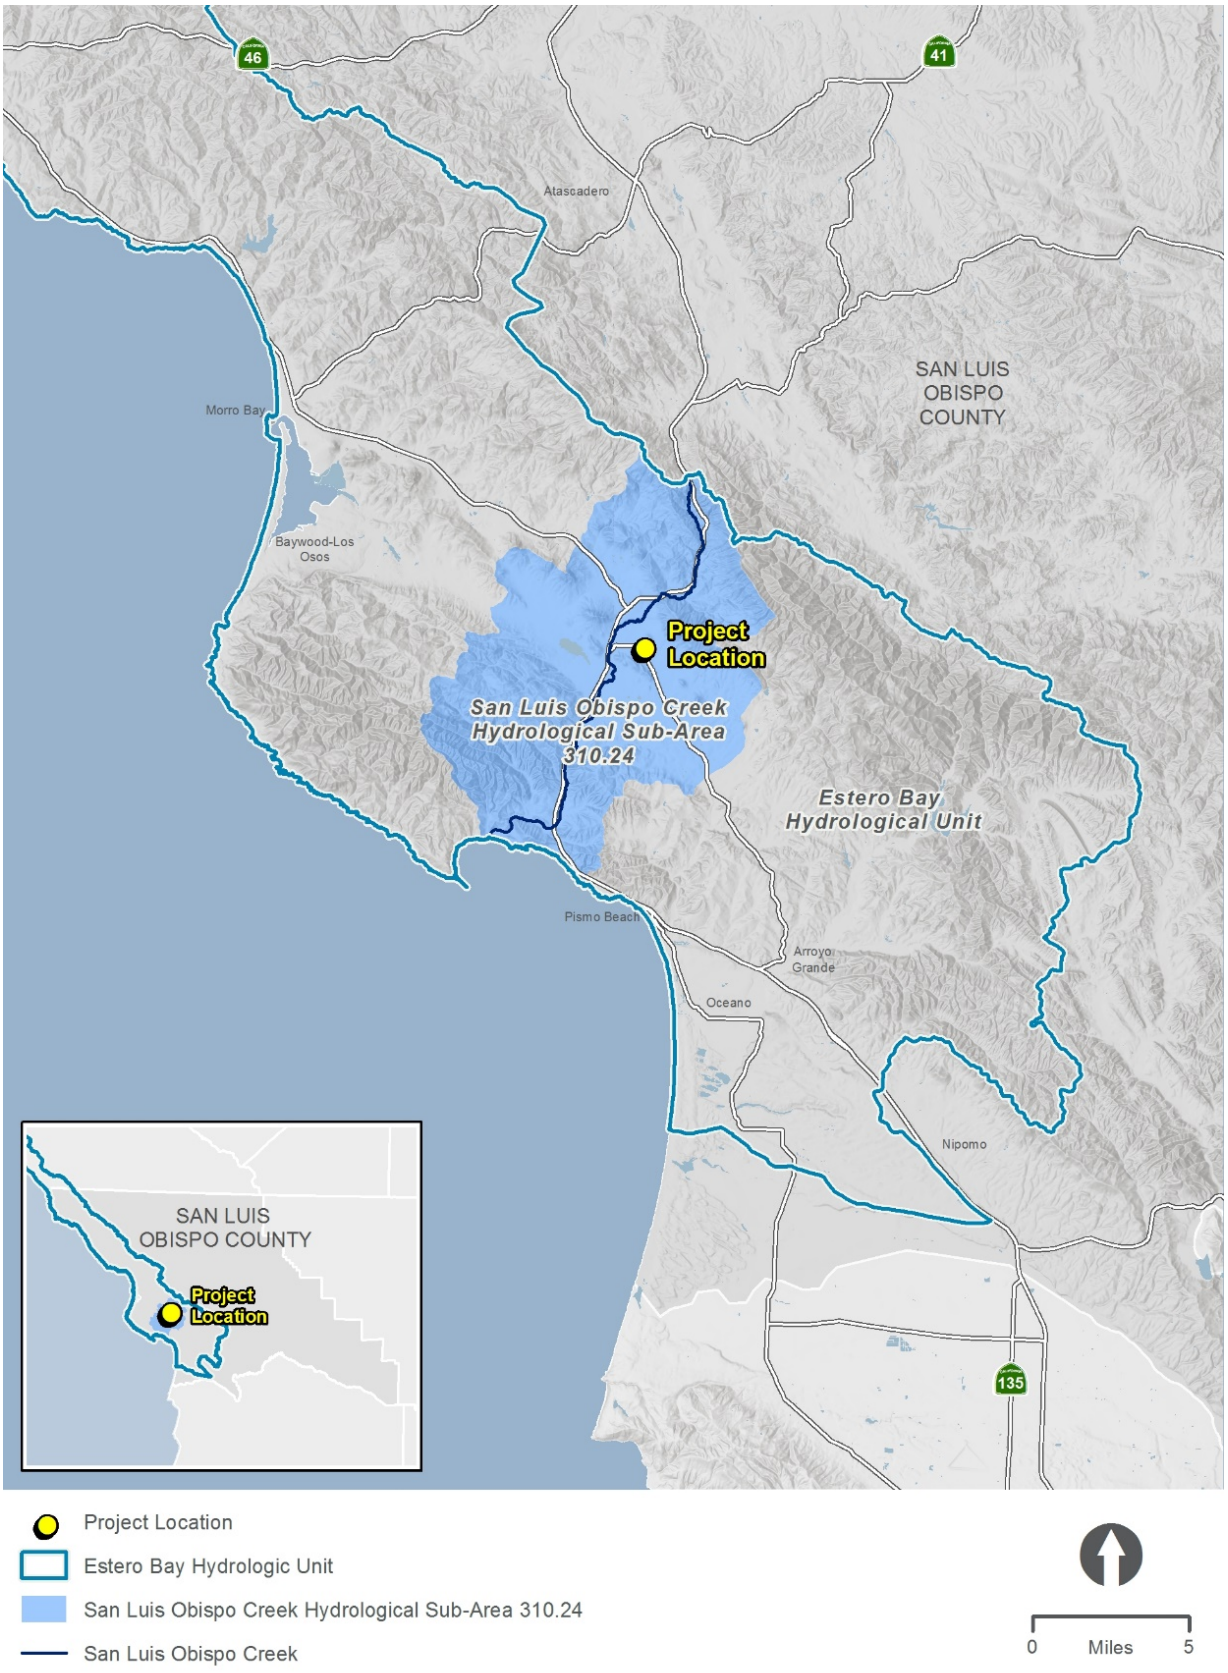
ranging from approximately 83 and 115 feet. The ground surface elevation for East San Luis well is 165 feet with the groundwater elevation ranging from approximately 140 and 150 feet. Additionally, another source is the Groundwater Sustainability Plan which shows groundwater elevations but only for areas outside the project area (County of San Luis Obispo 2021). However, the lack of more proximate well data makes it challenging to confirm the groundwater elevation at the project. For example, the Project preliminary geotechnical design report did not encounter any groundwater during the field investigation. Based on range of depth of field borings, the groundwater table is greater than 50-foot depth (HDR 2021).

Figure 4. Watersheds Based on Watershed Boundary Dataset



This page is intentionally blank.

Figure 5. Watersheds Based on Calwater



This page is intentionally blank.

4.3 Floodplains

According to Federal Emergency Management Agency Flood Insurance Rate Map Panel Number 06079C1069G (San Luis Obispo County, California; last revised November 16, 2012), the Project is in an area determined to be outside the 0.2% annual chance floodplain (Figure 6) or in an area in which flood hazards are undetermined, but possible (in Other Areas category) associated with San Luis Obispo Creek.

The San Luis Obispo Flood Control and Water Conservation District has created zones to provide flood control services for various communities in the county. One of those is the Zone 9 Advisory Committee to provide flood control services for the area encompassing San Luis Obispo Creek and its tributaries. As such, the Project is in Flood Control Zone 9 of the San Luis Obispo Flood Control and Water Conservation District. There is no San Luis Obispo Flood Control and Water Conservation District facility located within the Project limits.

This page is intentionally blank.

Figure 6. Floodplains

This page is intentionally blank.

5 Potential Impact on Water Quality

5.1 Construction (Temporary Impacts)

The total disturbed soil area for the Project is estimated to be 8.0 acres and includes areas for construction, access, and staging. Construction activities associated with the Project have the potential to degrade water quality through the exposure of surface runoff (primarily rainfall) to exposed soils, dust, and other debris, as well as from runoff from construction equipment. The use of oil, grease, and paints associated with construction activities can also degrade water quality if exposed to stormwater runoff.

Since the Project causes a disturbed soil area greater than 1.0 acre, the Project will implement Measure WQ-1 which will require the Project to comply with the NPDES Construction General Permit. Given that the Project is in a high receiving water risk area (red area), the Project will either be Risk Level 2 or 3. This includes preparation and implementation of a SWPPP. The SWPPP would identify temporary BMPs to address the potential temporary impacts to water quality. The temporary BMPs identified in the Project SWPPP may include, but not be limited to, measures such as temporary slope reinforcement and stabilization measures (e.g. hydraulic mulch [bonded fiber mix], temporary cover), linear sediment barriers (e.g. fiber rolls, gravel bag berms, silt fencing), construction site waste management (e.g. street sweeping, concrete washout), wind erosion control, non-stormwater management, material management BMPs, as well as temporary construction entrance and drainage inlet protection.

5.2 Operation Phase (Permanent Impacts)

The proposed Project would increase the impervious surface by 4.4 acres (190,000 square feet) to accommodate Project improvements. This includes 0.4 acres (19,000 square feet) of reconstructed impervious surface. The additional impervious surface areas have the potential to increase typical pollutants generated during the operation of a transportation facility (sediment/turbidity, nutrients, trash, and debris, bacteria and viruses, oxygen demanding substances, organic compounds, oil and grease, pesticides and metals).

The Project would implement post construction BMPs to meet the City of San Luis Obispo's stormwater treatment requirements for new and reconstructed impervious surface. If Low Impact Development-type BMPs are viable, then treatment will be based on water quality volume. If infiltration-type BMPs are not viable, the treatment will be based on water quality flow. Pollutants settle on the impervious surfaces such as oil, grease, brake dust, etc. and are mobilized during a precipitation event and conveyed in the storm runoff. To filter these pollutants from the runoff, Low Impact Development BMPs may be incorporated to treat and filter those pollutants from the runoff before it leaves the Project site thereby minimizing the conveyance and further impairment to the downstream water body. To address this impact, the Project will implement Measure WQ-2 which will require the Project to comply with the NPDES Phase II MS4 Permit.

Similarly, the Project would implement post construction BMPs to meet the IGP stormwater treatment requirements. This may include, but not be limited to, oil-water separators, water quality inlets, drain inlet inserts, etc. These features would apply to operation and maintenance of the Project. During operation and maintenance, it is normal for stormwater associated with industrial activities to discharge to waters of the U.S. During operation and maintenance, certain related activities and materials have the potential to mingle with precipitation which are conveyed in the storm runoff. To mitigate this

situation, certain housekeeping and structural BMPs may be incorporated into the project. By doing so, this will prevent the onsite runoff from discharging polluted runoff from leaving the project thereby minimizing the conveyance and further impairment to the downstream water body. To address this impact, the Project will implement Measure WQ-3 which will require the Project to comply with the NPDES Industrial General Permit.

5.2.1 Groundwater

General groundwater information is available for the regional area but groundwater elevation (or depth to groundwater below ground surface) information specific to the project area is not available from public domain sources. However, groundwater was not evident during field geotechnical investigations and those borings were as deep as 50 feet. Hence, it is assumed the historical high groundwater table is at least this deep. Due to the assumed depth of the high groundwater table, groundwater is not expected to adversely affect construction of the proposed Project and dewatering activities are not anticipated. However, fluctuations of the groundwater level, localized zones of perched water, and an increase in soil moisture should be anticipated during and following the rainy seasons in the area (October 1st through May 1st) or periods of locally intense rainfall or storm water runoff.

5.2.2 Floodplains

According to the Federal Emergency Management Agency Flood Insurance Rate Map, the Project site is located within an area consistent with at least a 500-year floodplain associated with the San Luis Obispo Creek. Consequently, the Project is not anticipated to encroach upon any 100-year floodplains, including the San Luis Obispo Creek floodplain.

6 Avoidance and Minimization Measures

The following avoidance and minimization measures have been identified to minimize impacts to water resources and water quality:

WQ-1 The LOSSAN Rail Corridor Agency will comply with the provisions of the NPDES General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit) (Order No. 2009-0009-DWQ, NPDES No. CAS000002), as amended by Order No. 2010-0014-DWQ and Order No. 2012-0006-DWQ.

WQ-2 The LOSSAN Rail Corridor Agency will comply with the provisions of the NPDES General Permit for Waste Discharge Requirements for Stormwater Discharges from Small MS4s (Order No. 2013-0001-DWQ, NPDES No. CAS000004), otherwise known as the Phase II Permit. Since the City of San Luis Obispo is a permittee of the permit, this includes following the City of San Luis Obispo requirements of the Phase II permit for post construction stormwater quality. This includes complying with the Central Coast Regional Water Quality Control Board Post-Construction Stormwater Management Requirements for Development Projects in the Central Coast Region (Resolution No. R3-2013-0032, July 12, 2013), and the City of San Luis Obispo Stormwater Control Plan for Post Construction Requirements.

WQ-3 The LOSSAN Rail Corridor Agency will comply with the provisions of NPDES General Permit for Storm Water Discharges Associated with Industrial Activities (Order No. 2014-0057-DWQ, NPDES No. CAS000001).

1 Introduction

The LOSSAN Rail Corridor Agency is proposing the relocation and expansion of the existing Pacific Surfliner layover facility located at the northern end of the Los Angeles – San Diego – San Luis Obispo LOSSAN rail corridor in San Luis Obispo, California. The proposed Central Coast Layover Facility would increase overnight layover and storage capacity to support the service goals and objectives outlined for the Pacific Surfliner in both the 2018 California State Rail Plan and the LOSSAN Rail Corridor Agency's Fiscal Year 2019-20 and 2020-21 Business Plan.

1.1 Project Description

The proposed project will construct a maintenance facility identified as the LOSSAN Central Coast Layover Facility (CCLF) that will facilitate the maintenance of equipment at the northern terminus of the LOSSAN rail corridor. It will allow additional passenger trains to be maintained, serviced and stored in San Luis Obispo overnight with no impact to the operations of Union Pacific, allowing a second, more convenient, morning departure from San Luis Obispo, subject to Union Pacific approval of the proposed schedule. It will also provide for the opportunity to store and service additional train sets used for further expansion of the Service.

Funding is currently not available to construct the entire facility at once. Instead, a phased construction approach is intended, constructing an initial portion of the facility which includes the most immediately needed elements, and adding the remaining components as the need arises and additional funding becomes available. Phase 1 intends to meet or exceed the functionality of the existing layover facility and add layover capacity for at least one additional train. Later phases would include the remaining Master Plan components as dictated by operational needs and as allowed by available funding. Initially this would focus on all items identified as essential components of the ultimate facility, followed later by those features that would expand overall capacity of the facility, as well as enhance operations and efficiency, but which are not immediately mandatory. The drainage analysis in this report sizes the backbone storm system for the full build site improvements and provides necessary improvements to accommodate the Phase 1 layout.

The design of the new segment of Class I Bike Trail will feature a monument to the historic Southern Pacific Railroad Roundhouse, where the structure's remnant foundation remains visible. The project's improvements will avoid impacting the roundhouse footing and maintain the foundation as part of the Railroad Historic District.

1.2 Project Location

The project site is located on approximately 13 acres of relatively undeveloped land in the City of San Luis Obispo, California. The City of San Luis Obispo is located along the Central Coast region of California, approximately 190 miles north of Los Angeles (Figure 1-1. Regional Location). The existing Pacific Surfliner layover facility is located directly across from the San Luis Obispo Amtrak Station, located at 1011 Railroad Avenue. The proj

ect site is located approximately 0.3-mile south of the San Luis Obispo Amtrak Station. The project site extends from south of the San Luis Obispo Railroad Museum's parking lot to east of Lawrence Drive. The project site is between the UP Main Tracks and existing commercial and residential development to the west. The focus of this drainage report is from the northern limit of the project site southward towards Francis Street and comprises 10.9 acres. Analysis of the project site area south of Francis Street will occur in future design phases and will not impact the design of the backbone storm system.

Figure 1-1. Regional Location

As shown on Figure 1-2, the project site is located entirely within the City of San Luis Obispo's Railroad Historic District (District). The District boundary covers approximately one-half square mile and extends along the railroad right-of-way (ROW) for about 1.7 miles in roughly a north-south axis. The District includes the original railroad yard, plus residential and commercial-zoned property on the west side of the railroad ROW (City of San Luis Obispo Community Development Department 1998).

Figure 1-2. Project Site

2 Methodology

2.1 Hydrology

The project site utilizes the Hydrology criteria established by the City of San Luis Obispo's Drainage Design Manual (DDM) titled "San Luis Obispo Creek, Waterway Management Plan, Volume III - Drainage Design Manual", dated February 2003. The manual indicates that for drainage areas less than 40 hectares (100 acres), the rational method criteria established in manual is acceptable for determining peak discharges. For this drainage report, copies of the hydrology calculations have been provided in Appendix B.

As depicted in the DDM, the Rational Method equation is as follows:

$$Q = C * I * Ca * A/Kc$$

Where:

Q =	Peak rate of runoff in (m^3/s) and cfs
C =	Runoff Coefficient, as depicted in Table 2-1 below
I =	Average intensity of rainfall for the time of concentration (Tc) for a selected design storm
Ca =	Antecedent Moisture Factor
A =	Drainage Area in hectares
Kc =	Unit conversion factor equal to 360, (1 in English units)

Runoff Coefficient ('C' value): To determine a runoff coefficient "C" at each subarea with varying land-uses. Table 2-1 below provides the C values are utilized for various landuse types:

Table 2-1. Project Runoff Coefficient Values

Landuse Description	C Value
Unimproved	0.45
Dirt Road / Ballasted Section	0.35
Impervious Asphalt and/or Concrete	0.87

Where the "C" value for the Unimproved and Impervious Landuses were obtained from the DDM Table 4-1 Runoff Coefficients. The "C" value for the Dirt Road / Ballasted Section was based upon the results indicated on AREMA Table 1-3-2 Urban Area Runoff Coefficient Values for Railroad Yards.

A composite weighted C value is to be calculated using the following equation:

$$Composite\ C\ value = \sum \frac{C1(Area\ C1)}{Total\ Area} + \frac{C2(Area\ C2)}{Total\ Area} + \ldots$$

Antecedent Moisture Value ('Ca' value): As indicated in the DDM, the antecedent moisture value factor (Ca) is an attempt to account for changes in soil infiltration capacity and creek base flow rates that occur during very wet periods. Table 2-2 below provides the Ca value for the various frequency events.

Table 2-2. SLO – Antecedent Moisture (Ca) Factors

Recurrence Interval (years)	Antecedent Moisture Factor (Ca)
2 to 10	1.0
25	1.1
50	1.2
100	1.25

Time of Concentration: The time of concentration is defined in the DDM as the time required for runoff to flow from the most hydraulically remote part of the drainage area to the point under consideration. The DDM identifies three types of flows and provides a procedure for determining the travel time within each type of regime. The three types of flows are Overland Flow, Shallow Concentrated Flow and Channel or Pipe Flow. See the following descriptions below and how to calculate the time of concentration in each regime.

Overland Flow: Overland flow is considered shallow flow (flow less than 1 inch deep) over a planar surface. This flow is typically less than 300 feet in length prior to transitioning into Shallow Concentrated Flow. The DDM provides an Overland Flow Chart to be used in determining the time of concentration within this regime. Copies of this chart are attached in Appendix B for existing and proposed hydrology calculations.

Shallow Concentrated Flow: This regime occurs when overland flow converges, forming gullies and swales. It also occurs in man-made ditches and curb gutters. The equation for Shallow Concentrated Flow is as follows:

$$V = Ku * k * Sp^{0.5}$$

Where:

V =	Velocity (m/s)	k =	Interception Coefficient
Ku =	1.0 (3.28 in Imperial Units	Sp =	Slope (Percent)

Table 2-3 below provides the Interception Coefficient values obtained from the DDM.

Table 2-3. SLO – Interception Coefficient Values

Flow Regime	'k' value
Grassed Waterway	0.457
Unpaved	0.491
Paved Area; Small Upland Gullies	0.619

Once the Velocity is calculated for this flow regime, the travel time (Tt) can be calculated as follows:

$$Tt\ (minutes) = \frac{L}{60 * V}$$

Where:

Tt =	Travel Time (minutes)
L =	Length of Shallow Concentrated Flow
V =	Velocity (m/s)

Channel / Pipe Flow: The DDM utilizes the Manning's Equation for calculating channel flow. The manual allows for use of the initial bankfull Tc estimate to calculate the channel velocity.

Additional calculations should be provided as channel / pipe conditions change. The Manning's equation is as follows:

$$V = \frac{1R^{\frac{2}{3}} * S^{\frac{1}{2}}}{n}$$

Where:

V =	Velocity (m/s)
R =	Hydraulic Radius (m); r = A/Pw)
A =	Cross Sectional Flow Area (m^2)
S =	Slope of the grade line (Channel Slope m/m)
n =	Manning's roughness coefficient, for HDPE pipe use n = 0.013

The time of concentration equates the sum of various travel times in each flow regime within the drainage area. The minimum time of concentration shall be 10 minutes.

Intensity (I): Once the time of concentration has been calculated for a drainage reach, it is possible to calculate the intensity value by utilizing the Rainfall Intensity data provided in the DDM. The correct table is determined by identifying the Average Annual Precipitation based on Figure 2-1. For our project, the Average Annual Precipitation is P=593 mm, which coincides with using Table 4-6 of the DDM, see Table 2-4 below for the Rainfall Intensity data. The intensity values within each storm drain is calculated by interpolating between the data pairs for each duration.

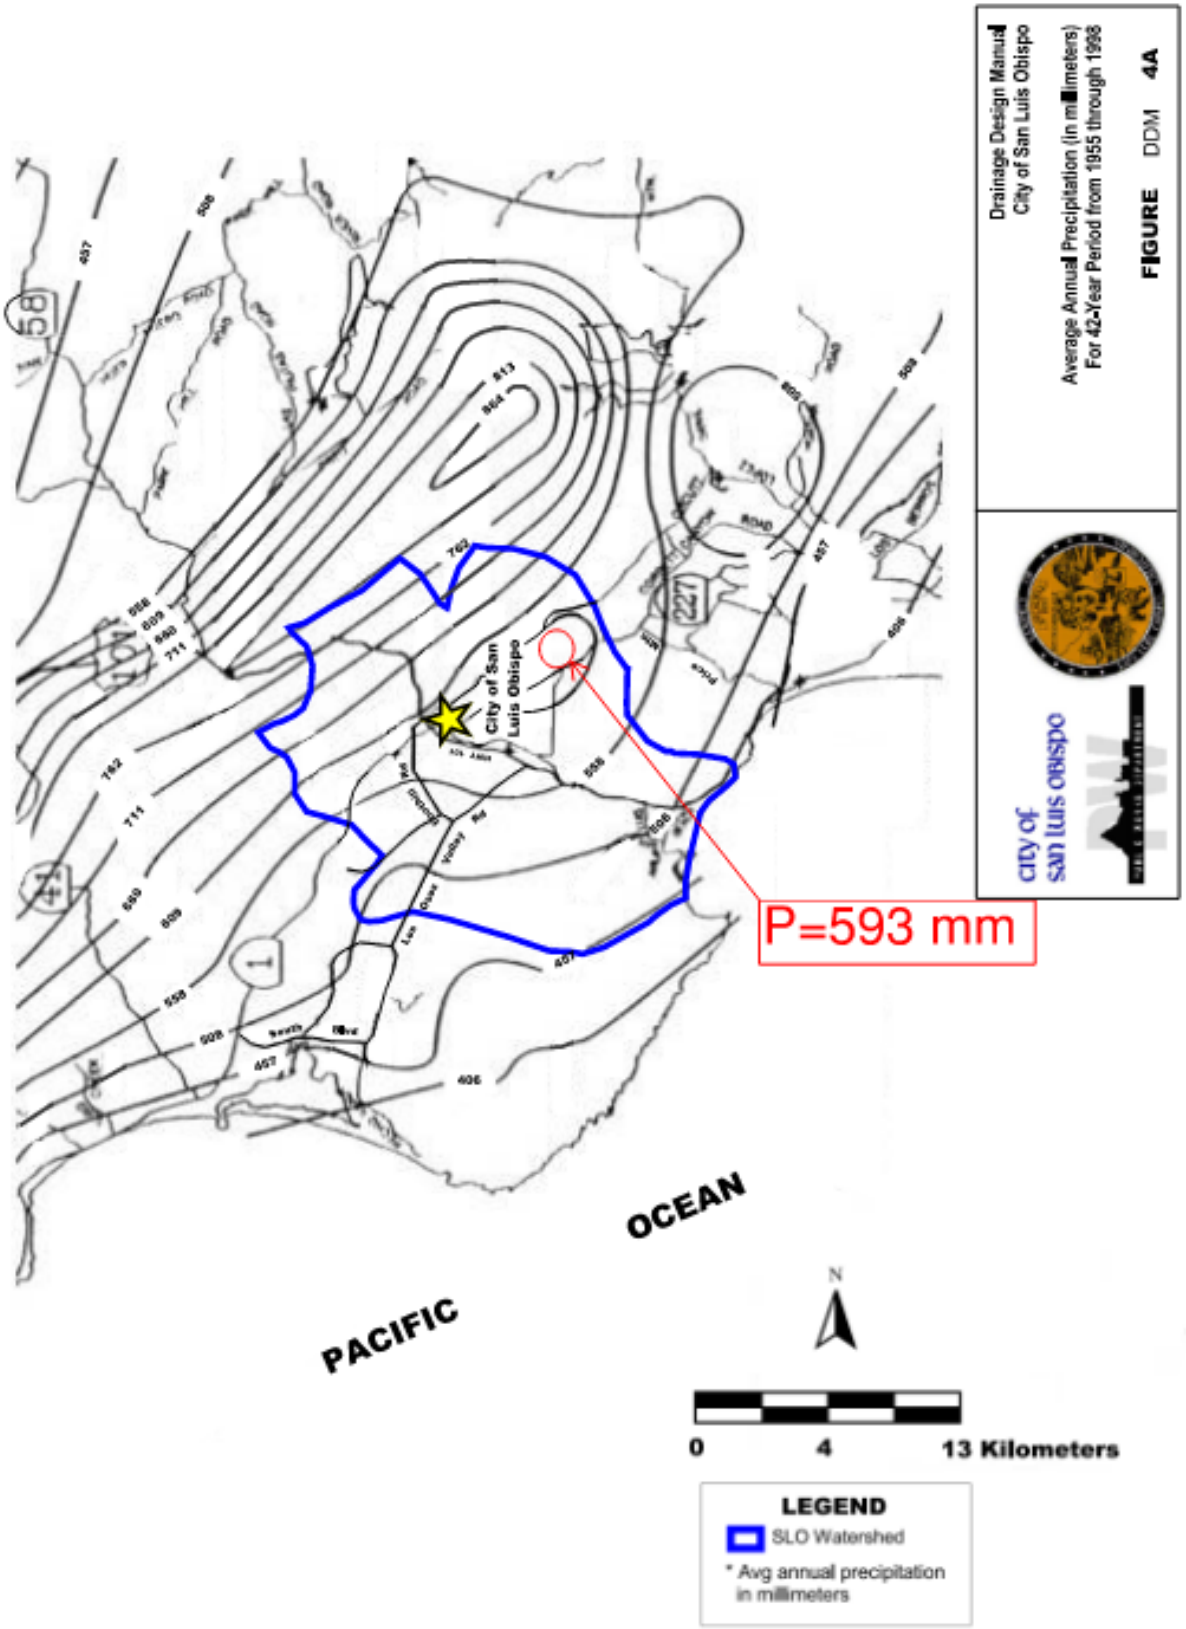
Table 2-4. SLO – Rainfall Intensity Data, Areas with 550mm to 700 mm Annual Rainfall

Recurrence Interval (Years)	Duration		
	10 min (mm/hr)	15 Min (mm/hr)	30 Min (mm/hr)
2	53	46	30
10	91	76	53
25	102	89	61
100	127	109	74

2.2 Hydraulics

For the preliminary design, the project will utilize normal depth calculations for sizing of the backbone storm drain, Line A, B, C and E. Copies of the Normal Depth Calculations are provided in Appendix C.

Figure 2-1. Average Annual Precipitation for 42 Year Period



3 Hydrology

3.1 Existing Hydrology

3.1.1 Site Description

The project study area is located within the 53,271-acre San Luis Obispo Creek watershed (83.2 square mile), which is located within the Estero Bay Hydrologic Unit (Hydrologic Unit 310). The Estero Bay Hydrologic Unit is divided into 19 subareas including the San Luis Obispo Creek (Hydrologic Unit 310.24), which is where the project study area is located (SLO Watershed Project 2020; Central Coast RWQCB 2019). Sheet flows within the project study area and surrounding vicinity generally drain to San Luis Obispo Creek. The natural bottom meandering San Luis Creek is largely confined due to urban development and agriculture before it outlets to the Pacific Ocean in Avila Beach, approximately 11 miles downstream of the project study area.

The project site is approximately 13 acres and is located within the City of San Luis Obispo, bounded by High Street to the north and McMillan Avenue to the south. The hydrologic analysis prepared for this report limits the extents to the portion of the project site north of Francis Avenue, approximately 10.9 acres. Future analysis for the area south of Francis Avenue is to be incorporated into this report during final design. The analyzed portion of the project site has three existing tracks located along the eastern portion of the right of way, 2 main tracks and one siding track. These tracks represent the eastern boundary of the project site and are not considered a part of this project. The western boundary is the railroad right of way and the adjacent commercial and residential developments. Between the railroad main tracks and the western boundary, the existing site is mostly vacant, however remnants of building footings/slabs and retaining walls remain from what was previously a rail maintenance facility constructed in the 1920's. Along the south western rail right of way, there are four existing utility buildings located south of Woodbridge Street which are in use today. These facilities are fenced off and are to be protected in place.

3.1.2 Floodplain

The DDM has identified that the middle one third portion of the SLO Creek watershed has been substantially built-out and that the City has created an Urban Reserve Boundary to encourage in-fill development and prevent urban sprawl. A review of DDM Figure 3-1 - Special Floodplain Management Zones (see Figure 3-1), indicates that the project is located within the Urban Reserve Boundary. The primary policy objective for this area is to minimize flood damage to existing and new buildings, and minimize additional obstructions to flood water passage. Two sets of standards and criteria have been established for these areas, one for "urban-in-fill development" within the existing urban area and one for "non-in-fill development" in large vacant parcel areas at the edges of the existing urban area. As the project is considered "urban in-fill development" within the existing urban area and is outside of the FEMA designated 100-year floodplain as depicted in DDM Figure 3-2 (see Figure 3-2), the Floodplain Management Zone criteria established in DDM Section 3.5 does not apply.

Figure 3-1. Special Floodplain Management Zones

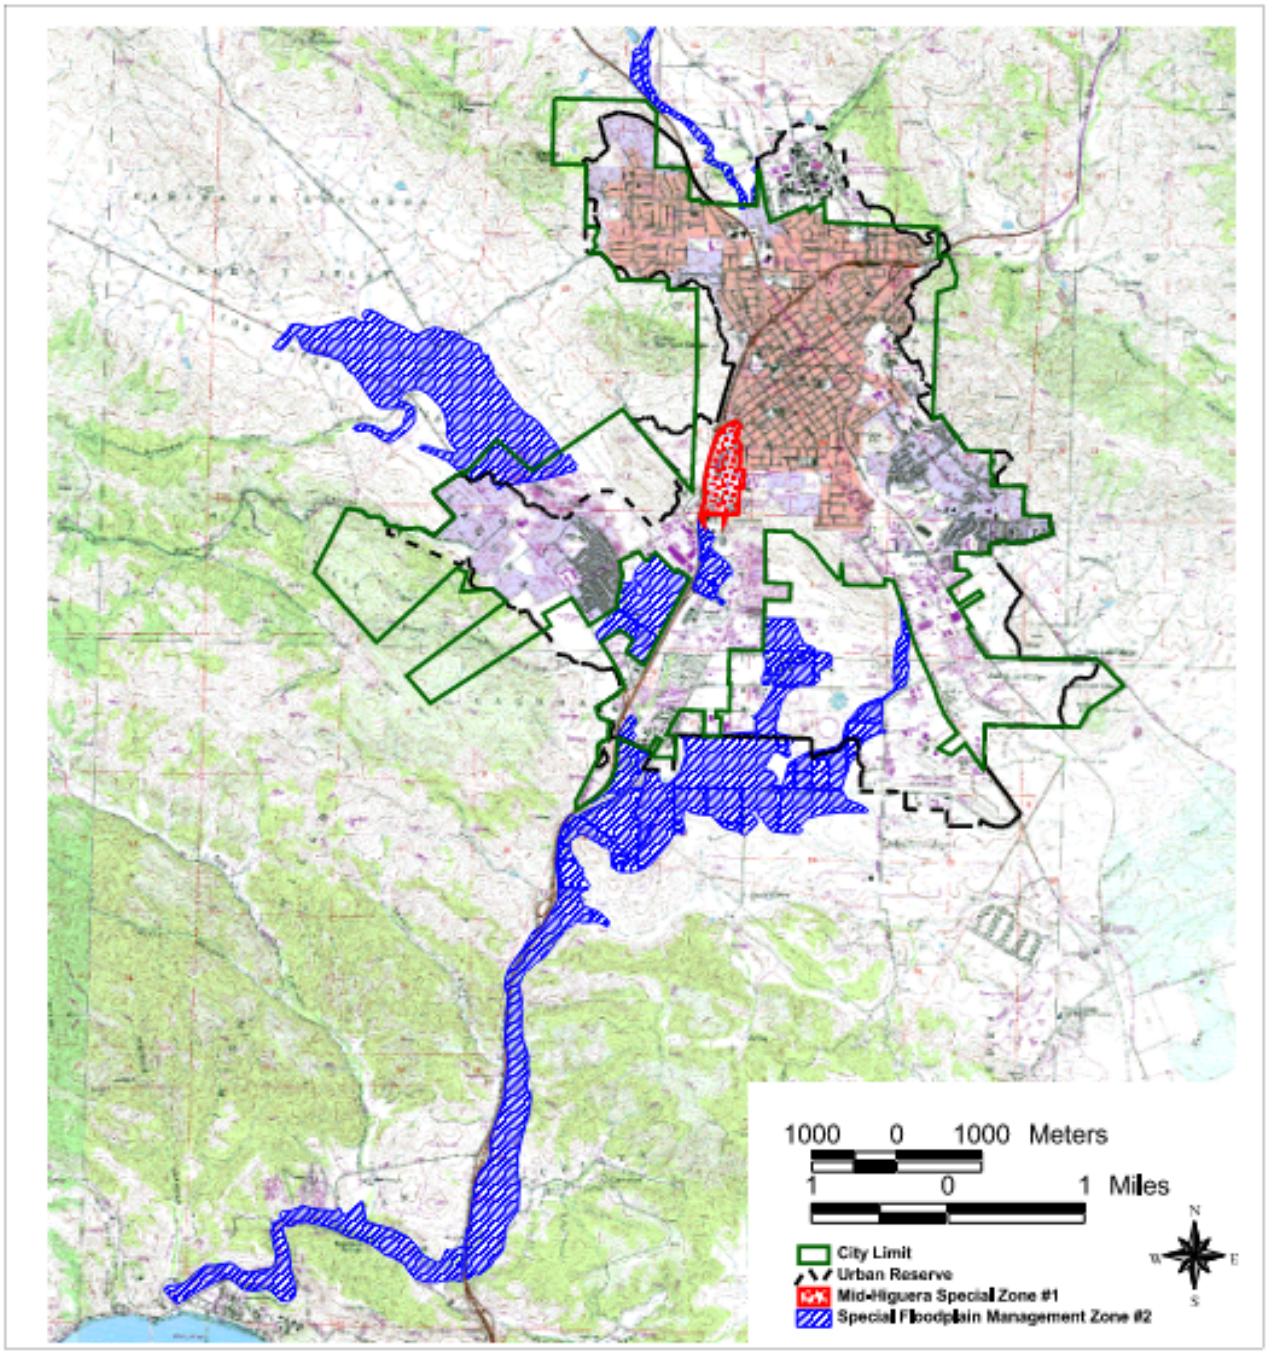


Figure 3-2. 100-Year Floodplain

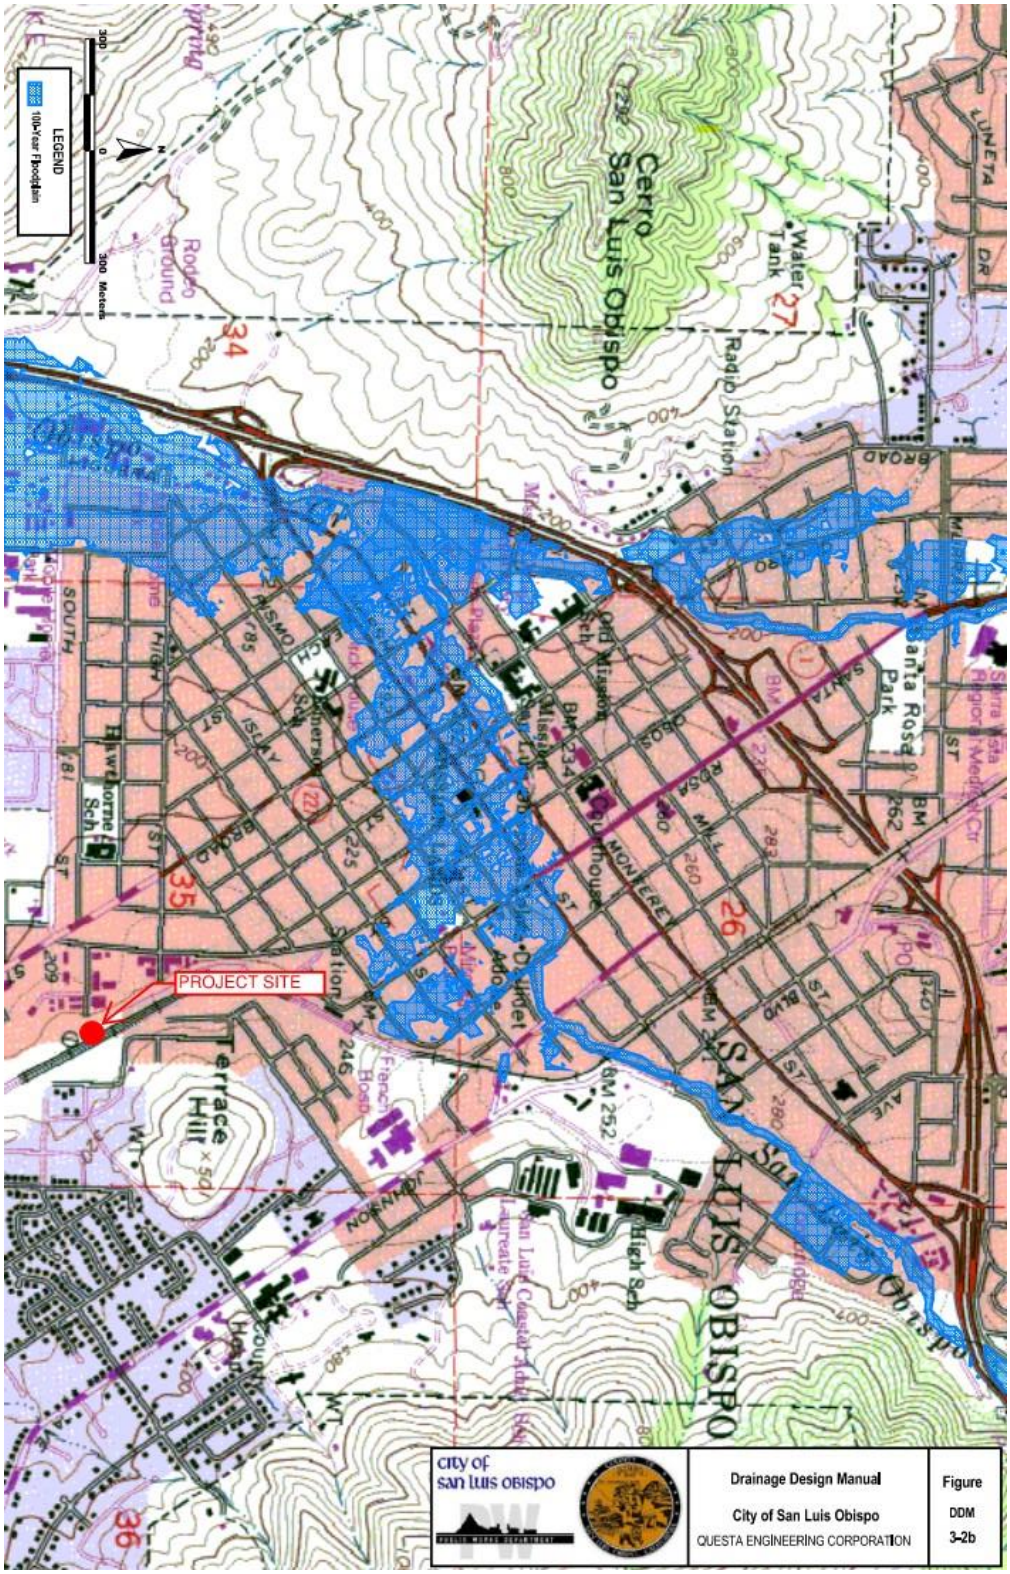

3.1.3 Adjacent Land Uses

To the immediate east is an improved asphalt bike trail known as the “Railroad Safety Trail” that serves as a buffer between the rail right of way and the residential neighborhood located east of the bike trail. All runoff generated from the residential area and bike trail area is collected via drainage improvements and conveyed towards one of two existing storm drain systems, which traverse the project site.

The northernmost storm drain, identified as Existing Line 1, conveys runoff from east to west and discharges the runoff onto High Street via a curb outlet located midblock on the south side. A review of the City’s storm drain grid maps indicate the drain is city owned with the portion crossing the rail right of way being an 18” Vitrified Clay Pipe (VCP) and the western portion located under High Street being an 18” concrete pipe. Record drawings for the portion under High Street shows the storm drain was constructed in 1943. Record drawings were not available for the 18” VCP storm drain, however it can be assumed that this storm drain existed prior to construction of the concrete storm drain.

The southernmost storm drain crossing, identified as Existing Line 2, conveys the runoff from east to west and is directly connected to the existing storm drain at Alphonso Street based on field observations. A review of the City’s grid map indicates this is a private 24 inch diameter main with the portion under the rail right of way being cast iron. Invert elevations at the upstream and downstream ends were provided by city staff as part of a records request and were utilized in determining the location and elevation of the storm drain, however the invert elevations could not be verified by record drawings. Additional coordination efforts will include continued coordination with city staff to obtain all available record drawing for the portion of storm drain connecting to the storm drain on Alphonso Street. We are also planning to obtain supplemental field survey of the upstream and downstream catch basins to confirm the storm drain locations prior to completion of the preliminary design.

To the west of the project site is a light industrial/commercial area. This area is located downstream of the project site and does not contribute to the onsite drainage.

3.1.4 Soils

Five different soil series are mapped within the project site using the U.S. Department of Agriculture’s Natural Resources Conservation Service soil mapping website. Figure 3-3 provides the plan view image of the project site and the location of each soil series classification. Table 3-1. SLO – Antecedent Moisture (Ca) Factors provides a summary description for each soil series. The soils located within the project site are considered moderately to well drained with little to no clays, adobe or rockland. The project hydrology calculations will assume a soil group classification “C” for determination of the Run-off Coefficients.

Table 3-1. SLO – Antecedent Moisture (Ca) Factors

Series name	Series Description
Concepcion series	The Concepcion series consists of deep, well-drained soils. They are formed in weakly consolidated stratified alluvium or wind-deposited sandy material on soil terraces within 1 to 2 miles of the Pacific Ocean. Concepcion soils have slopes of 0 to 50 percent. The mean annual precipitation is about 17 inches, and the annual temperature is about 60 degrees Fahrenheit. The soil occurs in elevations between 40 and 200 feet.
Cropley series	The Cropley series consists of very deep, moderately and well-drained soils. They are formed in alluvium from mixed rock sources. Cropley soils have slopes of 0 to 15 percent. The mean annual precipitation is about 16 inches, and the mean annual temperature is 60 degrees Fahrenheit. The soil occurs in elevations between 10 and 2,100 feet.
Diablo series	The Diablo series is a member of the fine, smectitic, thermic family of Aridic Haploxererts and is a well-drained soil. They are formed in residuum, weather from shale, sandstone, and consolidated sediments with minor areas of tuffaceous material. Diablo soils have slopes of 5 to 50 percent. The mean annual precipitation is about 10 to 35 inches, and the mean annual temperature is 57 to 62 degrees Fahrenheit. The soil occurs in elevations between 25 and 3,000 feet.
Lodo series	The Lodo series consists shallow, somewhat excessively drained soils. They are formed in weathered material from hard shale and fine-grained sandstone. Lodo soils are on uplands and have slopes of 5 to 75 percent. The mean annual precipitation is about 20 inches, and the mean annual temperature is 62 degrees Fahrenheit. The soil occurs in elevations between 300 and 3,400 feet.
Los Osos series	The Los Osos series consists of moderately deep, well-drained soils. They are formed in weathered material from sandstone and shale. Los Osos soils are on uplands and have slopes of 5 to 75 percent. The mean annual precipitation is about 25 inches, and the mean annual temperature is 60 degrees Fahrenheit. The soil occurs in elevations between 100 and 3,500 feet.

Figure 3-3. United States Department of Agriculture Soils

3.1.5 Existing Topography and Drainage Areas

The site topography was generated via aerial imagery flown in September 2019. The topography shows the area between High Street and Roundhouse Street drains towards the western rail right of way, where runoff drains into the adjacent properties or runs along an adjacent retaining wall southward towards Roundhouse Street. The central portion of the site, between Roundhouse Street and the extension of Woodbridge Avenue generally drain from east to west, draining onto the adjacent properties. The southern portion of the project site primarily drains from southeast to northwest towards an existing parking lot located west of the rail right of way. It is assumed that the runoff south of Francis Avenue drains towards Francis Avenue or the existing culvert near McMillan Avenue, this is to be confirmed during final design.

The project site is divided into the following drainage areas as shown in the Existing Hydrology Exhibits provided in Appendix A and described below from north to south. Table 3-2. Existing Condition Runoff Flow provides the existing condition runoff flow rates for the 2-year, 10-year, 25-year and 100-year design storm.

Drainage Area 100 – This drainage area is located between High Street to the north and the adjacent offsite property identified as “Emily Yard” on the south and west. The drainage area is 0.9 Acres and is mostly barren with little vegetation. All runoff sheet flows from east to west where it is collected and conveyed into the ”Emily Yard” property. The flow continues along concrete gutter improvements constructed by the adjacent property towards riprap improvements at the end of the curb and gutter. The flow then combines with the adjacent property runoff and is conveyed westward along a concrete ribbon gutter towards a grate inlet where it enters the city storm drain system. The 100-year storm flow exiting the project site is 2.4 cubic feet per second (cfs).

Drainage Area 200 – This drainage area is bounded by Drainage Area 100 to the north and the project access from Roundhouse Street to the south. The drainage area is 1.8 Acres and is mostly barren with very little vegetation, where it is primarily located along the western rail right of way and near the project entrance at Roundhouse Street. The existing on-site runoff is collected along unimproved drainage swales located adjacent to the western rail right of way. The runoff is conveyed southward towards Roundhouse Street where the runoff is discharged onto the existing curb and gutter. The 100-year storm flow is 4.6 (cfs)

Drainage Area 300 – This drainage area is bounded by Drainage Area 200 and the project site access from Roundhouse Street to the north and the offsite retaining wall. This drainage area is primarily barren with sparse vegetation and contains the concrete remnants of a roundhouse structure from the early 1900’s. The runoff within the drainage area sheet flows east to west along unlined drainage swales and towards concrete lined ditches located west of the rail right of way and constructed by the adjacent properties. The runoff is conveyed into their catch basins and storm system. The drainage area is subdivided into the following drainage areas to define the flow entering each of the existing catch basin improvements located offsite. Drainage Area 300 is divided into Drainage Areas 300A, 300B and 300C and are described below.

Runoff from DA 300A is collected along the concrete ditch and conveyed northwards towards an inlet riser at the end of masonry retaining wall. The runoff discharges onto the adjacent parking lot and combines with the adjacent property runoff and sheet flows towards a grated inlet catch basin located within the driveway aisle. The drainage area is 0.6 Acres and generates 1.6 cfs.

Runoff from DA 300B is collected along the existing concrete ditch and conveyed southward towards a grated catch basin located within the adjacent property. The existing catch basin is connected to the grated catch basin within the driveway aisle (see DA 100) and drains towards the public storm drain system on Emily Street. The drainage area is 0.6 Acres and generates 1.6 cfs.

Runoff from DA 300C is collected along the existing concrete ditch and conveyed towards existing grated catch basins interspersed along the drainage ditch. The ditch and catch basin improvement are located within the adjacent private property. The existing catch basins are connected to the drainage system located within the driveway aisle and drain towards the public storm drain system on Emily Street. The drainage area is 1.1 Acres and generates 3.3 cfs.

Drainage Area 400 – This drainage area is bounded by the extension of South Street to the north and existing vegetated bioswale to the south. The drainage area is 2.2 Acres and consists of mostly bare soil with various building foundations along the western side. The runoff within the drainage area sheet flows east to west, towards a concrete lined drainage ditch located within the adjacent private property. The drainage ditch conveys the runoff southward towards the existing vegetated offsite swale that drains westerly towards the inlet riser near the intersection of Emily and Alphonso Streets. The 100-year storm flow is 6.8 cfs.

Drainage Area 500A – This drainage area is bounded by the extension of the vegetated bioswale to the north and the limits of the existing parking lot improvements to the south. The drainage area is 1.7 Acres and consists of mostly bare soil with a building foundation located in the northwest quadrant of the drainage area. The runoff within the drainage area sheet flows from east to west via unimproved swales which convey the flow towards a common low point along the western rail right of way. The adjacent private property, an improved parking lot, has constructed riprap improvements which convey the runoff directly onto the parking lot surface where the runoff sheet flows towards its western side and into the inlet improvement near the parking lot entrance. The total runoff generated from the Drainage Area is 5.0 cfs.

Drainage Area 500B – This drainage area is bounded by the southern limit of Drainage Area 500A to the north and the extension of the project entrance from Francis Street to the south. The drainage area is 2.1 Acres and consists primarily of barren soil with some vegetation and four fenced-off areas with building improvements. The runoff within the drainage area sheet flows towards an unlined and unimproved drainage swale located just east of the building improvements. The unimproved swale drains from south to north and discharging into the improved parking lot described in Drainage Area 500A. Similar to what is described in Drainage Area 500A, the adjacent parking lot has constructed riprap improvements to collect and convey the project site runoff onto the parking lot surface and conveyed along a concrete gutter improvement towards the existing inlet improvement located near the entrance. The 100-year storm flow is 5.2 cfs. See Appendix A for Existing Drainage Exhibit.

Table 3-2. Existing Condition Runoff Flow

Drainage Area	2 Year Storm (cfs)	10 Year Storm (cfs)	25 Year Storm (cfs)	100 year Storm (cfs)
100	0.8	1.4	1.7	2.4
200	1.6	2.6	3.3	4.6
300A	0.5	.9	1.1	1.6
300B	0.6	1.0	1.2	1.7
300C	1.1	1.9	2.3	3.3
400	2.3	3.9	4.8	6.8
500A	1.7	2.9	3.5	5.0
500B	1.8	2.9	3.7	5.2

3.2 Proposed Drainage

The proposed project site grading is set to have the northern and southern portions of the project site higher than the depressed “bowl” area in the middle which is consistent with the layout of rail maintenance yards to prevent accidental rolling away of rail vehicles. Exhibits for the proposed condition hydrology, provided in Appendix A, depict that proposed Drainage Areas DA200, DA300 and DA500 are located along the periphery of the project site and discharge the runoff into the adjacent properties and public roadways, consistent with the existing conditions hydrology. Drainage Areas DA100 and DA400 includes the portion of the project site whose runoff is collected within proposed storm drain improvements. The runoff is conveyed towards an underground storage system and discharged into Existing Line 2 at a point near the western rail right of way. The following is a description of the proposed drainage areas beginning at the north end and extending southward. Also included is Table 3-3 summarizing the runoff from each drainage area

Drainage Area 100 – The drainage area is located along the northwestern portion of the project site and is bounded by High Street to the north and the rail right of way boundary to the west. To the east, the drainage area is bounded by the ‘INSP’ Track. The drainage area includes a portion of the asphalt bike trail and maintenance roadway with some vegetation located in between both paved surfaces.

The drainage area is 1.6 Acres (0.64 hectares). All runoff sheet flows from north to south and is collected by storm drain improvement at or near the driveway extension from Roundhouse Street. The 100-year storm flow is 6.2 cfs (0.17 m^3/s). The proposed design eliminates all project site runoff draining onto the adjacent property.

Drainage Area 200 – The drainage area is located just south of Drainage Area 100 and includes the remaining portion of the asphalt bike trail adjacent to Roundhouse Street, the maintenance

roadway west of DA100 and the biketrail and park area located south of Roundhouse Street. The drainage area is 0.32 Acres (0.13 hectares). The runoff is collected along the access road and bike trail curb improvements and conveyed towards the existing Roundhouse Street surface improvements. The 100-year storm flow is 1.1 cfs (0.03 m^3/s) and represents a 3.5 cfs reduction in runoff exiting the project site when compared to the existing condition.

Drainage Area 300 – The drainage area is bounded by the proposed asphalt bike trail improvements to the east and north and the adjacent developed properties to the west and south for the proposed condition. Runoff from DA 300 is collected along the existing concrete ditch improvements constructed by the adjacent private properties and discharged into the private storm system described in the existing condition analysis, see DA 300A and 300B. The drainage area is 0.3 Acres (0.11 hectares) and includes the landscaped embankments west of the bike trail. The 100-year storm flow is 0.8 cfs which is a significant reduction from the existing condition

Drainage Area 400 – This drainage area includes the portion of the proposed project site that is collected within the proposed storm drain and underdrain improvements for Phase I and the future track improvements. The drainage area includes the proposed maintenance road and asphalt bike trail improvements south of the high point described in DA300 and all future building sites. The Drainage Area storm drain is divided into three storm drain backbone systems, Lines A, B and C. The Line E storm drain collects all runoff from the various systems and conveys it to the underground storage system and Line F conveys the flow from the underground storage system to Existing Line 2, the 24” storm drain crossing the project site. The descriptions below provide information for each Drainage Area.

Drainage Area 400A – This drainage area is comprised of the area graded to drain into the catch basin at Sta 22+24.62~70.41’ RT as well as the ballasted portion of the STR1 track from STA 18+90 to STA 22+32. All runoff from this drainage area is discharged into Line A storm drain and conveyed westward towards the underground storage system. The full-build alternative constructs the remaining storage tracks and the future access road in the area graded to drain towards the catch basin described above. The percent impervious for the full build condition is used in preparing the hydrology calculations. The drainage area is 0.90 Acres (0.65 hectares). The runoff entering the storm drain 4.0 cfs (0.16 m^3/s).

Drainage Area 400B – This drainage area includes the ballasted portion of the STR1 track from the underdrain high point at STA 24+62 northward to the point of connection to the Line A storm drain. It also includes the portion of the track inspection pit from STA 22+32 southwards to STA 26+17 and includes the access path east of the tracks. There are no future modification in this area. The drainage area is 0.51 Acres (0.21 hectares). The runoff entering the storm drain from the combined underdrain systems is 2.5 cfs (0.07 m^3/s).

Drainage Area 400C – This drainage area is located south of Drainage Area 400A and west of the existing freight tracks. This drainage area includes the area graded to drain into the catch basin located at STA 27+06.39~64.32' LT and the portion of the ‘STR1’ extending from STA 24+62 southwards to underdrain point of connection to the Line C storm drain. The full-build alternative constructs tracks and a future access road in the area graded to drain towards the catch basin described above. The percent impervious for the full build condition is used in

preparing the hydrology calculations. The drainage area is 0.68 Acres (0.28 hectares). The 100-year storm flow is 2.2 cfs (0.06 m^3/s).

Drainage Area 400D – This drainage area begins at the southern end of the Phase I track improvements southward to Francis Avenue. The final configuration includes the southward extension of all tracks and maintenance roadways and construction of cleaning shelters and trash and recycling storage facilities. In Phase I, this area will remain mostly vacant with only a portion of the maintenance roadway constructed up to STA 28+48. This report utilizes the percent impervious calculation from the proposed full build condition in the hydrology calculations to appropriately size the curb inlet located at STA 26+18.85 ~ 134.81' RT and the Line C-4 storm drain. The runoff is ultimately discharged into Line C and conveyed towards the proposed underground storage system. The drainage area is 1.8 Acres (0.75 hectares) and the 100-year storm runoff is 5.2 cfs (0.14 m^3/s).

Drainage Area 400E – This drainage is west of DA 400B and DA 400C and includes the vacant area graded to drain towards the inlet located at STA 25+07.80 ~ 75.11' RT. The full build alternative includes construction of future building improvements and additional tracks within the vacant area. The percent impervious for the full build condition is used in preparing the hydrology calculations. The drainage area is 1.1 Acres (0.43 hectares). The runoff entering the storm drain from the combined underdrain systems is 5.2 cfs (0.15 m^3/s).

Drainage Area 400F – This drainage area is comprised of the asphalt bike trail from the high point at STA 21+17 southward towards the catch basin at STA 25+07.89. There are no modifications between Phase I and the final configuration. The drainage area entering the catch basin is 0.21 Acres (0.08 hectares) and the 100-year storm flow is 1.0 cfs (0.03 m^3/s).

Drainage Area 400G - This drainage area mostly comprises the asphalt bike trail from the high point at STA 17+60 northward towards the catch basin at STA 17+60.50. There are no assumed modifications between Phase I and the final configuration. The drainage area entering the catch basin is 0.30 Acres (0.12 hectares) and the 100-year storm flow is 1.2 cfs (0.03 m^3/s).

Drainage Area 400H – This drainage area is bounded to the north by the site boundary, to the east by the existing freight tracks and to the west by the 'INSP' track alignment. Runoff from the drainage area is graded to drain towards the catch basin at STA 18+85.56~70.41' LT or collected in the underdrains paralleling the 'INSP' and 'STR1' tracks and discharged into the Line B-1 storm drain. The percent impervious for the full build condition is used in preparing the hydrology calculations. The drainage area is 2.30 Acres (0.77 hectares). The runoff entering Line B-1 is 3.9 cfs (0.11 m^3/s).

Drainage Area 400I – This drainage area is located north drainage areas DA 400B and DA 400E and includes a portion of the 'STR1' and 'INSP' tracks between STA 18+98 and STA 22+32, as well as the area graded to drain towards the catch basin located at STA 20+77.62 ~ 44.17' RT. The runoff from this drainage area is conveyed into the Line B-2 storm drain. The percent impervious for the full build condition is used in preparing the hydrology calculations. The full build alternative includes construction of future building improvements and additional tracks within

the vacant area. The drainage area is 0.80 Acres (0.32 hectares). The 100-year storm flow is 3.1 cfs (0.09 m^3/s).

Drainage Area 400J - This drainage is west of DA 400I and consists primarily of the maintenance roadway from the high point at STA 18+27 southwards to the proposed curb inlet at STA 22+28.82 ~ 113.50' RT. There are no future improvements in this area. The drainage area is 0.47 Acres (0.19 hectares). The runoff entering the storm drain from the combined underdrain systems is 2.6 cfs (0.07 m^3/s).

Drainage Area 500 – This drainage area includes that portion of the maintenance access roadway as well as that portion of the runoff from the existing warehouse facilities located along the southern portion of the project site that drain towards the existing adjacent parking lot. There are no future improvements proposed within this drainage area. The drainage area is 0.21 Acres (0.09 hectares). The runoff entering the storm drain from the combined underdrain systems is 0.8 cfs (0.02 m^3/s).

Table 3-3. Proposed Condition Runoff Flow

Drainage Area	2 Year Storm (cfs)	10 Year Storm (cfs)	25 Year Storm (cfs)	100 year Storm (cfs)
100	2.1	3.5	4.4	6.2
200	0.4	0.7	0.8	1.1
300	0.3	0.4	0.6	0.8
400A	1.3	2.8	2.8	4.0
400B	0.9	1.4	1.5	2.5
400C	0,7	1.2	1.4	2.2
400D	1.7	2.9	3.4	5.2
400E	1.8	3.0	3.4	5.2
400F	0.3	0.6	0.6	1.0
400G	0.4	0.7	0.8	1.2
400H	1.3	2.2	2.6	3.9
400I	1.0	1.8	2.0	3.1
400J	0.9	1.5	1.7	2.6
500	0.3	0.4	0.5	0.8

4 Proposed Drainage System

4.1 Ditches

The final configuration will not utilize trackside ditches. The Phase I design does provide for temporary concrete ditches to convey runoff within the vacant areas adjacent to each of the tracks. The ditches are graded to drain towards the catch basin improvements. The swales have a triangular cross-section with 3:1 side slopes and 24" in depth. They will convey a flowrate no greater than 2 cfs with a 0.5% gradient. A typical normal depth calculation is provided for this condition in Appendix C. Design and calculations for each ditch will be provided during final design.

4.2 Underdrains

The phase I design proposes underdrains located adjacent to the 'INSP' and 'STR1' track alignments. The underdrains will be sized per AREMA 4.22.5, where the minimum size of underdrain is 15" HDPE perforated pipe. The minimum slope gradient is 0.25%. Two normal depth calculations are provided in Appendix C, one calculation indicating the allowable runoff for a 12" and a second for the allowable runoff for a 15" underdrain. Design refinements, including the placement of cleanouts will be provided during final design

4.3 Pipe Network

The project storm drain backbone system is subdivided into three separate storm drains, Lines A B, and C. The flow is then combined and conveyed within Line E which is connected to the underground storage system. Line F then conveys the flow into Existing Line 2 near the rail right of way. Lines C-1, C-2, C-3 and C-4 are considered lateral lines connecting catch basins and other inlet structures to the backbone system and are to be analyzed during final design. Table 4-1 below provides the maximum Q within each backbone line and the proposed size. Normal depth calculations will be used for the preliminary design phase to size the backbone storm drain system.

Table 4-1. Proposed Runoff Flow by Storm Drain Line

Line	2 Year Storm (cfs)	10 Year Storm (cfs)	25 Year Storm (cfs)	100 year Storm (cfs)	Storm Drain Size (Inches)	Percent Full
Line A	5.3	9.6	11.3	16.2	24"	84%
Line B	3.8	6.4	7.7	11.4	24"	63%
Line C	3.9	6.5	7.6	11.6	24"	63%

Line E	11.3	19.8	22.9	34.1	36”	63%
Line F	-	-	-	-	Pending Final Design	

4.4 Underground Storage System

An underground storage system located under the western parking stalls is proposed for the preliminary design phase. Future calculations will be used for sizing of the basin and for Line F connecting to the existing 24” storm drain system.

5 Conclusions

The LOSSAN Rail Corridor Agency is proposing the relocation and expansion of the existing Pacific Surfliner layover facility in the City of San Luis Obispo. The full-build facility will include storage and servicing tracks, operations and maintenance buildings. The site will provide for a maintenance access roadway and a Class I Bike Trail for public use.

The project site grading is in a bowl type configuration. A storm drain backbone system is designed to collect most of the onsite runoff and conveying it towards an underground storage system located within the access roadway parking aisle. As a result, the existing points of discharge including the adjacent properties and Roundhouse Street will experience no net change or a reduction of surface flow when compared to the current conditions.

The proposed drainage system will be designed to accommodate the 100-year post-development runoff flows by conveying the pre-development runoff to ‘Existing Line 2’, a 24” storm drain crossing the project site. The proposed underground storage system will detain the difference between the pre- and post-development flows, eventually discharging the detained flow to the downstream systems.

Future analysis in the final design stage will be required to determine the existing capacity of Existing Line 2. The existing site runoff is uncontrolled surface flow, conveyed towards the storm drain by unlined swales and roadway curb and gutter improvements into the existing storm drain system at the existing inlets located adjacent to Alphonso Street or the inlet improvements within the existing parking lot. All the existing project runoff is conveyed into the Alphonso Street storm drain. Additional hydraulic analysis is required to confirm the available capacity within the storm drain between the proposed point of connection and the existing inlet located adjacent to Alphonso Street as well as size the proposed storm drain improvements. The capacity analysis will determine the size of the underground storage system needed to detain the difference between the pre-development and post-development runoff volume.

Appendix C. Normal Depth Calculations

Worksheet for LINE A (COMBINED) - 100 YEAR

Project Description	
Friction Method	Manning Formula
Solve For	Normal Depth

Input Data	
Roughness Coefficient	0.013
Channel Slope	0.005 ft/ft
Diameter	24.0 in
Discharge	16.20 cfs

Results	
Normal Depth	20.0 in
Flow Area	2.8 ft²
Wetted Perimeter	4.6 ft
Hydraulic Radius	7.3 in
Top Width	1.50 ft
Critical Depth	17.4 in
Percent Full	83.2 %
Critical Slope	0.007 ft/ft
Velocity	5.80 ft/s
Velocity Head	0.52 ft
Specific Energy	2.19 ft
Froude Number	0.749
Maximum Discharge	17.21 cfs
Discharge Full	16.00 cfs
Slope Full	0.005 ft/ft
Flow Type	Subcritical

GVF Input Data	
Downstream Depth	0.0 in
Length	0.0 ft
Number Of Steps	0

GVF Output Data	
Upstream Depth	0.0 in
Profile Description	N/A
Profile Headloss	0.00 ft
Average End Depth Over Rise	0.0 %
Normal Depth Over Rise	63.1 %
Downstream Velocity	Infinity ft/s
Upstream Velocity	Infinity ft/s
Normal Depth	20.0 in
Critical Depth	17.4 in
Channel Slope	0.005 ft/ft
Critical Slope	0.007 ft/ft

Worksheet for LINE B PIPE - 100 YEAR

Project Description	
Friction Method	Manning Formula
Solve For	Normal Depth

Input Data	
Roughness Coefficient	0.013

1 Introduction

At the request of the Los Angeles – San Diego – San Luis Obispo (LOSSAN) Rail Corridor Agency (Agency), HDR and HMMH conducted noise and vibration analysis for the proposed Central Coast Layover Facility (CCLF) Project (Project). The purpose of this report is to analyze the potential for noise and vibration impacts on sensitive land uses as a result of the Project. The analysis areas for this report include the noise analysis area defined as the area within 650 feet of the Project which is the screening distance identified by the Federal Transit Administration (FTA) (FTA, 2018), and vibration analysis area defined as the area within 200 feet, also the screening distance identified by FTA, of where intercity trains would operate.

This page is intentionally blank.

2 Project Description

2.1 Project Overview

The Los Angeles – San Diego – San Luis Obispo (LOSSAN) Rail Corridor Agency (Agency) is proposing the relocation and expansion of the existing Pacific Surfliner layover facility located at the northern end of the LOSSAN rail corridor in San Luis Obispo, California. The proposed facility would increase overnight layover and storage capacity to support the service goals and objectives outlined for the Pacific Surfliner in both the 2018 California State Rail Plan (State Rail Plan) and the LOSSAN Agency's Fiscal Year (FY) 2019-20 and 2020-21 Business Plan (Business Plan).

Currently, one Pacific Surfliner train overnights each day in San Luis Obispo for an early morning departure the following day. Both the State Rail Plan and the LOSSAN Agency Business Plan identify growth in the service levels of the Pacific Surfliner to San Luis Obispo. As currently configured, the existing single-track facility does not have the capacity to accommodate any growth in service levels beyond the current service. The proposed Project will facilitate the maintenance of equipment at the northern terminus of the LOSSAN rail corridor. It will allow additional passenger trains to be maintained, serviced, and stored in San Luis Obispo overnight with no impact to the operations of Union Pacific (UP), allowing a second, more convenient, morning departure from San Luis Obispo, subject to UP approval of the proposed schedule. It will also provide for the opportunity to store and service additional train sets used for further expansion of the Service.

2.2 Project Location

The Project site is located on approximately 13 acres of relatively undeveloped land in the City of San Luis Obispo, which is situated along the Central Coast region of California, approximately 190 miles north of Los Angeles (Figure 2-1). The existing Pacific Surfliner layover facility is located directly across from the San Luis Obispo Amtrak Station, located at 1011 Railroad Avenue. The Project site is located approximately 0.3-mile south of the San Luis Obispo Amtrak Station. The Project site extends from south of the San Luis Obispo Railroad Museum's parking lot to east of Lawrence Drive. The Project site is between the Union Pacific Main Tracks and existing commercial and residential development to the west.

As shown on Figure 2-2, the Project site is located entirely within the City of San Luis Obispo's Railroad Historic District (District). The District boundary covers approximately one-half square mile and extends along the railroad right-of-way (ROW) for a distance of about 1.7 miles in roughly a north-south axis. The District includes the original railroad yard, plus residential and commercial-zoned property on the west side of the railroad ROW (City of San Luis Obispo Community Development Department 1998).

Figure 2-1. Regional Location

Figure 2-2. Project Site

2.3 Proposed Project

The proposed Project includes the construction of a new rail yard, storage and servicing tracks, operations and maintenance buildings, landscape improvements, and safety and security features. Perimeter fencing would be installed around the facility for site security and public safety.

2.3.1 Rail Yard and Tracks

The proposed Project would construct a new rail yard with up to five new tracks, with Track 1 positioned as the westernmost track and Track 5 positioned as the easternmost track.

- Track 1 – Bypass and wash track with train wash building
- Track 2 – Storage track with service and inspection (S&I) position
- Track 3 – Storage track
- Track 4 – Storage track
- Track 5 – Storage track

Trains would enter the site from the mainline switch at the north end of the site, passing through the Train Wash on Track 1. Trains would travel south, passing the train wash building onto the tail track and then reverse direction into either S&I position or to one of the other storage tracks. Upon reaching the S&I position or a storage track, the trains would park for the night, connecting to ground power to allow for the electric functions of the train to continue and connecting to a yard air compressor to keep the brake system charged. These connections allow for continuity of these functions without the locomotive engine running, minimizing engine idling within the facility.

From the S&I or storage positions, daily servicing and light maintenance can occur. Trains stored on the S&I track would also undergo additional safety, operational and reliability inspections.

Trains would exit the facility north toward the San Luis Obispo station at intervals based on the approved and published service schedules.

2.3.2 Buildings

The proposed CCLF would consist of a series of single-story structures housing a variety of functions including office space, storage space, workshops, train wash, train S&I and wheel truing.

Operations/Fleet Maintenance Building. The Operations Building would be an approximately 3,000 square foot (sf) one-story building, which would house administrative offices and restrooms for operations and maintenance staff.

Fleet Maintenance Shops Building. The Fleet Maintenance Shops Building would be a one-story building and approximately 2,900 sf, and would house a welding/fabrication shop, brake and coupler shop, and toolbox storage.

Parts Storeroom Building. The Parts Storeroom Building would be a one-story building, approximately 1,500 sf, located adjacent to the Fleet Maintenance Shops Building and Maintenance of Way Building. This building would store components and parts that are required on a frequent basis to support maintenance activities, and would include a dedicated secure area for shipping, receiving and storage.

Maintenance of Way (MOW) Building. The MOW Building would be a one-story building, approximately 2,200 sf, located adjacent to the Parts Storeroom Building. MOW is responsible for inspection and maintenance of track, roadbed, and buildings. MOW is also responsible for inspection and maintenance of non-revenue vehicles assigned to the CCLF.

Wash Building. The Wash Building would be a 9-10,000 sf one-story building, located at the center of the Project site on Track 1. An automatic, drive-through train wash would be enclosed in the Wash Building. As described above, trains entering the maintenance facility would pass through the Train Wash Building for cleaning prior to being placed on one of the storage tracks.

The train wash would operate 7 days per week. Each train arriving at the facility at the end of its service day will enter through the wash, requiring it to run for about 5-10 minutes for each train. The timing of the train wash operation will depend on the approved and published service schedule and would likely be during the evening hours.

Wheel Truing Building. The Wheel Truing Building would be a one-story building, approximately 1,900 sf in size and located at the north end of the Project site adjacent to the San Luis Obispo Railroad Museum parking lot. The Wheel Truing Building would house an underfloor pit-mounted wheel truing machine. Use of this facility is anticipated to be infrequent and not part of the daily operation.

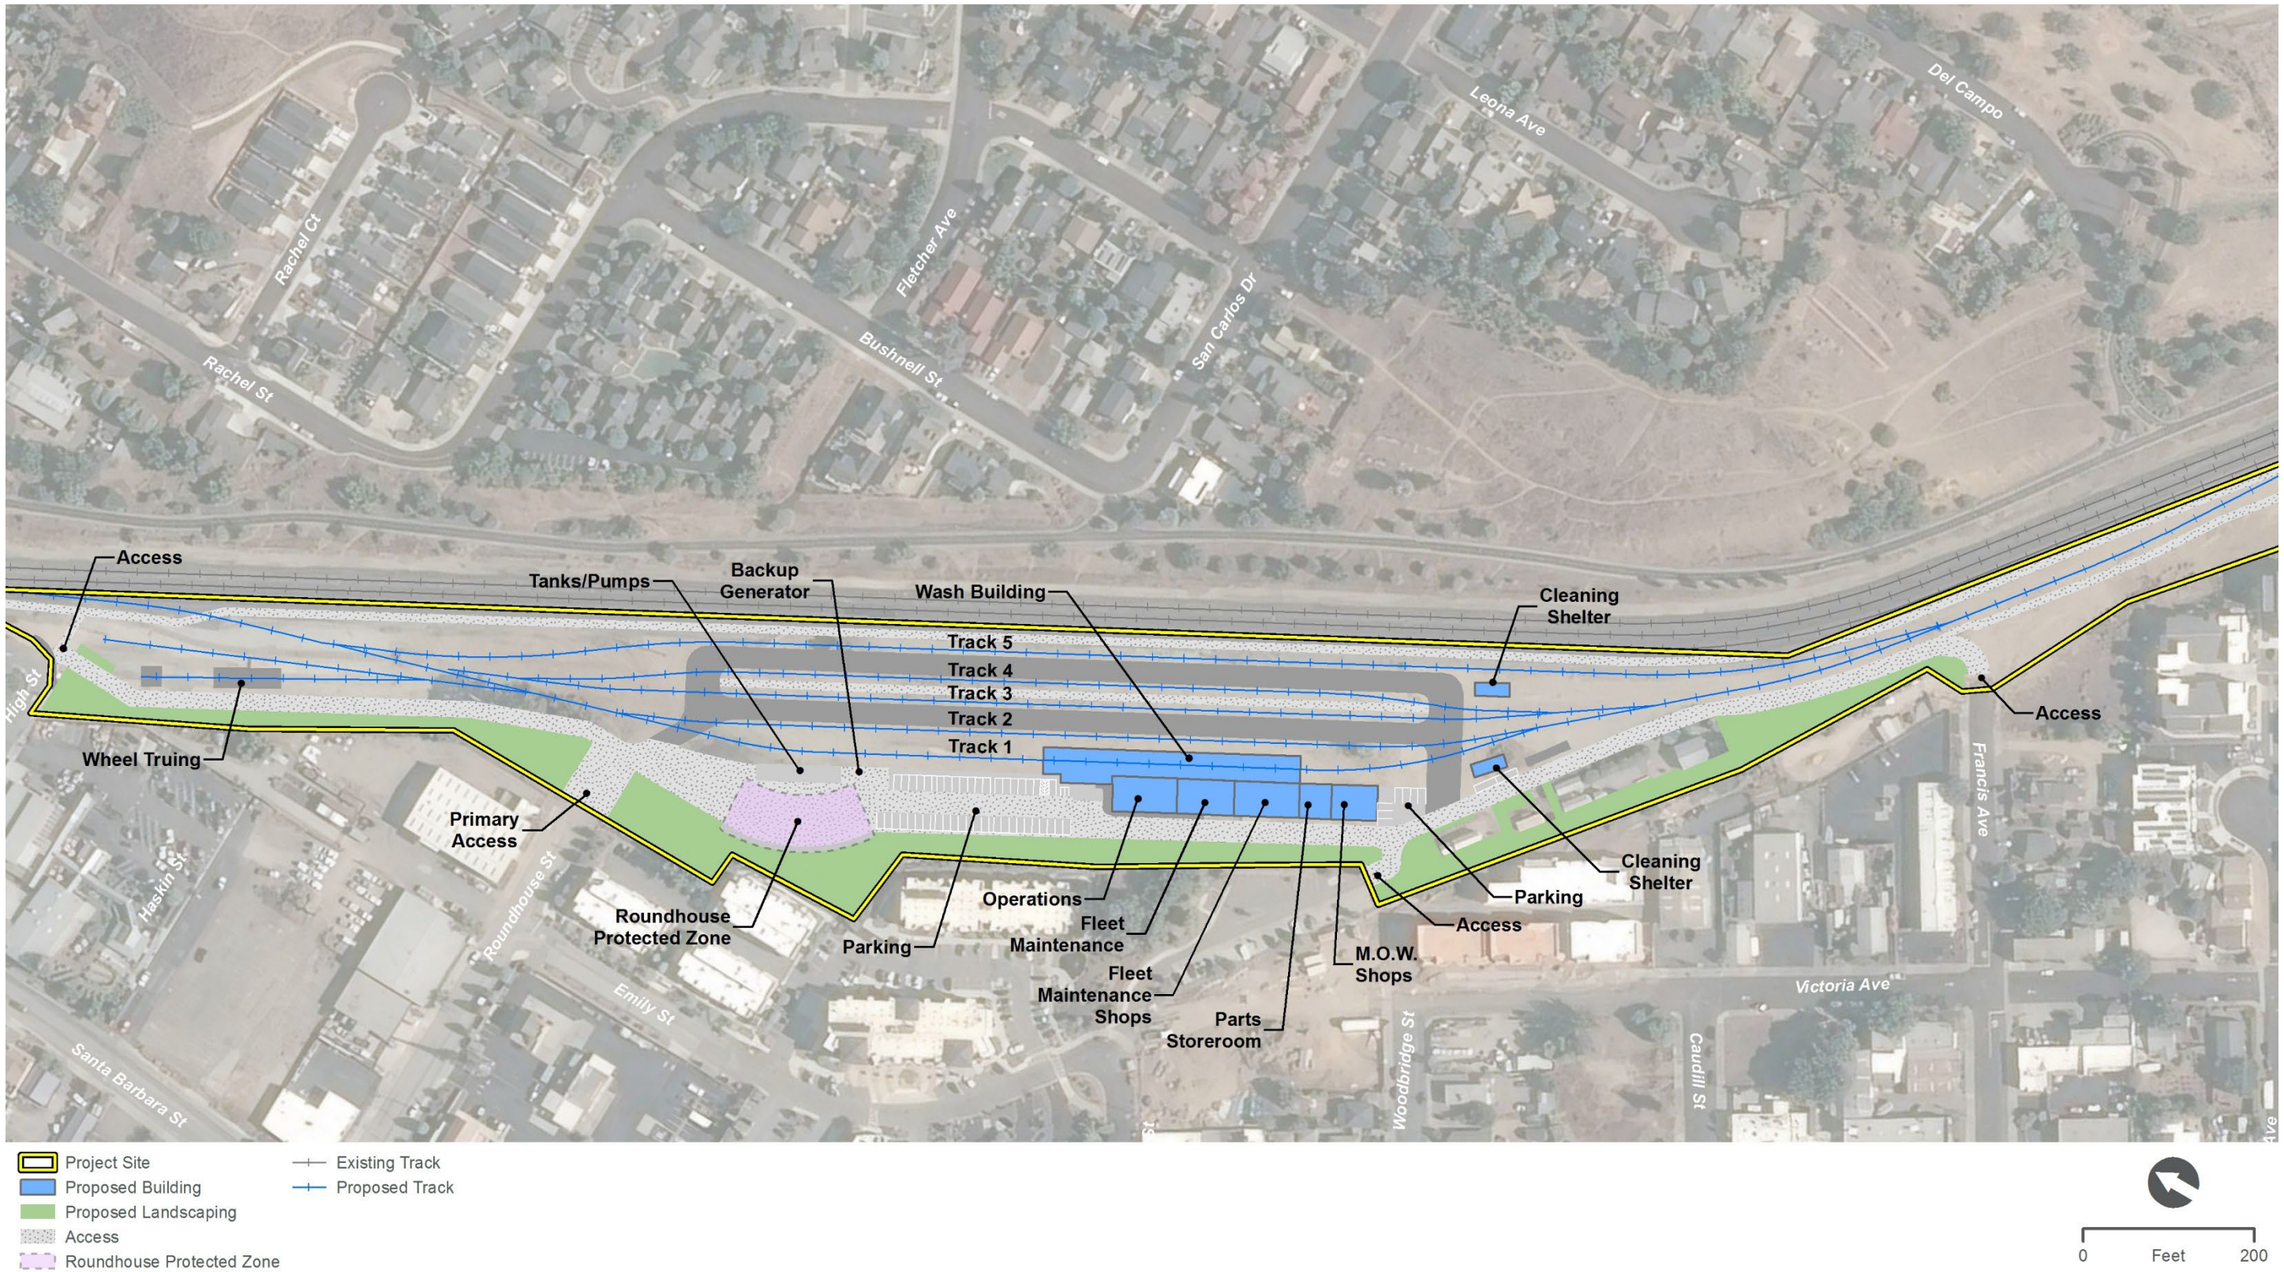
S&I Shelter

Track 2 would function as a storage track with an S&I position. The S&I track would be covered by a 24' high shelter. To provide access to the underside of a train for inspection and maintenance, a lower level work area or gauge pit would be installed.

Cleaning Shelters

Two cleaning shelters would be provided south of the Wash Building and storage tracks.

Figure 2-3. Site Plan



This page is intentionally blank.

Parking

The proposed Project would provide a total of 54 on-site parking spaces for employees and visitors. Most of the parking spaces would be located on the west end of the central yard in between the Roundhouse Site and Operations building. The other parking spaces would be located adjacent to the MOW Shops building.

Access

Primary employee and visitor access to the site would be from Roundhouse Avenue. Additional emergency access to the site would be available from the train museum parking lot (north end of site), from the parking lot off Alphonso Street (center of site), and from Francis Avenue (south end of site).

Landscape Plan

The proposed Project would install landscaping to buffer maintenance and servicing operations from adjacent neighboring residential and recreational uses. The Project's plant palette will be comprised of species native or fully adapted to San Luis Obispo's climate. The list of species will draw from the San Luis Obispo County-Approved Plant List and the Calscape, or California Native Plant Society, database of plants native to the area. Species will be selected to be relatively low maintenance, have minimal leaf litter, and be non-fruiting so as not to attract vectors or birds.

East Landscape Buffer

Single-family residences overlook the east edge of the Project site, with views toward the hills of the surrounding regional open space west of the city. A Class I bike trail traverses the Historic Railroad District, connecting to regional trails and other San Luis Obispo recreation sites.

Landscape material for the east buffer will be congruent with the existing plant palette – a diverse mix of native/adaptive species consistent with the California chaparral and foothill meadow plant communities. The main objective in enhancing the landscape buffer at the east edge is to frame views over the existing rail yard toward the distant hills, screening the Project site and its enhanced maintenance operations.

West Landscape Buffer and Class I Bike Trail

Multi-family condominiums and apartments are located adjacent to the Project site's western edge. The majority of the on-site landscape buffer area is to be established between the proposed rail improvements and maintenance program elements and these adjacent residences.

Additionally, a new segment of Class I bike trail, from approximately High Street to Francis Avenue, is identified in the City of San Luis Obispo's 2013 Bicycle Transportation Plan's Eastern Area Implementation Projects as a future Class I trail connecting existing Class I, II, and III segments to comprise the Railroad Safety Trail. This portion incorporates the *High to Roundhouse* segment and the majority of the *Roundhouse to McMillian* segment, approximately 1,750 linear feet of new Class I trail. Should Project conditions, land use, and right-of-way alignments allow, this segment could be constructed, to complete the connection to Francis Avenue.

The bike path would meander slightly through the landscape buffer, providing users distance from the rail yard operations and limiting the impact of trail activity noise on the adjacent residential communities. This

new connection would provide largely protected bike and pedestrian trail access from the Old Town Historic District through the Railroad Historic District, from the San Luis Obispo Railroad Museum, past the rail yard at Project site, and back into the urban fabric of housing and light commercial use.

Roundhouse Protected Zone

The new segment of Class I bike trail presents the opportunity to facilitate public view of the historic site of the Southern Pacific Railroad roundhouse, where the structure's remnant foundation remains visible. Hosting the last steam locomotive in 1956, the roundhouse was demolished in 1959, with the train depot following in 1971, and finally, the turntable in 1994. The unique historic relevance of the roundhouse continues the rail history narrative set by the Railroad Museum to the north, and reinforces the area's designation as the Railroad Historic District.

The Project's program elements would be arranged to avoid significant impact to the roundhouse footing, preserving as much exposed surface for view as possible. The proposed Project would install a transparent perimeter fence along the southwest edge of the roundhouse, where bench seating and interpretive signage will be sited to create an informational node along the active transportation corridor.

Site Security

The site perimeter would be secured with an 8-foot transparent anti-climb fence. Motorized vehicular gates would be provided at all egress/ingress points. Video surveillance cameras would also be installed along the perimeter of the site.

Phasing

Funding is currently not available to construct the entire facility at once. Instead a phased construction approach is intended, constructing an initial portion of the facility which includes the most immediately needed elements, and adding the remaining components as the need arises and additional funding becomes available. The following sections identify the components that would be constructed under Phase 1 and later phases of the proposed project.

Phase 1

Phase 1 intends to meet or exceed the functionality of the existing layover facility and add layover capacity for at least one additional train. This initial phase would include landscaping and trail enhancements around the Phase 1 footprint as well as water quality improvements and underground utility services to serve the ultimate facility. Phase 1 would include the following project components:

- North portions of West Landscape Buffer, 30 feet with pedestrian/bike path, 20-foot minimum setback plus 10 feet
- East Landscape Buffer, green space enhancement wrapping the existing bike path north-to-south
- Upper Yard/Lower Yard site improvements including:
    - Civil topography, grading, drainage, stormwater utilities
    - North-to-south 20-foot access drive, yard paving and service roads
    - Improvements at "Roundhouse Protected Zone"

  - Yard perimeter fencing and gates at access points - one (1) main entry at Roundhouse Street (north end of Central Yard); three (3) emergency access points (north and south end of site, south end of Central Yard); fencing only around yard body
  - All railroad maintenance roads and mainline east / west perimeter fencing; yard paving and site access roads
  - Trackside shelters and services including waste / recycling enclosure
- Temporary portable buildings for essential work functions
- 1 Service & Inspection (S&I) Position, gage pit with canopy
- 2 storage tracks, including S&I track
- Yard / Exterior Area site improvements including partial build-out of parking and driveway

Later Phases

Later phases would include the remaining Master Plan components as dictated by operational needs and as allowed by available funding. Initially this would focus on all items identified as essential components of the ultimate facility, followed later by those features that would expand overall capacity of the facility, as well as enhance operations and efficiency, but which are not immediately mandatory. The following project components could be constructed on the project site based on operational needs and available funding:

- Remaining portions of West Landscape Buffer, 30 feet with pedestrian/bike path, 20-foot minimum setback plus 10 feet
- Yard/Exterior Area site improvements remaining from Phase 1 including parking, driveway, laydown and enclosed yard areas, emergency generator
- 1 wash track with Train Wash Building foundation and pit / infrastructure
- 1 south tail track and connection
- 3 locomotive storage tracks, including 1 extended-length storage track
- Facility Structures (core/shell, interior build-out, equipment installation)
  - Operations (administration)
  - Fleet Maintenance
  - Fleet Maintenance Shops
  - Parts Store Room
  - MOW Shops foundation/pad
  - Train Wash Building, structure/wash arch/canopy
  - Wheel Truing Building and Support Areas
  - Fueling structure and arch
- Wheel Truing Building trackwork and switch
- Retaining wall and grading to support wheel truing building and trackwork

2.3.3 Construction

As described above, funding is currently not available to construct the entire facility at once. Therefore, a phased construction approach is intended, constructing the Phase 1 project components first, and adding the remaining components as the need arises and additional funding becomes available. The following sections provide details regarding the project timeline and construction process.

Phase 1

Project construction for Phase 1 would begin as early as April 2024 and last for approximately 19 months. The work would begin with ground improvements to prepare the site for construction of buildings. Once the buildings are constructed the tracks would be installed. Construction may involve multiple crews working simultaneously and would include equipment such as track stabilizers, excavators, front-end loaders, rubber-tired dozers, cranes, haul trucks, and water trucks.

A summary of the construction activities associated with Phase 1 is provided below:

- Demolition and Rough Grading
- Utility Relocations
- West/East Landscape Buffer and Bike Path
- Access Drive, yard paving and service roads
- Fencing
- S&I Position, gage pit with canopy
- Storage track and 2 turnouts
- Exterior parking and driveway

Later Phases

Project construction for the later phases would be approximately 16 months in duration. Mobilization and demobilization time would add to the duration for later phases depending on how they end up being broken out, though breaking the remaining work into smaller phases would reduce the magnitude of impact for each smaller phase. A summary of the construction activities associated with later phases is provided below:

- West/East landscape buffer and bike path
- Exterior parking and driveway
- Track construction and 10 turnouts
- Operations building
- Fleet maintenance building
- Parts store room
- MOW shops foundation/pad
- Train wash building

- Wheel truing building
- Retaining wall
- Fueling structure

Material and equipment imports and construction personnel would access the Project study area via walking points from the nearest fence access or staging area. Most construction equipment would be brought to the project site at the beginning of the construction process during construction mobilization and would remain on-site throughout the duration of the construction activities for which they were needed

Construction activities would be scheduled during time frames that allow for exclusive track occupancy by construction crews to minimize effects on LOSSAN operations. To the greatest extent possible, construction activities would be scheduled during the daytime. No weekend work is anticipated.

3 Regulatory Framework

3.1 Noise

3.1.1 Federal Regulations and Guidelines

Several federal laws and guidelines are relevant to the assessment of ground transportation noise and vibration impacts and apply to the Project:

- The Noise Control Act of 1972 (42 United States Code Section 4910) was the first comprehensive statement of national noise policy. It declared that "it is the policy of the United States to promote an environment for all Americans free from noise that jeopardizes their health or welfare."
- The Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018) provides the methodology and impact criteria applicable to conventional passenger rail and transit components associated with the Project.

FTA published a newly revised noise and vibration impact assessment manual in 2018. The impact criteria are based on the goal of maintaining a noise environment considered acceptable for land uses where noise may have an impact. The noise exposure is measured in terms of the day-night average sound level (L_{dn}) for residential land uses or in terms of the hourly equivalent sound level (L_{eq}) for other land uses.

FTA states that in cases where changes are proposed to an existing transit system, the cumulative noise criteria can be used (FTA 2018). In the case of this Project, the cumulative noise criteria are appropriate because the existing facility is being relocated and expanded withing the railroad right-of-way where LOSSAN trains operate.

In FTA's *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018), noise impact criteria for the operation of rail facilities are based on the change in outdoor noise exposure using a sliding scale with three land use categories and three degrees of impact. The criteria were established to reflect a heightened community annoyance caused by late-night or early morning service, as well as communities' varying sensitivity to noise from projects during different ambient noise conditions.

For operational rail noise, FTA's three land use categories are as follows:

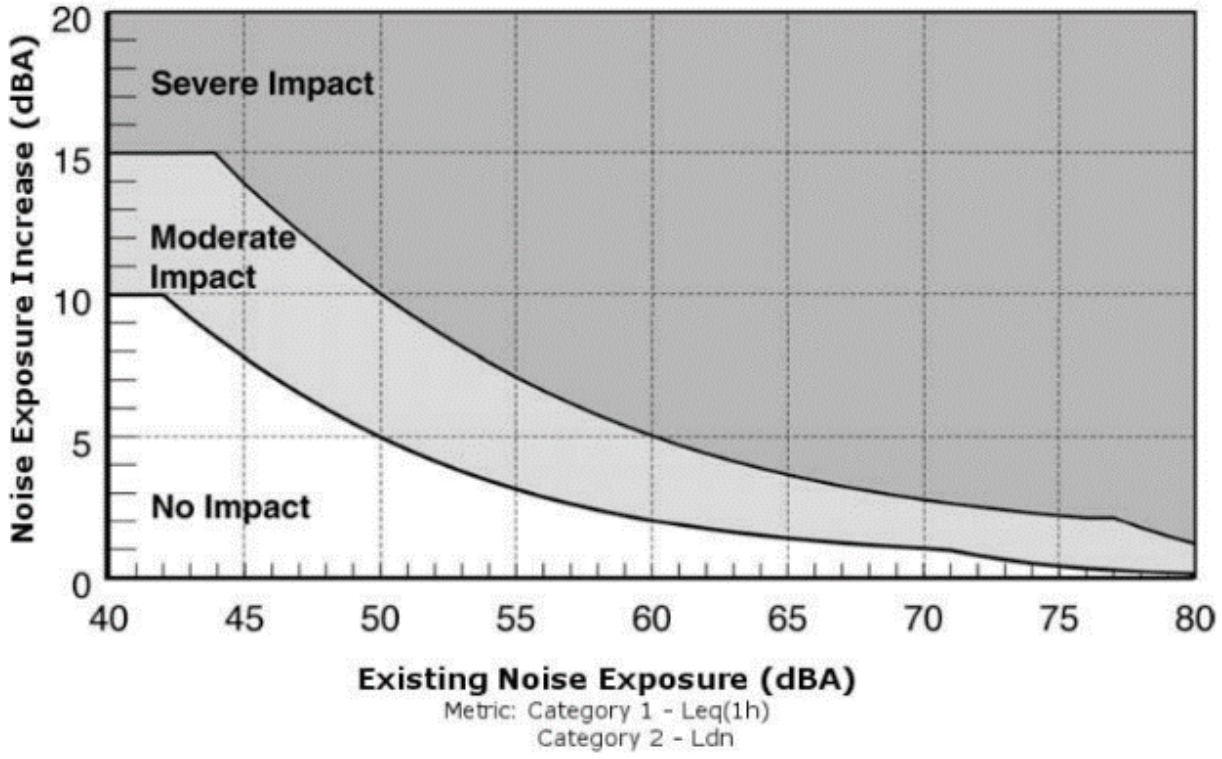
- **Noise Category 1** – Tracts of land where quiet is an essential element in their intended purpose, such as outdoor amphitheaters, concert pavilions, and national historic landmarks with significant outdoor use.
- **Noise Category 2** – Residences and buildings where people normally sleep, including homes, hospitals, and hotels.
- **Noise Category 3** – Institutional land uses (i.e., schools, places of worship, libraries) with use typically during the daytime and evening. Other uses in this category can include medical offices, conference rooms, recording studios, concert halls, cemeteries, monuments, museums, historical sites, parks, and recreational facilities.

The three categories are determined from general land use information about each receiver. No Category 1 receivers are located within 1 mile of the Project alignment, which is well beyond the typical FTA screening distance for noise or vibration impacts. Outdoor hourly L_{dn} applies to Category 2, whereas outdoor L_{eq} applies to Category 3.

Noise impacts on Category 2 and Category 3 land uses as a result of a project are assessed by comparing existing and future project-related outdoor noise levels. Figure 3-1 and Figure 3-2 illustrate the FTA noise impact criteria as they relate to each land use category. The criterion for each degree of impact is based on a sliding scale dependent on the existing noise exposure and the increase in noise exposure attributable to the project. Figure 3-1 and Figure 3-2 illustrate the cumulative noise impact criteria to be used on the Project. Based on FTA criteria, potential noise impacts fall into three types: no impact, moderate impact, and severe impact (FTA 2018). The impact categories are described further below:

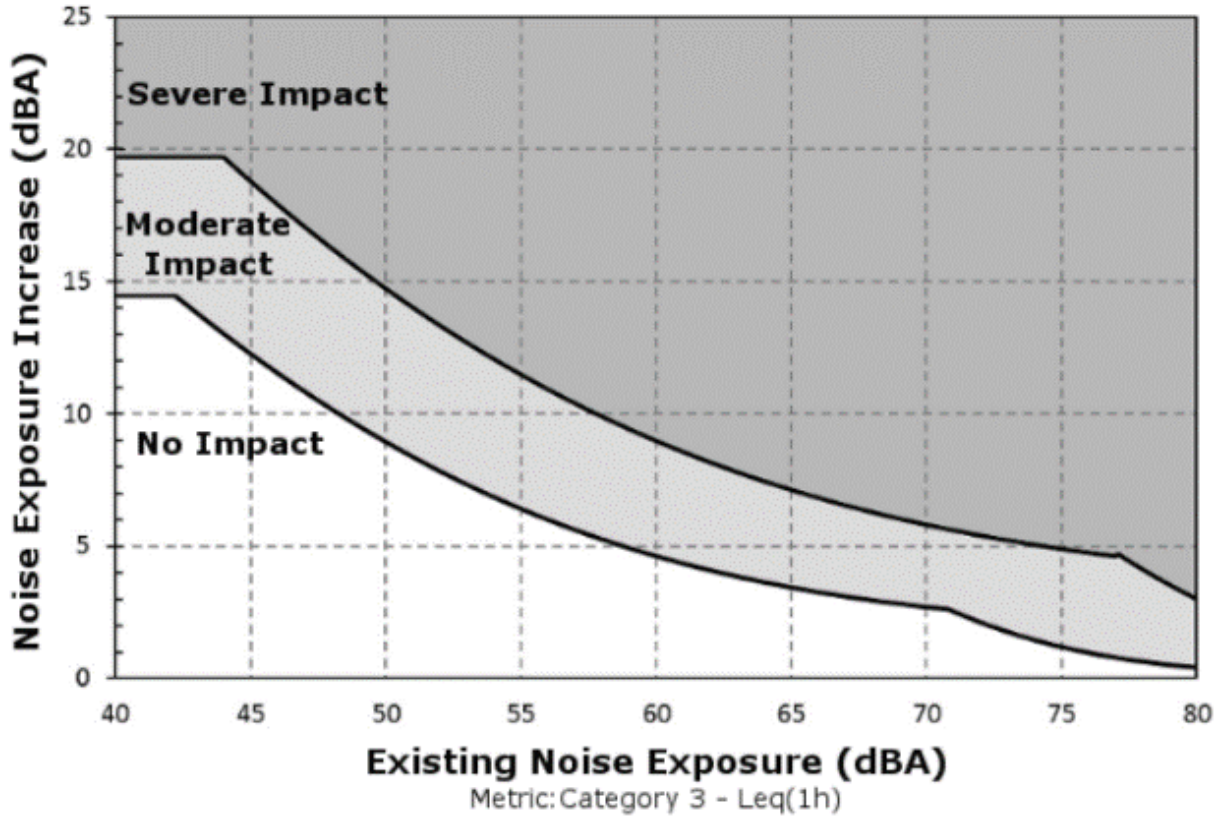
- **No impact** – A project on average would result in an insignificant increase in the number of instances where people are highly annoyed by new noise. This impact level would not require mitigation.
- **Moderate impact** – The change in cumulative noise is noticeable to most people but may not be enough to cause strong, adverse community reactions. The FTA manual indicates mitigation for this impact level should be considered but is not required.
- **Severe impact** – A significant percentage of people would be highly annoyed by the noise, possibly resulting in a strong, negative community reaction. The FTA manual indicates mitigation for this impact level is required.

Figure 3-1. Federal Transit Administration Cumulative Noise Levels Allowed by Criteria Category 2 Land Use



Source: FTA 2018

Figure 3-2. Federal Transit Administration Cumulative Noise Levels Allowed by Criteria Category 3 Land Use



Source: FTA 2018

The FTA manual contains tables listing suggested construction noise impact criteria depending upon the level of detail/understanding of the construction phase (FTA 2018). For the more detailed approach applicable to the Project, the FTA's guidelines for assessment of construction noise shown in Table 3-2 are suggested for use due to different noise levels for daytime and nighttime construction. Daytime is defined as 7:00 a.m. to 10:00 p.m., and nighttime is defined as 10:00 p.m. to 7:00 a.m.

Table 3-1. Prescriptive Federal Transit Administration Construction Noise Assessment Guidelines

Land Use	8-Hour L_{eq} (dBA)		30-Day Average L_{dn} (dBA)
	Day	Night	
Residential	80	70	75[a]
Commercial	85	85	80[b]
Industrial	90	90	85[b]

Source: FTA 2018

Notes:

[a] In urban areas with very high ambient noise levels (L_{dn} greater than 65 dB), L_{dn} from construction operations should not exceed existing ambient + 10 dB.

[b] 24-hour L_{eq}, not L_{dn}

dB=decibel; dBA=A-weighted decibel; L_{eq}=equivalent noise level; L_{dn}=day-night average sound level

3.1.2 State Regulations

At the state level, the California Noise Control Act was enacted in 1973 (Health and Safety Code Section 46010, et seq.). It allows the Department of Health Services' Office of Noise Control to offer assistance to local communities that are developing local noise control programs and work with the Office of Planning and Research to provide guidance for the preparation of the required noise elements in city and county general plans, pursuant to Government Code Section 65302(f).

The California Environmental Quality Act (CEQA; Public Resources Code, section 21000, et seq.) is a state statute passed in 1970. CEQA requires state and local agencies to identify the significant environmental impacts of their actions, including potential impacts from noise and vibration, and avoid or mitigate those impacts when feasible.

The State of California has established land use compatibility criteria that provide guidance on the compatibility of different types of land uses based upon the existing community noise level. These guidelines are often adopted by city and county agencies for land use planning purposes. The State of California has not adopted specific noise criteria that are applicable to rail projects; therefore, the noise impact assessment is based on the guidelines provided by FTA.

3.1.3 Local Regulations

The Project would be in the City of San Luis Obispo, which has regulations that pertain to construction noise; however, the City does not have authority to regulate noise from railroads. Specifically, the City controls construction noise via Chapter 9.2 of its Code of Ordinances (City of San Luis Obispo 2010). This ordinance would allow the Project to be constructed between the hours of 7:00 a.m. and 7:00 p.m. so long as it does not exceed 66 A-weighted decibels (dBA) hourly equivalent sound level (L_{eq}) at single-family residences and 65 dBA L_{eq} at multi-family residences. An exemption would be needed with the City if the Project is required to construct outside of this time period or if exceeding these thresholds is unavoidable. The City's Code does provide an exemption for federally or state mandated projects, of which the Project qualifies since it operates under the authority of the state. In lieu of applicable local regulations, the Project would have an impact if it exceeds the FTA guidelines (see Table 3-1).

3.2 Vibration

3.2.1 Federal Regulations

The evaluation of vibration-impact levels, stated as vibration decibels (VdB), is based on the land use category and the number of vibration events per day. The impact level also depends on the type of analysis being conducted (i.e., ground-borne vibration or ground-borne noise).

The FTA manual provides guidelines to assess human response to different levels of ground-borne noise and vibration, as shown in Table 3-2. There are no Category 1 land uses considered within screening distance (Section 4.3) of the Project. All of vibration-sensitive land uses in the Project study area are Category 2 land uses. Frequent events are defined as more than 70 vibration events per day, while occasional events are defined as between 30 and 70 vibration events per day. Infrequent events are defined as being fewer than 30 events per day.

For areas where there are vibration events, such as those along existing shared railroad corridors, FTA defines a corridor as being heavily used if there are more than 12 trains per day, moderately used if there are 5 to 12 trains per day, and infrequently used if there are less than 5 trains per day. The Project rail corridor would be classified as being infrequently used. For these conditions, an impact would occur if Project operational vibration levels were to exceed the thresholds provided in Table 3-2 with the addition of the Project. For areas that already exceed the FTA criteria the FTA has identified that a potential impact would occur if the Project-related vibration levels resulted in an increase of 3 VdB or more.

Ground-borne noise is normally not a consideration when trains are at grade (i.e., not underground or where there are basements or human activity in spaces underground). In these situations, the air-borne noise is the major consideration. Ground-borne noise generally becomes an important consideration for subways or other projects in which part of the alignment includes a tunnel.

FTA construction-related vibration guidelines call for an investigation of the potential for vibration-induced damage to fragile or extremely fragile buildings (FTA 2018). Damage to a building is possible (but not necessarily probable) if ground-vibration levels exceed the following criteria:

- Exceeds 0.20-inch-per-second peak particle velocity (PPV; approximately 100 VdB) for fragile buildings
- Exceeds 0.12-inch-per-second PPV (approximately 95 VdB) for extremely fragile buildings

No fragile or extremely fragile buildings are located within screening distance (Section 4.4) of the Project study area. Table 3-2 presents the ground-borne vibration and noise impact criteria.

Construction vibration is assessed based on the potential for damage and the likelihood of annoyance. FTA indicates engineered concrete and masonry structures have damage criteria of 0.3 PPV (inches per second). To assess the potential for construction-vibration annoyance, the same vibration thresholds as those identified in Table 3-2 for operational vibration are applied.

Table 3-2. Ground-borne Vibration and Noise Impact Criteria

Land Use Category	Ground-borne Vibration Impact Levels (VdB re 1 micro inch/second)			Ground-borne Noise Impact Levels (dB re 20 micropascals)		
	Frequent Events[a]	Occasional Events[b]	Infrequent Events[c]	Frequent Events[a]	Occasional Events[b]	Infrequent Events[c]
Category 1: Buildings where vibration would interfere with interior operations	65 VdB[c]	65 VdB[c]	65 VdB[c]	—[d]	—[d]	—[d]
Category 2: Residences and buildings where people normally sleep	72 VdB	75 VdB	80 VdB	35 dBA	38 dBA	43 dBA
Category 3: Institutional land uses with primarily daytime use	75 VdB	78 VdB	83 VdB	40 dBA	43 dBA	48 dBA

Source: FTA 2018

Notes:

[a] Frequent events is defined as more than 70 vibration events per day.

[b] Occasional events is defined as between 30 and 70 vibration events of the same source per day.

[c] Infrequent events is defined as fewer than 30 vibration events per day.

[d] This criterion limit is based on levels that are acceptable for most moderately sensitive equipment, such as optical microscopes. Vibration-sensitive manufacturing or research would require detailed evaluation to define the acceptable vibration levels. Ensuring lower vibration levels in a building often requires special design of the heating, ventilation, and air-conditioning systems and stiffened floors. Vibration-sensitive equipment is not sensitive to ground-borne noise.

dB=decibel; dBA=A-weighted decibel; VdB=vibration decibels

3.2.2 State Regulations

Ground-borne vibration criteria pursuant to CEQA are provided in Section 6.

3.2.3 Local Regulations

The City of San Luis Obispo does not identify vibration standards or thresholds in their municipal code or other ordinances.

4 Approach

This section describes the overall approach to preparing the noise and vibration analysis for construction and operation. The approach includes acoustic terminology description; vibration terminology description; and methods for assessing operational noise sources, operational vibration, construction noise, and construction vibration.

FTA*'s Transit Noise and Vibration Impact Assessment* (FTA 2018) was followed to evaluate the environmental impacts of the Project. Noise and vibration impacts were assessed using procedures followed by the FTA for regional/intercity rail improvements because FRA defers to FTA procedures for this type of evaluation.

4.1 Acoustic Terminology

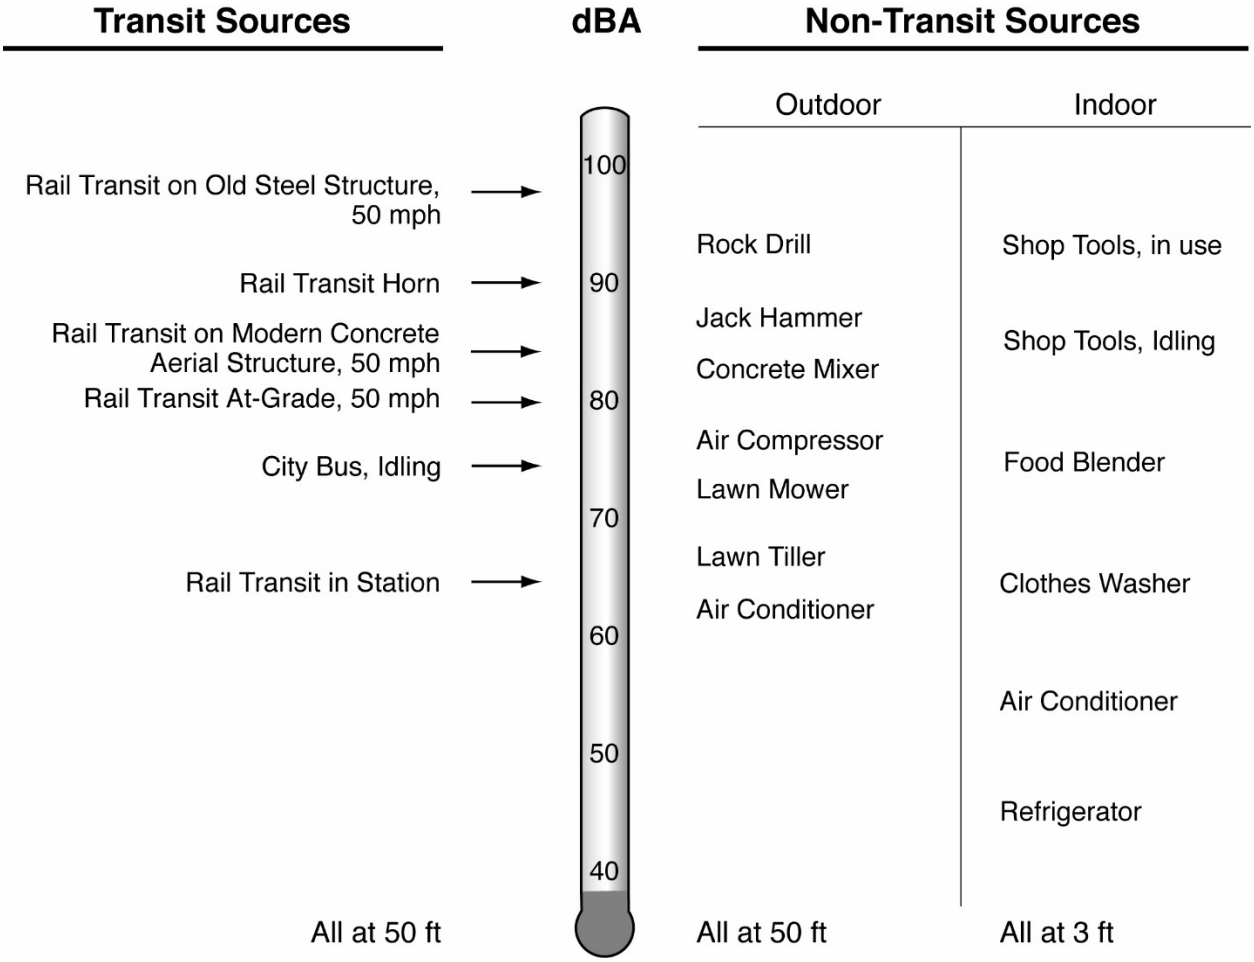
Noise levels are presented on a logarithmic scale to account for the large pressure response range of the human ear. This logarithmic scale is expressed in units of dB. A dB is defined as the ratio between a measured value and a reference value, usually corresponding to the lower threshold of human hearing. The lower threshold of human hearing is defined as 20 micropascals. Typically, a noise analysis examines 11 octave (or 33 1/3 octave) bands ranging from 16 hertz (low) to 16,000 hertz (high). This octave band encompasses the human audible frequency range. Because the human ear does not perceive every frequency with equal loudness, spectrally varying sounds are often adjusted with a weighting filter. The A-weighted filter is applied to compensate for the frequency response of the human auditory system, known as a dBA.

An inherent property of the logarithmic dB scale is that the sound pressure levels of two separate sources are not directly additive. For example, if a sound of 50 dBA is added to another sound of 50 dBA in the proximity, the result is a 3-dB increase, which is a total of 53 dBA and not an arithmetic doubling to 100 dBA. The human ear perceives changes in sound-pressure level relative to changes in loudness. Scientific research demonstrates the following general relationships between sound level and human perception for two sound levels with the same or very similar frequency characteristics:

- One dBA is the practical limit of accuracy for sound measurement systems and corresponds to an approximate 10 percent variation in the sound pressure level. A 1-dBA increase or decrease is a nonperceptible change in sound.
- A 3-dBA increase or decrease is a doubling (or halving) of acoustic pressure level, and it corresponds to the threshold of change in loudness perceptible in a laboratory environment. In practice, the average person is not able to distinguish a 3-dBA difference in environmental sound outdoors.
- A 5-dBA increase or decrease is described as a perceptible change in sound level and is a discernible change in an outdoor environment.
- A 10-dBA increase or decrease is a tenfold increase or decrease in acoustic pressure level but is perceived as a doubling or halving in loudness (e.g., the average person would judge a 10-dBA change in sound level to be twice or half as loud).

Figure 4-1 depicts the estimations of common noise sources and outdoor acoustic environments. It provides a comparison of relative loudness for each of these sources.

Figure 4-1. Relative Loudness



Source: FTA 2018

Noise levels can be measured, modeled, and presented in various formats. The noise metrics that were employed in this analysis have the following definitions:

- ***L_{eq}:*** Conventionally expressed in dBA, the L_{eq} is the energy-averaged, A-weighted sound level over a specified time period. It is defined as the steady, continuous sound level over a specified time, which has the same acoustic energy as the actual varying sound levels over the specified period. The daytime L_{eq} is the energy averaged sound level for the daytime period (7:00 a.m. to 10:00 p.m.), and the nighttime L_{eq} is the energy averaged sound level for the nighttime period (10:00 p.m. to 7:00 a.m.).
- ***L_{dn}:*** The L_{dn} is the average, hourly A-weighted L_{eq} for a 24-hour period, with a 10-dB penalty added to sound levels occurring during the nighttime hours (10:00 p.m. to 7:00 a.m.) to account for individuals' increased sensitivity to noise levels during nighttime hours.

- ***Community noise equivalent level:*** Community noise equivalent level is another average A-weighted L_{eq} sound level measured over a 24-hour period; however, this noise scale is adjusted to account for some individuals' increased sensitivity to noise levels during the evening and nighttime hours. A community noise equivalent level noise measurement is obtained after adding 5 dB to sound levels occurring during evening hours (7:00 p.m. to 10:00 p.m.) and 10 dB to noise levels occurring during nighttime hours (10:00 p.m. to 7:00 a.m.).

4.2 Vibration Terminology

As noted in the FTA's *Noise and Vibration Impact Assessment* (FTA 2018), both train operation and construction activities can be a source of ground-borne vibration. During the construction phase, activities such as driving piles and operating heavy equipment may cause ground-borne vibration. Due to the weight of train equipment, the operation of trains can also cause ground-borne vibration. Vibration is an oscillatory motion, which can be described in terms of displacement, velocity, or acceleration. Velocity or acceleration is typically used to describe vibration. The following two descriptors are frequently used when discussing quantification of vibration:

- ***PPV:*** the maximum instantaneous positive or negative peak of the vibration signal
- ***Root mean square (rms)***: the square root of the average of the squared amplitude of the vibration signal, which is typically calculated over a 1-second period
- ***VdB***: vibration decibels are used to compress the range of rms values

4.3 Methods for Assessing Operational Noise Sources

4.3.1 Rail Noise

The steps described in FTA's *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018) were followed to evaluate the potential noise and vibration impacts of the Project. FTA methodology identifies a noise screening procedure, a general noise assessment, and a detailed noise assessment, which are outlined below.

- **Noise Screening Procedure** – Following the FTA noise screening procedure, the Project type was identified (e.g., rail yard and shops). The Project-to-receiver screening distance is provided in the manual for this Project. Adjustments to the generic screening distances are made to suit a particular project using the methodology in Section 5 of the FTA manual (FTA 2018). For the Project, the Project-to-receiver screening distance identified is associated with the yard and shop activities. FTA indicated that the potential for noise impacts beyond 650 feet is minimal (FTA 2018). Receivers outside of this distance do not require further noise analysis. Receivers within the screening distance are carried forward for either the general noise assessment or detailed noise assessment. In this case, the Project was evaluated using the detailed noise assessment methods.
- **Detailed Noise Assessment** – Following FTA's detailed noise assessment methodology, the noise impacts associated with the Project were quantified through an in-depth analysis. The methodologies outlined in Section 4.5 of the FTA manual (FTA 2018) were used to calculate the noise levels attributable to train operation on the rail alignment under the existing, future-no-project, and future-with-project scenarios (Project-related contribution). Receivers of

interest (i.e., noise-sensitive receptors) were selected using the guidance provided in Section 4.5 of the FTA manual.

The Project would be built in two phases as described in Section 2, Project Description. During the first phase, operational noise would be associated with idling trains and train movements into and out of the layover facility. The second phase would include new sound sources from the train wash and wheel truing facility. The noise modeling effort associated with the detailed noise assessment accounted for the construction fleet and duration to construct the Project, as well as the number of train movements anticipated to pass through the yard, idle, and use the train wash during daytime and nighttime hours throughout operation. For construction-related impacts, the anticipated construction equipment mix and phases were used to identify potential impacts. The following assumptions were made as part of the operational detailed noise assessment.

Phase 1 Assumptions

- The typical train speed in the yard is 10 miles per hour with the speed of trains through the wash 5 miles per hour.
- Future train movements and consists (e.g., the number of locomotives and cars per train movement) is one locomotive and seven passenger cars for the Pacific Surfliner Train.
- Locomotive horn use was not included in the assessment since there are no at-grade train crossings.
- The future noise exposure would be the combination of the existing noise exposure and the additional Project-related noise exposure.
    - Train movement volumes are projected to increase in the future, with a total of two trains accessing the CCLF daily. These train movements are incorporated into the noise modeling and the Project levels are logarithmically added to the existing levels, then the difference between the cumulative with Project conditions is compared with the existing levels to identify impact conditions.
- Locomotives would idle for up to ~~45~~50-minutes prior to departure or ~~25~~30-minutes after arriving.
- Source levels for the idling locomotives were based off of measurements conducted of the Pacific Surfliner locomotive using the existing layover facility.
- Special trackwork include an addition of 5 dB per the FTA Manual.

Later Phases Assumptions

- Includes all of the Phase 1 assumptions except there would be up to four trains accessing the CCLF rather than two.
- Locomotives would idle for up to 45-minutes prior to departure, 30-minutes after arriving during daytime hours (7:00 a.m. to 10:00 p.m.) or 25-minutes after arriving during nighttime hours (10:00 p.m. to 7:00 a.m.).
-
- Trains would access the storage tracks according to the following approach to reduce community noise levels.

  - The first train of each day accessing the CCLF would use the easternmost storage track and would not use the train wash. Having the train stored on this track acts as a noise barrier reducing sound levels at sensitive land uses east of the storage facility.
  - The second train of each day accessing the CCLF would use the westernmost storage track (i.e., next to the service and inspection track) and would not use the train wash. Having the train stored on this track acts as a noise barrier reducing sound levels at sensitive land uses west of the storage facility.
  - The third train each day accessing the CCLF will go through the wash and then access the storage tracks between the easternmost and westernmost storage tracks.
  - The fourth train each day accessing the CCLF will go through the wash and then layover on the service and inspection track.
- Wash facility is included with the portals assumed to have a sound level of 74 dBA Leq (Sound Transit 2015).
- The wash facility would operate only during daytime hours.
- Wheel truing machine is expected to not exceed 85 dBA Leq for a 4 hour period to keep from potentially harming workers hearing per Occupational Safety and Health Administration. Additionally, the wheel truing machine would be located in a building to provide additional attenuation.
  - The wheel truing facility would be used infrequently for around 4 hours per day and 5 days per month.

Appendix A provides the noise model input detail for the operational rail noise analysis.

4.3.2 Three-Dimensional Predictive Model

Operational sound levels can be assessed using the FTA spreadsheet models; however, efficiencies can be gained by implementing off-the-shelf acoustic modeling software that implements the calculation methods of the FTA spreadsheets. For this assessment, the three-dimensional off-the-shelf predictive model (i.e., SoundPLAN) was used to calculate rail noise levels implementing the FTA methods for regional/intercity rail. This modeling program conforms to the FTA standard for rail noise sources. The SoundPLAN model includes an array of data inputs, such as sound sources, topography, buildings, and ground characteristics, such as paved areas and vegetated areas. The following steps were taken to implement the FTA standard for rail noise sources in SoundPLAN:

- Each train configuration and the number of train movements on a given track location were entered into SoundPLAN.
- Each source term was applied to specific rail lines based on estimates of train volumes.
- Modeling included terrain contours to capture terrain changes.
- Buildings were modeled as three-dimensional shapes to capture attenuation impacts.
- Ground type is assumed to be hard ground (i.e., acoustically reflective).

Operational noise levels were compared with the relevant noise impact criteria identified in Section 3.1. Noise levels associated with special track work, such as crossovers, were also included in this assessment for sensitive receptors.

4.3.3 Wheel/Rail Noise

There are no tight radius curves in the Project study area; therefore, wheel squeal is not a factor requiring consideration in the analysis.

4.3.4 Traffic Noise

Based on anticipated low trip generation during construction, no modeling of vehicular traffic noise during construction was undertaken as part of this analysis.

4.4 Operational Vibration

The FTA procedures for a general operational vibration assessment (as outlined in Section 6 of the FTA manual) were used for this analysis (FTA 2018). The FTA assessment procedure requires the following data:

- **Number of daily vibration events** – The number of daily events was classified as infrequent because there would be less than 30 vibration events of the same kind per day.
- **Receiver land use designation (categories specified above)** – Category 2 (for the residences) and no Category 1 or 3 land uses are present.
- **Vibration source levels** – The source levels were derived from Figure 6-4 of the FTA manual using the curve for locomotive-powered passenger or freight.
- **Distance from source to receiver (building) footprints** – The distance between the source (i.e., rail centerline) and the receiver was measured using a geographic information system.
- **Train speed, suspension, wheel condition (worn or flat-spots), and track condition** – Train speed estimates would be the same for vibration as stated for noise and the train's wheels were assumed to be in good condition (i.e., no flat spots).
- **Soil characteristics of ground between the vibration source and receiver** – Soil propagation characteristics were assumed to be normal (rather than efficient).
- **Receiver construction/foundation type and description, including whether it is fragile or extremely fragile** – Using the generalized ground surface vibration curve, the root mean square velocity level data at the receiver distance of interest were adjusted based on the factors affecting the source, factors affecting the vibration path, and factors affecting the receiver. Structure types and associated adjustments were also obtained from the FTA manual.

The potential for damage to adjacent sensitive resources because of Project-related operational vibration was analyzed in addition to the modeled noise- and vibration-sensitive receivers. Following FTA methodology, the potential for vibration damage and annoyance was assessed at sensitive land uses.

4.5 Construction Noise

Noise from construction activity is generated by the broad array of powered, noise-producing mechanical equipment used in the construction process. Examples of equipment used in the construction effort include hand-held pneumatic tools to excavators, loaders, a variety of trucks, and tie and rail handling equipment. To assess potential noise impacts from construction, this noise analysis used the methodology in Section 7 of the FTA manual (FTA 2018).

The noise exposure at a receiver location was calculated from the dB addition of all operating construction equipment using the equations and methodology described in the FTA manual (FTA 2018). For example, the attenuation rate used as a point source was 6 dB per doubling of distance. The intervening ground was assumed to be hard-surfaced; therefore, any additional reduction from ground effects was negligible. Shielding effects from intervening structures were ignored.

Construction equipment used in the analysis included compressors, welding machines, mobile cranes, front end loaders, rollers, dozers, graders, and excavators. The range in noise levels typically generated by the equipment assumed for the analysis ranges from 67 dBA L_{eq} (e.g., compressor) to 92 dBA L_{eq} (e.g., dump truck) at a distance of 50 feet, based on source levels from the Federal Highway Administration Roadway Construction Noise Model, Version 2.0 (Table 4-1). The equation (Eq. 7-1) from the FTA manual (FTA 2018) is provided below:

$$L_{eq.equip} = L_{emission} + 10\log(Adj_{Usage}) - 20\log(\frac{D}{50}) - 10G\log(\frac{D}{50}) \qquad \textbf{Eq. 7-1}$$

where:

$L_{eq,equip}$ = $L_{eq(t)}$ at a receiver from the operation of a single piece of equipment over a specified time period, dBA
$L_{emission}$ = noise emission level of the particular piece of equipment at the reference distance of 50 ft, dBA
Adj_{Usage} = usage factor to account for the fraction of time that the equipment is in use over the specified time period
D = distance from the receiver to the piece of equipment, ft
G = a constant that accounts for topography and ground effects

Ground effects were ignored in the analysis with an assumption made that propagation of construction noise occurs over flat terrain without intervening buildings providing attenuation. This assumption was made to be conservative.

Table 4-1. Typical Construction Equipment Noise Levels

Equipment/Source	Load Factor (%)	dBA L_{max} at 50 Feet
Dump Truck	40	92
Compactor	20	82

Notes:
dBA=A-weighted decibel; L_{max}=maximum sound level

4.6 Construction Vibration

To assess potential vibration impacts from construction, this analysis used the methodology contained in Section 7.2 of the FTA manual (FTA 2018). The potential for damage to structures from Project-related construction vibration was analyzed for the sensitive receivers discussed above. Vibration source levels for a variety of typical construction equipment types are outlined in Table 7-4 of the FTA manual (reproduced in this report as Table 4-2) in terms of PPV in inches per second at a

reference distance of 25 feet from the source and VdB at 25 feet (FTA 2018). For this analysis, the source of typical vibration levels for a vibratory roller (0.210 inch per second PPV) and a large bulldozer (0.089 inch per second PPV) was utilized. The equation (Equation 7-2 from the FTA Manual) used to calculate vibration levels is provided below.

$$PPV_{equip} = PPV_{ref} \times (\frac{25}{D})^{1.5} \qquad \textbf{Eq. 7-2}$$

where:

PPV_{equip} = the peak particle velocity of the equipment adjusted for distance, in/sec
PPV_{ref} = the source reference vibration level at 25 ft, in/sec
D = distance from the equipment to the receiver, ft

Table 4-2. Typical Construction Equipment Vibration Levels

Equipment/Source		PPV at 25 Feet (inch/second)	Approximate Vibration Velocity Level at 25 Feet[a]
Vibratory roller	—	0.210	94
Large bulldozer	—	0.089	87
Loaded Truck	—	0.076	86

Notes:
[a] Root mean square VdB reference 1 microinch per second
PPV=peak particle velocity; VdB=vibration decibels

5 Existing Conditions

Noise and vibration measurements were conducted to document existing conditions.

5.1 Noise Measurements

Noise measurements were conducted to identify existing sound levels throughout the analysis area and establish FTA impact thresholds. Table 5-1 provides the measured existing noise levels within the Project study area. Multiple residences are within the noise analysis study area (i.e., the screening distance of 650 feet). Due to the Project schedule, sound-level measurements occurred during COVID-19 pandemic conditions. To reduce the possibility of contracting or spreading the virus, measurements were completed from public ROWs that were representative of noise sensitive areas in the Project analysis area. Measurements at noise-sensitive land uses were taken on October 6 and 7, 2020. Appendix B provides the calibration sheets for the equipment used in the monitoring effort. Figure 5-1 is a map of the monitoring locations. The measured sound levels were assigned to each individual noise sensitive receptor analysis point and adjusted for distance from the dominant noise source such as the railroad corridor or major roadways. Attenuation effects from the presence of buildings were also included in the adjustments. These adjustments were completed following the procedures provided in the FTA manual.

Table 5-1. Existing Noise Levels

Site Identification	Location	Noise Levels (dBA)	
		L_{dn}	L_{eq} (peak hour)
ML-1	2220 Emily Street (apartment building)	52	56
ML-2	881 Francis Ave (single-family home)	48	56
ML-3	2125 Rachel Street (single-family home)	48	53
ML-4	1011 San Carlos Dr (single-family home)	52	62
ML-5	SLO Railroad Safety Trailhead at the southern end of Boulevard Del Campo	42	47

Notes:
dBA=A-weighted decibel; L_{dn}=day-night average sound level; L_{eq}=equivalent noise level; ROW=right-of-way

Figure 5-1. Noise and Vibration Measurement Locations

5.1.1 Monitoring Location – 1

Monitoring location 1 (ML-1) was located east of the southernmost building in the Roundhouse Place Apartments along the railroad right-of-way fence line, see Figure 5-1. The measurement was completed using Option 2 from the FTA Manual, which included deploying a noise monitor for at least 24-hours, and in this case, left out unattended. Monitoring began on October 6, 2020 and ended on October 7, 2020. A Brüel and Kjær 2270 meter was calibrated before and after the measurement to ensure that it operated within tolerances. The microphone was affixed to a tripod and positioned at a height of approximately 5 feet above the ground. Several observed sounds could be heard, including train wheels as they operate on the track, train bells, and roadway traffic noise. Secondary observed sound sources included periodic sounds of bird chirping. Figure 5-1 and Figure 5-2 are pictures of ML-1. The results of monitoring at the ML-1 were 52 dBA Ldn and 56 dBA Leq (peak daytime hour).

Figure 5-2. Monitoring Location 1 – Noise Meter Location

Figure 5-3. Monitoring Location 1 – Noise Meter Location

This page is intentionally blank.

5.1.2 Monitoring Location – 2

Monitoring location 2 (ML-2) was completed at the end of Francis Avenue, near a residence at 881 Francis Avenue, at approximately the same distance from the tracks as the residence, see Figure 5-1. The measurement was completed using Option 3 which involves conducting three 1-hour measurements during peak hour (roadway traffic noise peak), midday (off-peak), and late night (12:00 a.m. to 4:00 a.m.) from the FTA Manual. Measurements were completed on October 6, 2020 and October 7, 2020. A Brüel and Kjær 2245 meter was calibrated before and after the measurement to ensure that it operated within tolerances. The sound-level meter was affixed to a tripod with the microphone positioned at a height of approximately 5 feet above the ground (Figure 5-3 and Figure 5-4). Several observed sounds could be heard, including rolling trains, train bells, and their wheels on the track. Secondary sources of noise included roadway traffic and occasional birds. The results of the measurement effort were 48 dBA Ldn and 56 dBA Leq (daytime peak).

5.1.3 Monitoring Location – 3

Monitoring location 3 (ML-3) was located northeast of the SLO Safety Trail and southwest of a home located 2125 Rachel Street along the trail right-of-way, see Figure 5-1. The measurement was completed using Option 2 from the FTA Manual, which included deploying a noise monitor for at least 24-hours, and in this case, left out unattended. Monitoring began on October 6, 2020 and ended on October 7, 2020. A Brüel and Kjær 2270 meter was calibrated before and after the measurement to ensure that it operated within tolerances. The microphone was affixed to a tripod and positioned at a height of approximately 5 feet above the ground. Several observed sounds could be heard, including train wheels as they operate on the track, train bells, local roadway traffic noise. Secondary observed sound sources included periodic sounds of bird chirping. Figure 5-6 and Figure 5-7 are pictures of ML-3. The results of the measurement effort were 48 dBA Ldn and 53 dBA Leq (daytime peak hour).

Figure 5-6. Monitoring Location 3 – Noise Meter Location

This page is intentionally blank.

Figure 5-7. Monitoring Location 3 – Noise Meter Location

This page is intentionally blank.

5.1.4 Monitoring Location – 4

Monitoring location 4 (ML-4) was completed at a residence near the intersection of Bushnell Street and San Carlos Drive, at approximately the same distance from the tracks as the residence, see Figure 5-1. The measurement was completed using Option 3 from the FTA Manual. Measurements were completed on October 6, 2020 and October 7, 2020. A Brüel and Kjær 2245 meter was calibrated before and after the measurement to ensure that it operated within tolerances. The sound-level meter was affixed to a tripod with the microphone positioned at a height of approximately 5 feet above the ground (Figure 5-8 and Figure 5-9). Several observed sounds could be heard, including rolling trains, train bells, and their wheels on the track. Secondary sources of noise included roadway traffic and occasional birds. Results of the measurement effort were 52 dBA Ldn and 62 dBA Leq (daytime peak hour).

Figure 5-8. Monitoring Location 4 – Noise Meter Location

This page is intentionally blank.

Figure 5-9. Monitoring Location 4 – Noise Meter Location

This page is intentionally blank.

5.1.5 Monitoring Location – 5

Monitoring location 5 (ML-5) was completed at the trail head at the end of Boulevard Del Campo at a distance roughly the same as the residences located across from the trail head, see Figure 5-1. The measurement was completed using Option 3 from the FTA Manual. Measurements were completed on October 6, 2020 and October 7, 2020. A Brüel and Kjær 2245 meter was calibrated before and after the measurement to ensure that it operated within tolerances. The sound-level meter was affixed to a tripod with the microphone positioned at a height of approximately 5 feet above the ground (Figure 5-10 and Figure 5-11). Several observed sounds could be heard, including rolling trains, train bells, and their wheels on the track. Secondary sources of noise included roadway traffic and occasional birds. Results of the measurement effort were 42 dBA Ldn and 47 dBA Leq (daytime peak hour).

Figure 5-11. Monitoring Location 5 – Noise Meter Location

This page is intentionally blank.

5.2 Vibration Measurements

Vibration measurements were completed to document vibration levels from existing train pass-by events. Measurements were completed with Brüel and Kjær 2270 data loggers paired with seismic accelerometers. Appendix B includes monitoring equipment calibration sheets. The measurement data was used to confirm that the locomotive curve in the FTA manual was appropriate for use in the analysis. An array of vibration sensors was set up near the noise monitoring location ML-1 on October 6, 2020, at distances of 63 feet, 88 feet, 188 feet, and 263 feet from the existing track. On October 7, 2020, the vibration array was redeployed at ML-4 at distances of 25 feet, 50 feet, 175 feet, and 223 feet. Table 5-2 provides the vibration measurement results. When normalized to 50 miles per hour the monitored levels are generally 2 VdB lower than the passenger train diesel locomotive curves in the FTA manual. Therefore, use of the locomotive curve in the FTA manual is considered conservative for assessing vibration impacts.

Table 5-2. Existing Vibration Levels

Location	Train Pass-by Event	Speed (miles per hour)	Distance from Existing Track (feet)	Measured VdB
ML-1	Amtrak Surfliner	15	63	70
			88	64
			188	61
			263	57
ML-4	Amtrak Surfliner	15	25	73
			50	68
			175	66
			223	62

Notes:
VdB=Vibration decibels

6 California Environmental Quality Act Thresholds of Significance

For the purposes of this noise and vibration study, the Project would have a significant impact on noise and vibration if:

A. Project construction and operation would generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

B. Project construction and operation would generate excessive groundborne vibration or groundborne noise levels.

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, the Project would expose people residing or working in the Project study area to excessive noise levels.

These thresholds of significance are considered in the noise and vibration impact assessment.

6.1 Issues Requiring No Further Consideration

Threshold C. The Project site is located approximately 1.60 miles north of the San Luis Obispo County Regional Airport. According to Figure 4-1: San Luis Obispo County Regional Airport Noise Contours of the San Luis Obispo County Regional Airport –Airport Land Use Plan, the Project site is not located within any airport noise impact contours (RS&H 2021). Therefore, the proposed Project would not expose residents or workers to excessive noise levels from airport or private air strip operations and no impact would occur. No further discussion is required.

This page is intentionally blank.

7 Noise- and Vibration-Sensitive Land Uses and Sensitive Receptors

The following discussion provides a description of the noise- and vibration-sensitive land uses where sensitive receptors (Category 2 and 3 land uses) in the Project study area occur. The receiver locations are used for predictions and either represent an individual sensitive receptor or a cluster of sensitive receptors, which is consistent with the FTA guidance and regulations. The noise analysis area includes those noise-sensitive areas within screening distance (1,000-feet unobstructed and 650-feet obstructed) of the Project. The 650-foot screening distance applies to the Project since existing first row buildings are present. Additionally, because vibration attenuates more quickly with distance, the vibration analysis area is substantially smaller; therefore, it includes only those vibration-sensitive land uses and structures within 200 feet of the Project.

Noise- and vibration-sensitive land uses include single-family and multi-family residential areas. No schools or other Category 3 (such as parks where passive use occurs) land uses are located within the analysis area.

This page is intentionally blank.

8 Environmental Impacts

8.1 Operational Noise

CRITERIA A	Generation of a substantial permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

8.1.1 Phase 1

The results of the rail noise impact assessment for Phase 1 are summarized in Table 8-1 and the locations are depicted on Figure 8-1. For the future Project conditions, the Project would introduce new sources of noise where there presently are none, specifically train movements on two tracks and idling locomotives. The new sources of noise would increase noise levels in the analysis area. As shown in Table 8-1, the Project is predicted to result in no severe impacts and moderate impacts at ~~35~~40 Category 2 land uses (residences) in the absence of mitigation.

Table 8-1. Project Operational Noise Conditions

Impact Type	Number of Category 2 Land Use Impacts
Severe	0
Moderate	~~35~~40*
No impact	*28~~8~~4*

*Note: * See Table 8-2 for the noise calculation results at moderately impacted receptors.*

Moderate impacts would occur throughout the neighborhood north of the proposed layover facility in part because of idling trains. The moderate impacts are considered significant in the absence of mitigation. Moderately impacted receptor noise levels are provided in Table 8-2. Section 9 identifies mitigation measures that would minimize and/or avoid these impacts. Detailed noise calculation results at all receptors are provided in Appendix C.

Table 8-2. Phase 1 Operational Noise Impacts

Receptor	Land Use Category	Units	Existing L_{dn}/L_{eq}	Impact Threshold		Proposed Project (L_{dn}/L_{eq})	Proposed Project Cumulative (L_{dn}/L_{eq})	Increase (dB)	Impact Category

8.1.2 Later Phases

The results of the rail noise impact assessment for the Later Phases condition are summarized in Table 8-3 and the locations are depicted on Figure 8-2. For the future Project conditions, the Project would introduce new sources of noise where there presently are none, specifically train movements, idling locomotives, the train wash and wheel truing facility. The wheel truing facility and the train wash would not be present in Phase 1, nor would the building that house these components of the CCLF. The new sources of noise would increase noise levels in the analysis area. As shown in Table 8-3, the Project is predicted to result in no severe impacts and moderate impacts at ~~44~~55 Category 2 land uses (residences) in the absence of mitigation.

Table 8-3. Later Phases - Project Operational Noise Conditions

Impact Type	Number of Category 2 Land Use Impacts
Severe	0
Moderate	~~44~~55*
No impact	2~~79~~68

*Note: * See* Table 8-4 *for the noise calculation results at moderately impacted receptors.*

The moderate impacts are predicted at single-family residences north of the Project and at a multi-family apartment building to the south. Moderate impacts would also occur throughout the neighborhood north of the proposed maintenance facility. The moderate impacts are considered significant in the absence of mitigation. Moderately impacted receptor noise levels are provided in Table 8-4. Section 9 identifies mitigation measures that would minimize and/or avoid these impacts. Detailed noise calculation results at all receptors are provided in Appendix C.

Table 8-4. Later Phases Operational Noise Impacts

8.2 Operational Vibration

CRITERION B	Exposure of persons to, or generation of, excessive ground-borne vibration or ground-borne noise levels during operations?

Vibration levels were predicted for operation of the Project. The Project corridor would be characterized as one that is infrequently used, per FTA. Project vibration levels are evaluated against the FTA criteria for infrequently used railroad lines (80 VdB). The analysis evaluated the Later Phases conditions because this has the highest potential for vibration impacts since trains would operate in closest proximity to sensitive structures.

Under the Later Phases operational scenario, no vibration impacts are predicted from the Project based on the vibration. Table 8-5 provides the predicted vibration levels for the sensitive areas with the highest predicted levels based on the proposed track configuration for the Project. As shown in Table 8-5, Project vibration would not exceed FTA's criteria.

Ground-borne noise levels are assumed to be 35 dB lower than ground-borne vibration levels analyzed per the FTA Manual for the Project. Applying this adjustment results in a maximum ground-borne noise level of 33 dBA, a level that is lower than the FTA impact criteria of 43 dBA. This demonstrates that there would be no ground-borne noise impacts from the Project.

Table 8-5. Operational Ground-borne Vibration and Noise Results

Receptor	FTA Category	Impact Threshold	Distance (feet)	Speed (mph)	VdB Base Curve	Speed Adjustment	Special Trackwork Adjustment	Building Adjustment	VdB Adjusted	Impact

8.3 Construction Noise

CRITERIA C	Generation of a substantial temporary increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction noise levels were predicted using each piece of equipment planned for each phase and subphase of construction. The maximum equipment noise levels (L_{max}) at 50 feet, obtained from the Federal Highway Administration's Roadway Construction Noise Model 2.0, were used in the predictions.

Project construction would be conducted during daytime hours. As stipulated in the City's code, LOSSAN and the Project are exempted from the City's code since it is a Project by a state-run agency. In the absence of numerical limits at the local level applicable to the Project, a construction noise impact would occur if construction noise exceeds the FTA guideline of 80 dBA L_{eq}. The 10 receptors with the highest predicted construction noise levels are provided in Table 8-6. The range of predicted construction noise levels are provided in Table 8-7. Exceedances of the FTA daytime guideline would occur at 3 receptors and would be significant absent mitigation. Construction noise mitigation is described in Section 9.2. Figure 8-3 is a map that shows where the construction noise impacts would be located.

Table 8-6. Construction Noise Results

Receptor	Distance to Construction (feet)	FTA Daytime Guideline (dBA Leq)	Highest Construction Noise Level (dBA Leq) any Phase	Impact (Yes/No)

8.4 Construction Vibration

CRITERION D	Exposure of persons to, or generation of, excessive ground-borne vibration or ground-borne noise levels during construction?

Vibration levels were analyzed at sensitive-receptor locations within the screening distances of the Project. To be conservative, the vibration-damage analysis assumes the most vibration-sensitive structures are FTA Category III structures, which are nonengineered timber and masonry buildings (Table 3-2). For vibration annoyance, the land use category most sensitive to construction vibration includes places where people typically sleep, such as residences.

Construction of the Project includes activities that have the potential to cause construction vibration impacts. These activities include the use of vibratory rollers and bulldozers to place track ballast and lay down railroad ties and tracks. Out of the two main pieces of equipment, vibratory rollers produce the highest levels of vibration; therefore, Category III structures located within 25 feet of vibratory roller activities would be the most susceptible to vibration damage impacts. However, based on the existing setback between these Category III structure locations and the proposed Project, the highest vibration levels are predicted at 0.018 PPV at the nearest receptor to construction. This level is below the damage impact criteria; therefore, no significant damage impact is predicted from the Project.

Vibration annoyance predictions were also calculated at each receptor and assessed against the threshold for Category 2 uses of 80 VdB because construction vibration would not be present in any location for extended periods of time. Construction vibration annoyances can be anticipated at sensitive receptors located within approximately 73 feet of the proposed construction. The closest sensitive receptor is located 130-feet from construction; therefore, no significant impacts are predicted. Table 8-8 provides results of the construction vibration analysis at all receptors analyzed.

9 Mitigation

9.1 Operational Noise Mitigation

Moderate impacts are predicted under Phase 1 and Later Phases operation of the Project. FTA's guidance requires that mitigation be strongly considered for severe impacts and considered for moderate impacts.

LOSSAN does not have a formal noise mitigation policy; however, their goal is to substantially reduce noise levels at severe impacts and implement noise mitigation at moderate impacts where feasible and reasonable. The following are considered by LOSSAN when determining whether noise mitigation for moderate impacts is feasible and reasonable for implementation in a project:

- **The number of noise-sensitive receptors impacted –** Clusters of impacts in a given location increase the likelihood that noise mitigation would be considered feasible and cost reasonable on a per receptor basis. LOSSAN follows the California Department of Transportation noise policy for identifying if mitigation is feasible and cost reasonable (California Department of Transportation 2020).
- **Effectiveness of a mitigation measure -** Mitigation is feasible if it achieves a 5 dB reduction at impacted receptors
    - A receptor is considered benefitted if a 5 dB reduction is achieved by a mitigation measure at a receptor whether it is impacted or not.
- **Implementation costs –** Mitigation is cost reasonable if the noise mitigation measure on a per receptor basis is less than the amount allotted for mitigation for each receptor.
- **The predicted increase over existing noise levels –** Increases in noise levels of 5 dB and greater are generally noticeable to average human hearing and 10-dB increases are perceived as a doubling in noise. Changes of 3 dB or less are generally not perceptible to average human hearing; therefore, for mitigation to be considered, an increase of at least 3 dB is required.
- **Community opinions on the mitigation measure –** If more than 50 percent of the benefitted receptors vote to implement a feasible mitigation measure, it is considered reasonable for an area that shares a given mitigation measure. For example, if a noise wall is under consideration for a series of impacted receptors in a neighborhood, more than 50 percent of the benefitted receptors behind the sound wall would need to approve of the mitigation measure for it to be implemented. Voting typically occurs during final design.

Implementation of the following mitigation measures would reduce the potentially significant impacts as a result of Project operation to a level less than significant.

NV-1 **Operational Restrictions.** LOSSAN is committed to developing the facility operational plan with the following approaches to ensure community noise is reduced:

- Under the Phase 1 operations ~~C~~connect to ground power within ~~15~~30-minutes of arrival at the facility to reduce noise from idling locomotives.
- Under the Phase 1 operations ~~D~~disconnect from ground power no sooner than ~~15~~50-minutes prior to reduce noise from idling locomotives.
- Under the Later Phases operations connect to ground power within 30-minutes of daytime (7:00 a.m. to 10:00 p.m.) arrivals and within 25-minutes of nighttime (10:00 p.m. to 7:00 a.m.) arrivals at the facility to reduce noise from idling locomotives.
- Under the Phase 1 operations disconnect from ground power no sooner than 50-minutes prior to reduce noise from idling locomotives.
- Under the Later Phases operations disconnect from ground power no sooner than 45-minutes prior to reduce noise from idling locomotives.
- ~~—~~
- Under the ~~the later phases~~Later Phases of the project trains will access storage tracks using the following approach: The first train of each day accessing the CCLF would use the easternmost storage track and would not use the train wash. Having the train stored on this track acts as a noise barrier reducing sound levels at sensitive land uses east of the storage facility.
    - The second train of each day accessing the CCLF will use the westernmost storage track (i.e., next to the service and inspection track) and will not use the train wash. Having the train stored on this track acts as a noise barrier reducing sound levels at sensitive land uses west of the storage facility.
    - The third train each day accessing the CCLF will go through the wash and then access the storage tracks between the easternmost and westernmost storage tracks.
    - The fourth train each day accessing the CCLF will go through the wash and then layover on the service and inspection track. In this way it will act as a barrier blocking noise from other train movements and noise sources reducing sound levels at sensitive land uses east of the storage facility.

9.2 Construction Noise Mitigation

General Project construction noise and vibration would exceed the FTA's construction guidelines at receptors nearest to the construction efforts. The Project would implement the following mitigation to reduce construction-related noise levels:

NV-2 **Employ noise- and vibration-reducing measures during construction.** The construction contractor will employ measures to minimize and reduce construction noise. Noise reduction measures that will be implemented include, but are not limited to, the following:

- Place site equipment on the construction site as far away from noise sensitive sites as possible.
- Combine noisy operations to have them occur in the same time period.
    - The total noise level produced would not be significantly greater than the level produced if the operations were performed separately.
- Nighttime construction will not be allowed.
- Use specially quieted equipment, such as quieted and enclosed air compressors and properly working mufflers on all engines.
- Select quieter demolition methods, where feasible.

NV-3 **Prepare a community notification plan for Project construction.** To proactively address community concerns related to construction noise, prior to construction, the LOSSAN Rail Corridor Agency and/or the construction contractor will prepare and maintain a community notification plan. Components of the plan will include initial information packets prepared and mailed to all residences within a 500-foot radius of Project construction. Updates to the plan will be prepared as necessary to indicate changes to the construction schedule or other processes. The LOSSAN Rail Corridor Agency will identify a Project liaison to be available to respond to questions from the community or other interested groups.

9.3 Impacts after Mitigation

9.3.1 Operational Noise

Mitigation is strongly recommended for severe impacts and considered for the moderate operational noise impacts, per FTA. Operational adjustments at the facility would reduce noise levels at remaining moderate impacts. For these reasons, after mitigation, these impacts would be less than significant. No long-term significant impacts would result with the proposed mitigation.

9.3.2 Construction

With implementation of the construction noise mitigation measures, including restricting the loudest activities to daytime periods, noise levels would be maintained below the FTA guideline. By

implementing the noise reduction measures and compliance monitoring, no residual significant impact would remain.

Appendix B. Monitoring Equipment Calibration Certificates

This page is intentionally blank.

Brüel & Kjær

MANUFACTURER'S CERTIFICATE OF CONFORMANCE

We certify that Brüel & Kjær **-2245---** Serial No. **2245-100486** has been tested and passed all production tests, confirming compliance with the manufacturer's published specification at the date of the test.

The final test has been performed using calibrated equipment, traceable to national or international standards or by ratio measurements.

Brüel & Kjær is certified under ISO 9001 assuring that all test data is retained on file and is available for inspection upon request.

Nærum 29-apr-2020

Torben Bjørn
Vice President, Operations

Please note that this document is not a calibration certificate.
For information on our calibration services please go to www.bksv.com/service.

NVLAP®
CALIBRATION
NVLAP Lab Code: 200625-0

Calibration Certificate No.44462

Instrument: **Sound Level Meter**
Model: **2270**
Manufacturer: **Brüel and Kjær**
Serial number: **3024993_KIT#6**
Tested with: **Microphone** 4189 s/n 2616507, 4189 s/n 3180986
Preamplifier ZC0032 s/n 18967, ZC0032 s/n 29417
Type (class): **1**
Customer: **Harris Miller Miller & Hanson Inc.**
Tel/Fax: **781-229-0707 x3148 / 781-859-8940**

Date Calibrated: **3/10/2020** *Cal Due:*

Status:	Received	Sent
In tolerance:	X	X
Out of tolerance:		
See comments:		

Contains non-accredited tests: __Yes X No
Calibration service: __ Basic X Standard

Address: **700 District Avenue, Suite 800, Burlington, MA 01803**

Tested in accordance with the following procedures and standards:
Calibration of Sound Level Meters, Scantek Inc., Rev. 6/26/2015
SLM & Dosimeters – Acoustical Tests, Scantek Inc., Rev. 7/6/2011

Instrumentation used for calibration: Nor-1504 Norsonic Test System:

Instrument - Manufacturer	Description	S/N	Cal. Date	Traceability evidence Cal. Lab / Accreditation	Cal. Due
