

Widen I-5 and I-405 in All Sections, Emphasizing High Occupancy Toll (HOT) Lanes

Freeway System

Objective:

Add more lanes to the freeway system in order to relieve existing and future freeway congestion. Allow single-occupant vehicles to buy their way in to the new lanes through the use of a toll. Address interchange deficiencies throughout the study area.

Proposed Transportation Features:

- ❖ Add additional lanes and convert the existing HOV lanes to provide a system of two HOT lanes in each direction on I-5 and I-405 (similar to the SR-91 Express Lanes).
- ❖ Provide ingress and egress to the HOT lanes at selected locations.
- ❖ Allow high occupancy vehicles to travel for free or at a lesser price.
- ❖ In addition, add general purpose lanes to some sections of I-5 and I-405.
- ❖ Provide interchange improvements in most locations.
- ❖ Include a northbound Truck Climbing Lane in the vicinity of Avenida Pico.
